<i>Preface</i>	xi
<i>Contributors</i>	xv
<i>Glossary</i>	xvii
1 An Introduction to Cavity Ring-Down Spectroscopy	1
<i>Kevin K. Lehmann, Giel Berden and Richard Engeln</i>	
1.1 Introduction	1
1.2 Direct Absorption Spectroscopy	3
1.3 Basic Cavity Ring-Down Spectroscopy Set-Up	6
1.4 A More Refined Picture	10
1.5 Fitting of Cavity Ring-Down Transients	14
1.6 A Few Examples	16
1.7 Going Beyond the Standard Pulsed CRDS Experiment	19
1.8 Summary	23
References	24
2 Cavity Enhanced Techniques Using Continuous Wave Lasers	27
<i>J.H. van Helden, R. Peverall and G.A.D. Ritchie</i>	
2.1 Introduction	27
2.2 Properties of Optical Cavities and CW Lasers Relevant to Cavity Enhanced Spectroscopy	28
2.2.1 Properties of Optical Cavities	28
2.2.2 Laser Bandwidth, Noise, and Cavity Interactions	32
2.3 Experimental Methods for CW Laser Cavity Enhanced Spectroscopy	34
2.3.1 CW-Cavity Ring-Down Spectroscopy (CW-CRDS)	34
2.3.2 Cavity Enhanced Absorption Spectroscopy (CEAS/ICOS)	39
2.3.3 Phase Shift Cavity Ring-Down Spectroscopy (PSCRDS)	42
2.4 Spectroscopy with Resonant Cavities	47
2.4.1 Frequency Locked CW-CRDS	47
2.4.2 Methods for Locking Cavities and Lasers	48
2.4.3 Optical Feedback CRDS and CEAS (OF-CRDS/OF-CEAS)	50
2.4.4 Other Locked-Cavity Techniques	53
2.4.5 Optical Heterodyne Cavity Ring-Down Spectroscopy	54

2.5	Summary	54
	References	55
3	Broadband Cavity Ring-Down Spectroscopy	57
	<i>Stephen Ball and Roderic Jones</i>	
3.1	Introduction	57
3.2	The Time and Wavelength Evolution of a Single Ring-Down Event	58
3.3	Two-Dimensional Techniques: Resolving Broadband Cavity Output in Time and Wavelength	61
3.4	One-Dimensional Techniques: Time or Wavelength	64
3.4.1	Wavelength Selection Methods	64
3.4.2	Fourier Transform Methods	65
3.4.3	Phase Shift Cavity Methods	66
3.4.4	Broadband Cavity Enhanced Absorption Spectroscopy	68
3.5	How to Extract Quantitative Information from Broadband Spectra	70
3.5.1	Mirror Reflectivity Considerations	70
3.5.2	Differential Optical Absorption Spectroscopy	71
3.5.3	Multi-Exponential Decays	74
3.6	Optimising the Sensitivity of a Broadband Measurement	79
3.7	Applications of Broadband Cavity Methods	83
3.7.1	Atmospheric Measurements	83
3.7.2	Liquid Phase Spectroscopy	85
	References	87
4	Cavity Ring-Down Spectroscopy in Analytical Chemistry	89
	<i>L. van der Sneppen, C. Gooijer, W. Ubachs and F. Ariese</i>	
4.1	Introduction	89
4.1.1	Absorbance Detection in Liquid Flow Systems	89
4.1.2	Requirements for Detection Cells for Analytical Purposes	91
4.2	Condensed Media CRDS	92
4.2.1	Studying Solid-Phase Samples with CRDS	92
4.2.2	Studying Liquid-Phase Samples With CRDS	93
4.2.3	Incoherent Broad-Band Cavity-Enhanced Absorption Spectroscopy: IBBCEAS	96
4.2.4	CRDS Absorption Detection in Liquid Chromatography	97
4.3	Evanescence-Wave CRDS	102
4.3.1	EW-CRDS Using Monolithic Resonators	102
4.3.2	Applications of EW-CRDS to Condensed Media	104
4.4	Future Trends and Perspectives	107
	References	108
5	Cavity Ring-Down Spectroscopy Using Waveguides	113
	<i>Hans-Peter Looock</i>	
5.1	Introduction	113

5.2	The Basic Experiments	114
5.2.1	The Fiber-Loop Ring-Down Experiment	114
5.2.2	The FBG Cavity Ring-Down Experiment	116
5.3	Optics and Instrumentation	117
5.3.1	Waveguide Optics	117
5.3.2	Waveguide Materials	121
5.3.3	Fiber-Optic Components	124
5.4	Review of Waveguide CRD Literature	127
5.4.1	Measurement of Optical Loss of Connectors and Fibers	127
5.4.2	Mechanical Sensing with Waveguide CRD	127
5.4.3	Interfaces to Microfluidic Devices	132
5.4.4	Lensed Fiber Ends	132
5.4.5	Amplified Fiber CRD	134
5.4.6	Evanescent Field Absorption Spectroscopy Using Waveguide CRD	136
5.4.7	Choice of Wavelength for Absorption Detection	137
5.4.8	Refractive Index Sensing Using LPGs in Fiber Cavities	138
5.5	Conclusion and Outlook	140
	Acknowledgements	140
	References	141
6	Cavity Ring-Down Spectroscopy of Molecular Transients of Astrophysical Interest	145
	<i>Harold Linnartz</i>	
6.1	Introduction	145
6.1.1	Astrochemical Setting	145
6.1.2	Plasma Techniques: Cell Discharges and Plasma Expansions	147
6.1.3	Sensitive and Selective Detection Schemes	148
6.2	Experimental	149
6.2.1	High-Pressure Pulsed Planar Plasma Source	149
6.2.2	Pulsed Cavity Ring Down Spectroscopy – the Detection Scheme	151
6.2.3	Pulsed Cavity Ring-Down Spectroscopy – an Example	151
6.2.4	CW Cavity Ring-Down Spectroscopy – the Detection Scheme	155
6.2.5	CW Cavity Ring-Down Spectroscopy – an Example	156
6.2.6	Frequency Plasma Double Modulation Spectroscopy – the Detection Scheme	157
6.2.7	Frequency Plasma Double Modulation Spectroscopy – an Example	159
6.2.8	CW Electron Impact Source	160
6.2.9	Production Modulation Spectroscopy – Detection Scheme and Example	162
6.2.10	CW Cavity Ring Down Spectroscopy – Detection Scheme and Example	164
6.3	Astronomical Considerations	167
6.4	Results	168

