Preface

page xiii

1 Lewis Basicity and Affinity Measurement: Definitions and Context	1
1.1 The Brønsted Definition of Acids and Bases	2
1.2 Scales of Brønsted Basicity and Affinity in Solution	3
1.3 Scales of Brønsted Basicity and Affinity in the Gas Phase	6
1.4 The Lewis Definition of Acids and Bases	6
1.5 Quantum Chemical Descriptions of Lewis Acid/Base Complexes	10
1.5.1 Valence-Bond Model	10
1.5.2 Perturbation Molecular Orbital Theory	10
1.5.3 Variational Supermolecular Method and Energy Decomposition Schemes	12
1.5.4 Natural Bond Orbital Theory	17
1.5.5 Quantum Theory of Atoms in Molecules	18
1.6 Measurement of Lewis Basicity	20
1.6.1 Gas-phase Reactions	21
1.6.2 Solution Reactions	22
1.6.3 Standard State Transformations	23
1.6.4 Choice of Solvent	24
1.7 Measurement of Lewis Affinity	24
1.8 The Role of the Solvent	29
1.9 Spectroscopic Scales of Basicity (Affinity)	34
1.10 Polybasic Compounds	38
1.11 Attempts at a Quantitative Formulation of the Lewis Definition of Acids and Bases	42
1.11.1 Hard and Soft Acids and Bases	42
1.11.2 The ECW and ECT Models	47
1.11.3 The Beta and Xi Equation	52
1.11.4 A Chemometric Approach	53
1.11.5 Quantum Chemical Descriptors for Basicity Scales	56
1.12 Concluding Remarks and Content of Chapters 2–7	58
References	60
2 The Donor Number or SbCl_5 Affinity Scale	71
2.1 Structure of SbCl_5 Complexes	71
2.2 Definition of the Donor Number Scale	73
2.3 Experimental Determination of the Donor Number	73

2.4	The Donor Number Scale: Data	74
2.5	Critical Discussion	80
	References	81
3	The BF₃ Affinity Scale	85
3.1	Structure of BF ₃ Complexes	86
3.2	Definition of the BF ₃ Affinity Scale	88
3.3	Experimental Determination of the BF ₃ Affinity Scale	89
3.4	The BF ₃ Affinity Scale: Data	90
3.5	Discussion	102
3.5.1	Medium Effects	102
3.5.2	Hardness of BF ₃	102
3.5.3	Comparison of the BF ₃ and SbCl ₅ Affinity Scales	103
3.5.4	Computation of the BF ₃ Affinity	104
3.6	Conclusion	105
	References	106
4	Thermodynamic and Spectroscopic Scales of Hydrogen-Bond Basicity and Affinity	111
4.1	Structure of Hydrogen-Bonded Complexes	113
4.2	Hydrogen-Bond Basicity Scales: Early Works	117
4.3	The 4-Fluorophenol Hydrogen-Bond Basicity Scale	119
4.3.1	Definition	119
4.3.2	Method of Determination	119
4.3.3	Polyfunctional Hydrogen-Bond Acceptors	120
4.3.4	Data	121
4.3.5	Range of Validity of the Scale	167
4.4	Hydrogen-Bond Affinity Scales: Early Studies	168
4.5	The 4-Fluorophenol Affinity Scale	170
4.6	Comparison of 4-Fluorophenol Affinity and Basicity Scales	185
4.7	Spectroscopic Scales	188
4.7.1	Infrared Shift of Methanol	188
4.7.2	Solvatochromic Shifts of 4-Nitrophenol and 4-Nitroaniline	210
4.8	Conclusion	221
	References	221
5	Thermodynamic and Spectroscopic Scales of Halogen-Bond Basicity and Affinity	229
5.1	Structure of Halogen-Bonded Complexes	231
5.2	The Diiodine Basicity Scale	237
5.2.1	Definition of the Scale	237
5.2.2	Methods for the Determination of Diiodine Complexation Constants	238
5.2.3	Temperature Correction	239
5.2.4	Solvent Effects	239
5.2.5	Data	243

