

Giovanni Ferraro

The Rise and Development  
of the Theory of Series up to the  
Early 1820s

 Springer

# Contents

<b>I</b>	<b>From the beginnings of the 17th century to about 1720: Convergence and formal manipulation . . . .</b>	<b>1</b>
1	Series before the rise of the calculus . . . . .	3
2	Geometrical quantities and series in Leibniz . . . . .	25
2.1	The capacity of series to express quantities and their manipulation . . . . .	25
2.2	Power series . . . . .	36
3	The Bernoulli series and Leibniz's analogy . . . . .	45
4	Newton's method of series . . . . .	53
4.1	The expansion of quantities into convergent series . . . . .	54
4.2	On Newton's manipulations of power series . . . . .	67
5	Jacob Bernoulli's treatise on series . . . . .	79
6	The Taylor series . . . . .	87
7	Quantities and their representations . . . . .	93
7.1	Quantity and abstract quantity . . . . .	93
7.2	Continuous quantities, numbers and fictitious quantities . . .	100
8	The formal-quantitative theory of series . . . . .	115
9	The first appearance of divergent series . . . . .	121
<b>II</b>	<b>From the 1720s to the 1760s: The development of a more formal conception . . . . .</b>	<b>131</b>
10	De Moivre's recurrent series and Bernoulli's method . .	133
11	Acceleration of series and Stirling's series . . . . .	141
12	Maclaurin's contribution . . . . .	147
13	The young Euler between innovation and tradition . . . .	155
13.1	The search for the general term . . . . .	155
13.2	Analytical and synthetical methods in series theory . . . . .	160
13.3	The manipulation of the harmonic series and infinite equations . . . . .	165

14 Euler's derivation of the Euler–Maclaurin summation formula . . . . .	171
15 On the sum of an asymptotic series . . . . .	181
16 Infinite products and continued fractions . . . . .	185
17 Series and number theory . . . . .	193
18 Analysis after the 1740s . . . . .	201
18.1 Eighteenth-century analysis as nonfigural and symbolic investigation of the real . . . . .	201
18.2 Functions, relations, and analytical expressions . . . . .	205
18.3 On the continuity of curves and functions . . . . .	211
19 The formal concept of series . . . . .	215
19.1 Criticisms to the infinite extension of finite rules . . . . .	215
19.2 The impossibility of the quantitative approach . . . . .	219
19.3 Euler's definition of the sum . . . . .	222
<b>III The theory of series after 1760: Successes and problems of the triumphant formalism . . . . .</b>	<b>231</b>
20 Lagrange inversion theorem . . . . .	233
21 Toward the calculus of operations . . . . .	239
22 Laplace's calculus of generating functions . . . . .	245
23 The problem of analytical representation of nonelementary quantities . . . . .	251
24 Inexplicable functions . . . . .	257
25 Integration and functions . . . . .	263
26 Series and differential equations . . . . .	267
27 Trigonometric series . . . . .	275
28 Further developments of the formal theory of series . . . . .	283
29 Attempts to introduce new transcendental functions . . . . .	297
30 D'Alembert and Lagrange and the inequality technique . . . . .	303

IV	The decline of the formal theory of series . . . . .	311
31	Fourier and Fourier series . . . . .	315
32	Gauss and the hypergeometric series . . . . .	323
33	Cauchy's rejection of the 18th-century theory of series .	347
	References . . . . .	363
	Author index . . . . .	383
	Subject index . . . . .	387
