## 1. Introduction to Energy Usage, Cost, and Efficiency 1

---

|     |   |    |
|-----|---|----|
| 1.1 | Energy Utilization in the United States                 | 1  |
| 1.2 | The Cost of Energy                                      | 1  |
| 1.3 | Energy Efficiency                                       | 4  |
| 1.4 | The Cost of Self-Generated versus Purchased Electricity | 10 |
| 1.5 | The Cost of Fuel and Fuel Heating Value                 | 11 |
| 1.6 | Text Organization                                       | 12 |
| 1.7 | Getting Started   | 15 |
| 1.8 | Closing Comments  | 16 |
|     | References  | 16 |
|     | Problems  | 17 |

## 2. Engineering Economics with VBA Procedures 19

---

|       |   |    |
|-------|---|----|
| 2.1   | Introduction to Engineering Economics   | 19 |
| 2.2   | The Time Value of Money: Present Value ( <i>PV</i> ) and Future Value ( <i>FV</i> ) | 19 |
| 2.3   | Annuities   | 22 |
| 2.4   | Comparing Process Alternatives  | 29 |
| 2.4.1 | Present Value   | 31 |
| 2.4.2 | Rate of Return (ROR)  | 31 |
| 2.4.3 | Equivalent Annual Cost/Annual Capital Recovery Factor (CRF)                         | 32 |
| 2.5   | Plant Design Economics  | 33 |
| 2.6   | Formulating Economics-Based Energy Optimization Problems                            | 34 |
| 2.7   | Economic Analysis with Uncertainty: Monte Carlo Simulation                          | 36 |
| 2.8   | Closing Comments  | 38 |

|            |    |
|------------|----|
| References | 39 |
| Problems   | 39 |

## 3. Computer-Aided Solutions of Process Material Balances: The Sequential Modular Solution Approach 42

---

|       |  |    |
|-------|--|----|
| 3.1   | Elementary Material Balance Modules  | 42 |
| 3.1.1 | Mixer  | 43 |
| 3.1.2 | Separator  | 43 |
| 3.1.3 | Splitter   | 44 |
| 3.1.4 | Reactors   | 45 |
| 3.2   | Sequential Modular Approach: Material Balances with Recycle                              | 46 |
| 3.3   | Understanding Tear Stream Iteration Methods  | 49 |
| 3.3.1 | Single-Variable Successive Substitution Method   | 49 |
| 3.3.2 | Multidimensional Successive Substitution Method  | 50 |
| 3.3.3 | Single-Variable Wegstein Method  | 52 |
| 3.3.4 | Multidimensional Wegstein Method   | 53 |
| 3.4   | Material Balance Problems with Alternative Specifications                                | 58 |
| 3.5   | Single-Variable Optimization Problems  | 61 |
| 3.5.1 | Forming the Objective Function for Single-Variable Constrained Material Balance Problems | 61 |
| 3.5.2 | Bounding Step or Bounding Phase: Swann's Equation  | 61 |
| 3.5.3 | Interval Refinement Phase: Interval Halving  | 65 |
| 3.6   | Material Balance Problems with Local Nonlinear Specifications                            | 66 |
| 3.7   | Closing Comments   | 68 |
|       | References   | 69 |
|       | Problems   | 70 |

|   |           |  |            |
|---|-----------|--|------------|
| <b>4. Computer-Aided Solutions of Process Material Balances: The Simultaneous Solution Approach</b>                       | <b>76</b> | <b>6. Introduction to Data Reconciliation and Gross Error Detection</b>  | <b>132</b> |
| 4.1 Solution of Linear Equation Sets: The Simultaneous Approach   | 76        | 6.1 Standard Deviation and Probability Density Functions   | 133        |
| 4.1.1 The Gauss–Jordan Matrix Elimination Method  | 76        | 6.2 Data Reconciliation: Excel Solver  | 136        |
| 4.1.2 Gauss–Jordan Coding Strategy for Linear Equation Sets   | 78        | 6.2.1 Single-Unit Material Balance: Excel Solver   | 136        |
| 4.1.3 Linear Material Balance Problems: Natural Specifications  | 78        | 6.2.2 Multiple-Unit Material Balance: Excel Solver   | 138        |
| 4.1.4 Linear Material Balance Problems: Alternative Specifications  | 82        | 6.3 Data Reconciliation: Redundancy and Variable Types   | 138        |
| 4.2 Solution of Nonlinear Equation Sets: The Newton–Raphson Method  | 82        | 6.4 Data Reconciliation: Linear and Nonlinear Material and Energy Balances   | 143        |
| 4.2.1 Equation Linearization via Taylor’s Series Expansion  | 82        | 6.5 Data Reconciliation: Lagrange Multipliers  | 149        |
| 4.2.2 Nonlinear Equation Set Solution via the Newton–Raphson Method   | 83        | 6.5.1 Data Reconciliation: Lagrange Multiplier Compact Matrix Notation   | 152        |
| 4.2.3 Newton–Raphson Coding Strategy for Nonlinear Equation Sets  | 86        | 6.6 Gross Error Detection and Identification   | 154        |
| 4.2.4 Nonlinear Material Balance Problems: The Simultaneous Approach  | 90        | 6.6.1 Gross Error Detection: The Global Test (GT) Method   | 154        |
| References  | 92        | 6.6.2 Gross Error (Suspect Measurement) Identification: The Measurement Test (MT) Method: Linear Constraints           | 155        |
| Problems  | 93        | 6.6.3 Gross Error (Suspect Measurement) Identification: The Measurement Test Method: Nonlinear Constraints             | 156        |
| <b>5. Process Energy Balances</b>   | <b>98</b> | 6.7 Closing Remarks  | 158        |
| 5.1 Introduction  | 98        | References   | 158        |
| 5.2 Separator: Equilibrium Flash  | 101       | Problems   | 158        |
| 5.2.1 Equilibrium Flash with Recycle: Sequential Modular Approach   | 103       | <b>7. Gas Turbine Cogeneration System Performance, Design, and Off-Design Calculations: Ideal Gas Fluid Properties</b> | <b>164</b> |
| 5.3 Equilibrium Flash with Recycle: Simultaneous Approach   | 109       | 7.1 Equilibrium State of a Simple Compressible Fluid: Development of the $T ds$ Equations                              | 165        |
| 5.4 Adiabatic Plug Flow Reactor (PFR) Material and Energy Balances Including Rate Expressions: Euler’s First-Order Method | 112       | 7.1.1 Application of the $T ds$ Equations to an Ideal Gas  | 166        |
| 5.4.1 Reactor Types   | 112       | 7.1.2 Application of the $T ds$ Equations to an Ideal Gas: Isentropic Process  | 166        |
| 5.5 Styrene Process: Material and Energy Balances with Reaction Rate  | 117       | 7.2 General Energy Balance Equation for an Open System   | 167        |
| 5.6 Euler’s Method versus Fourth-Order Runge–Kutta Method for Numerical Integration                                       | 121       | 7.3 Cogeneration Turbine System Performance Calculations: Ideal Gas Working Fluid                                      | 167        |
| 5.6.1 The Euler Method: First-Order ODEs  | 121       | 7.3.1 Compressor Performance Calculations  | 167        |
| 5.6.2 RK4 Method: First-Order ODEs  | 122       | 7.3.2 Turbine Performance Calculations   | 168        |
| 5.7 Closing Comments  | 124       | 7.4 Air Basic Gas Turbine Performance Calculations   | 169        |
| References  | 125       |  |            |
| Problems  | 125       |  |            |