6.5 Outlook	172
Acknowledgements	173
References	173
7 Applications of Cavity Ring-Down Spectroscopy in Atmospheric Chemistry	181
<i>Gus Hancock and Andrew J. Orr-Ewing</i>	
7.1 Brief Overview	181
7.2 Measurement of Trace Atmospheric Species by CRDS	184
7.2.1 An Example of a CRDS Apparatus for Atmospheric Composition Measurements	185
7.2.2 Open-Path CRDS Measurements of Atmospheric Composition	188
7.2.3 Diode Laser CRDS Detection of Atmospheric VOCs and Preconcentration of Air Samples	190
7.2.4 Considerations for the Sensitivity of Atmospheric CRDS Instruments	192
7.3 Laboratory-Based Studies of Atmospheric Interest	193
7.3.1 Rate Constants	193
7.3.2 Quantum Yields	197
7.3.3 Absorption Cross-Sections	199
7.4 Optical Properties of Atmospheric Aerosol Particles	201
7.4.1 Light Scattering by Atmospheric Aerosol Particles	202
7.4.2 Effect of Aerosols on Radiative Forcing of the Atmosphere and Climate Change	202
7.4.3 Some Fundamental Principles of CRDS of Aerosols	205
7.5 Future Developments	207
References	208
8 Cavity Ring-Down Spectroscopy for Medical Applications	213
<i>Manfred Mürztz and Peter Hering</i>	
8.1 Introduction	213
8.2 Trace Gases in Medicine and Biology	214
8.2.1 Composition of Exhaled Human Breath	214
8.2.2 Other Biological Sources of Volatile Markers	217
8.3 Instrumentation for Laser Analytics of Breath and Other Biological Gas Samples	218
8.3.1 Sample Collection and Preparation	218
8.3.2 Laser Spectroscopic Approach	220
8.3.3 Comparison with Conventional Techniques	223
8.4 Applications to Life Sciences	223
8.4.1 Monitoring Exhaled Ethane	223
8.4.2 Monitoring Exhaled CO	228
8.4.3 Analysis of Blood NO	229
8.5 Conclusion and Perspectives	232
Acknowledgements	233
References	233

9	Studies into the Growth Mechanism of a-Si:H Using <i>in situ</i> Cavity Ring-Down Techniques	237
	<i>M.C.M. van de Sanden, I.M.P. Aarts, J.P.M. Hoefnagels, B. Hoex, R. Engeln and W.M.M. Kessels</i>	
9.1	Introduction	237
9.2	Gas Phase CRDS on SiH _x Radicals	240
9.2.1	Production and Loss Processes of Radicals Under Plasma Conditions	240
9.2.2	Experimental Set-Up for Plasma Deposition of a-Si:H and CRDS Measurements	242
9.2.3	Cavity Ring-Down Measurements During ETP Deposition of a-Si:H	246
9.3	Thin Film CRDS on Dangling Bonds in a-Si:H Films (<i>ex situ</i>)	252
9.3.1	General Considerations	254
9.3.2	Measuring <i>ex-situ</i> Dangling Bonds in a-Si:H Films	260
9.4	Evanescent Wave CRDS on Dangling Bonds During a-Si:H Film Growth	263
9.4.1	The Evanescent Wave CRDS Set-Up	264
9.4.2	Measuring Dangling Bonds During a-Si:H Film Growth	265
	Acknowledgements	268
	References	269
10	Cavity Ring-Down Spectroscopy for Combustion Studies	273
	<i>Xavier Mercier and Pascale Desgroux</i>	
10.1	Introduction	273
10.2	General Description of Cavity Ring-Down Spectroscopy in Flames	277
10.3	Experimental Set-Up	280
10.3.1	Burners and Flames	280
10.3.2	Laser Sources	282
10.3.3	Ring-Down Cavity for Low Pressure Flames	283
10.3.4	Typical Designs of Cavities for Flame Experiments	283
10.3.5	Mode Matching under Flame Conditions	284
10.3.6	Cavity Alignment	286
10.3.7	Detection Scheme	288
10.4	Quantitative Concentration Measurements by CRD Spectroscopy in Flames	289
10.4.1	Concentration Determination for Diatomic Species	290
10.4.2	Precautions	290
10.4.3	Absolute Concentration Measurements for an Ideal Case	291
10.4.4	A Numerical Example: CH Absorption	294
10.5	Concentration Profile Determination	295
10.5.1	General Method	295
10.5.2	Case of a Nonhomogeneous Concentration Field	296

10.6	Specific Difficulties in Combustion Studies	300
10.6.1	CRD Measurements Under Strong Absorption Conditions	300
10.6.2	Temperature and Thermal Gradient Effects	302
10.6.3	Stable Species	302
10.7	Case of Particles: Soot Volume Fraction Determination	303
10.8	Conclusion and Prospects	307
	Acknowledgements	307
	References	307
