

ATLAS OVER DANMARK

ATLAS OF DENMARK

SERIES I, VOLUME 3
THE DANISH SOIL CLASSIFICATION

Authors:

Henrik Breuning Madsen, Axel Henry Nørr, Kristian Aagaard Holst

Published by:

The Royal Danish Geographical Society

supported by

The Danish State, The Carlsberg Foundation, and private companies

Rosendahl Press

By Commission: C.A. Reitzel, Copenhagen 1992

TABLE OF CONTENTS

CHAPTER 1: A Historical Review of Soil Surveying and Land Value Assessment in Denmark	1	CHAPTER 2: The Danish Soil Classification	16
The First Land Registers with Land as a Taxation Basis		Agricultural Soil A Limited Resource	
<i>The Plough Tax</i>		The Basis of the Danish Soil Classification	
<i>Amount of Seed</i>		The Primary Data Collection	
<i>Gold Value</i>		<i>Defining the Area to be Classified</i>	17
<i>The Introduction of Yield Potential as a Land Assessment Basis during the Late Middle Ages</i>		<i>Sampling</i>	
The Land Registers of the 1660's		<i>Soil Analysis</i>	
<i>The Commissioners' Land Register of 1660-62</i>		A Description of the Soil Maps	20
<i>The County Clerks' Land Register of 1664</i>		Data storage	
King Christian V's Great Danish Land Register of 1688		CHAPTER 3: Updating and Improving the Danish Soil Classification	25
<i>Land Assessment on the Danish Islands</i>		Maps	
<i>Land Assessment in Jutland</i>	2	<i>Landscape Types</i>	
<i>The Results of the 1688 Land Assessment</i>		<i>Subsoil texture</i>	
Land Assessment in the 18th Century	3	<i>Wetlands</i>	27
<i>The Land Register Project of 1768-72</i>		<i>Slope factors</i>	
<i>Land Assessment during the Enclosure and Land Redistribution Movements of the Late Eighteenth Century</i>		Soil Profile Investigations	
The Great Danish Land Register of 1844		<i>Fieldwork and Analysis</i>	33
<i>Trial Land Assessment in Roskilde County, Zealand</i>		<i>Data Storage and Results</i>	
<i>Fixing the Land Assessment Soil Quality Scale</i>	5	Mapping the Potentially Acid Sulfate Soils	35
<i>The Practical Work of the Land Assessment</i>		<i>Fieldwork</i>	
<i>Fixing Exemplary Soil Values for the Land Redistribution and Parcelling Out Procedures</i>		<i>Analytical Methods and Classification</i>	
<i>The Completion of the National Land Assessment</i>	6	<i>Regional divisions and the Area Report</i>	
<i>Calculating the New "Hartkorn" Values</i>		CHAPTER 4: Thematic Maps based on the Primary Data of the Danish Soil Classification	39
The Land Assessment of the Duchies of Schleswig and Holstein, and the Baltic Sea island of Bornholm	11	Mapping the Available Water Content in the Root Zone for Different Crops	
<i>The German Land Tax System used in Southern Jutland</i>		<i>The Construction of the Soil Profiles</i>	
<i>The Danish Island of Bornholm</i>		<i>The Calculation of the Available Water Content of Soil Layers</i>	
<i>Land Assessment in connection with Land Redistribution and Parcelling Out of Farmland Properties</i>		<i>The Effective Root Depth of Crops</i>	40
The 1949 Land Assessment Commission		<i>The Results</i>	43
<i>The Creation of a New Land Assessment System</i>	12	Mapping Irrigation Needs	45
<i>The Land Assessment of Areas with Well-drained Soils</i>		<i>The Irrigation Model</i>	
<i>The Land Assessment of the Wetlands</i>		<i>Climatic Data</i>	
<i>Fixing the Trial Land Assessment Values for Local Districts values</i>	13	<i>The Leaf Area Index</i>	
A Short Account of Other Soil Mapping Activities in Denmark		<i>Soil Water Storage Capacity</i>	
<i>Small Scale Mapping</i>		<i>Irrigation Strategy</i>	46
<i>Mapping the Surface Geology of Denmark</i>	15	<i>Results</i>	
<i>Mapping the Tønder Saltmarsh, South Jutland County</i>		Mapping the Drainage Needs of the Danish Farmland	50
		<i>Recipient and Texturally dependent Drainage Requirements</i>	
		<i>Methods and Materials used for Mapping Potential Drainage Requirements</i>	
		<i>The Questionnaire Survey</i>	
		<i>Pedological Investigations</i>	51
		<i>Fixing Values to Classify the Potential Drainage Requirement</i>	
		<i>National Potential Drainage Requirements</i>	
		Mapping the Potentially Marginal Land in Denmark based on Physical Factors	53
		<i>The Wetlands</i>	
		<i>Areas of Well-drained Soils</i>	
		<i>Sloping Terrain</i>	
		Latest Developments within the Danish Soil Classification