5.3	Is the Diiodine Basicity Scale a General Halogen-Bond Basicity Scale?	283
5.4	The Diiodine Affinity Scale	285
5.5	Spectroscopic Scales	286
5.5.1	Infrared Shifts of ICN, I ₂ and ICl	286
5.5.2	The Blue Shift of the Diiodine Visible Band	306
5.6	Conclusion	309
	References	309
6	Gas-Phase Cation Affinity and Basicity Scales	323
6.1	Cations as Lewis Acids in the Gas Phase	323
6.2	Structure of Cation/Molecule Adducts	326
6.3	Experimental Techniques for Measuring Gas-Phase Cation Affinities and Basicities	334
6.3.1	High-Pressure Mass Spectrometry (HPMS)	334
6.3.2	Collision-Induced Dissociation Threshold (CIDT)	335
6.3.3	Ligand-Exchange Equilibrium Measurements in Trapping Devices	336
6.3.4	Selected Ion Flow Tube (SIFT)	337
6.3.5	Kinetic Method	337
6.3.6	Radiative Association Kinetics (RAK)	338
6.3.7	Blackbody Infrared Radiative Dissociation (BIRD)	338
6.3.8	Vaporization and Lattice Energies	339
6.4	Ion Thermochemistry Conventions	339
6.5	Lithium, Sodium, Potassium, Aluminium, Manganese, Cyclopentadienylnickel, Copper and Methylammonium Cations Affinity and Basicity Scales	340
6.5.1	Lithium	340
6.5.2	Sodium	346
6.5.3	Potassium	353
6.5.4	Aluminium	354
6.5.5	Manganese	354
6.5.6	Cyclopentadienylnickel	360
6.5.7	Copper	366
6.5.8	Methylammonium	371
6.6	Significance and Comparison of Gas-Phase Cation Scales	376
6.6.1	Properties of Cations and Significance of MCB and MCA Scales	376
6.6.2	Relationship of MCA with MCB	381
6.6.3	The Computation of MCB and MCA Scales	382
6.6.4	MCA and MCB Scales and the Concept of a Cation/ π Interaction	383
6.6.5	Conventional Versus Ionic Hydrogen-Bond Basicity and Affinity Scales	386
6.6.6	Comparison of Cation Basicity Scales	387
	References	389
7	The Measurement of Lewis Basicity and Affinity in the Laboratory	401
7.1	Calorimetric Determination of the BF ₃ Affinity of Pyridine by Gas/Liquid Reaction	401

7.1.1	Introduction: Principles and Difficulties in the Calorimetric Measurement of the Enthalpy of a Gas/Liquid Reaction	401
7.1.2	Reagents and Equipment	403
7.1.3	Experiment	404
7.1.4	Results	405
7.2	Calorimetric Determination of the BF_3 Affinity of Pyridine by Liquid/Liquid Reaction	406
7.2.1	Introduction: Measuring Relative BF_3 Affinity by Ligand Exchange in Solution	406
7.2.2	Reagents and Equipment	407
7.2.3	Experiment	407
7.2.4	Results	407
7.3	Determination by FTIR Spectrometry of the Complexation Constants of 4-Fluorophenol with Isopropyl Methyl Ketone and Progesterone	408
7.3.1	Introduction: Recognition of Progesterone by its Receptor	408
7.3.2	Reagents and Equipment	409
7.3.3	Experiment	409
7.3.4	Results and Discussion	410
7.4	Determination by FTIR Spectrometry of the Complexation Enthalpy and Entropy of 4-Fluorophenol with Cyclopropylamine	413
7.4.1	Introduction	413
7.4.2	Reagents and Equipment	414
7.4.3	Experiment	414
7.4.4	Results	414
7.4.5	Comparison with Theoretical Calculations	417
7.5	FTIR Determination of the OH Shift of Methanol Hydrogen Bonded to Pyridine, Mesitylene and <i>N</i> -Methylmorpholine	418
7.5.1	Introduction	418
7.5.2	Reagents and Equipment	418
7.5.3	Experiment	419
7.5.4	Results and Discussion	419
7.6	Solvatochromic Shifts of 4-Nitrophenol upon Hydrogen Bonding to Nitriles	420
7.6.1	Introduction	420
7.6.2	Reagents and Equipment	421
7.6.3	Experiment	421
7.6.4	Results and Discussion	422
7.7	Determination of the Complexation Constant of Diiodine with Iodocyclohexane by Visible Spectrometry	424
7.7.1	Introduction: Measuring the Weak Diiodine Basicity of Haloalkanes	424
7.7.2	The Rose–Drago Method	424
7.7.3	Reagents and Equipment	426
7.7.4	Experiment	426
7.7.5	Results and Discussion: Illustration of the HSAB Principle	427

7.8	Determination of the Complexation Enthalpy and Entropy of Diiodine with Dimethyl Sulfoxide by Visible Spectrometry	429
7.8.1	Introduction	429
7.8.2	Reagents and Equipment	429
7.8.3	Experiment	429
7.8.4	Results	430
7.8.5	Discussion	432
7.9	FTIR Determination of the Shift of the I–C Stretching of Iodine Cyanide upon Halogen Bonding to Phosphine Chalcogenides	434
7.9.1	Introduction	434
7.9.2	Reagents and Equipment	435
7.9.3	Experiment	435
7.9.4	Results and Discussion: $\Delta\nu(\text{ICN})$ as a Spectroscopic Scale of Halogen-Bond Affinity	435
7.10	Blue Shift of the Visible Diiodine Transition Upon Halogen Bonding to Pyridines	436
7.10.1	Introduction	436
7.10.2	Reagents and Equipment	437
7.10.3	Experiment	437
7.10.4	Results and Discussion: Substituent Effects	438
7.11	Mass Spectrometric Determination of the Gas-Phase Lithium Cation Basicity of Dimethyl Sulfoxide and Methyl Phenyl Sulfoxide by the Kinetic Method	439
7.11.1	The Kinetic Method	439
7.11.2	Reagents and Equipment	440
7.11.3	Experiment	441
7.11.4	Data Treatment	442
7.11.5	Discussion: Substituent Effects	444
	References	445
