CONTENTS

Foreword	vii
<i>John Pierce</i>	
Preface	ix
Contributors	xi
1 Classical Strain Improvement	1
<i>Nathan Crook and Hal S. Alper</i>	
2 Tracer-Based Analysis of Metabolic Flux Networks	35
<i>Michael Dauner</i>	
3 Integration of “Omics” Data with Genome-Scale Metabolic Models	77
<i>Stephen Van Dien, Priti Pharkya, and Robin Osterhout</i>	
4 Strain Improvement via Evolutionary Engineering	111
<i>Byoungjin Kim, Jing Du, and Huimin Zhao</i>	
5 Rapid Fermentation Process Development and Optimization	133
<i>Jun Sun and Lawrence Chew</i>	
6 The Clavulanic Acid Strain Improvement Program at DSM Anti-Infectives	169
<i>Bert Koekman and Marcus Hans</i>	

7	Metabolic Engineering of Recombinant <i>E. coli</i> for the Production of 3-Hydroxypropionate	185
	<i>Tanya Warnecke Lipscomb, Matthew L. Lipscomb, Ryan T. Gill, and Michael D. Lynch</i>	
8	Complex System Engineering: A Case Study for an Unsequenced Microalga	201
	<i>Michael T. Guarnieri, Lieve M.L. Laurens, Eric P. Knoshaug, Yat-Chen Chou, Bryon S. Donohoe, and Philip T. Pienkos</i>	
9	Meiotic Recombination-Based Genome Shuffling of <i>Saccharomyces Cerevisiae</i> and <i>Schefferomyces Stiptis</i> for Increased Inhibitor Tolerance to Lignocellulosic Substrate Toxicity	233
	<i>Dominic Pinel and Vincent J.J. Martin</i>	
	Index	251
