Introduction	xv

Chapter 1 Let there be light..... 1

1.1 The electromagnetic spectrum	1
1.2 The generation of UV energy	2
1.2.1 The medium-pressure mercury lamp	3
1.2.1.1 The standard mercury arc lamp	3
1.2.1.2 The electrodeless microwave-powered UV lamp	5
1.2.1.3 Wavelength output of the medium-pressure mercury lamp	7
1.2.2 Doped lamps	8
1.2.3 The low-pressure mercury lamp	10
1.2.4 The high-pressure mercury lamp or capillary lamp	10
1.2.5 Flash lamps	10
1.2.6 Fluorescent lamps	11
1.2.7 Excimer lamps	11
1.2.8 Light emitting diodes	11
1.2.9 Lasers	12
1.3 The light absorption process	13
1.4 UV safety and ozone	15
References	15

Chapter 2 A little chemistry 17

2.1 Free radical chemistry	17
2.2 The chromophore and absorption of UV energy	18
2.2.1 The generation of radicals	18
2.2.2 The polymerization process	20
2.3 Type I photoinitiators: Mechanism of the scission process	22
2.3.1 Alpha-scission	22
2.3.2 Beta-scission	23

2.4	Type II photoinitiators: Mechanism of the abstraction process.....	24
2.4.1	Hydrogen abstraction from a donor molecule	24
2.4.2	Intramolecular γ -hydrogen abstraction: The Norrish Type II reaction	25
2.5	The influence of molecular substitution on absorption and photoactivity.....	26
2.5.1	Type I photoinitiators: Substitution effects.....	27
2.5.2	Type II photoinitiators: Substitution effects.....	28
2.5.3	Commercial photoinitiators	30
2.6	Photobleaching.....	31
2.7	Diverse mechanisms: Variations on the Type I and Type II process.....	33
2.7.1	Acyloximino esters	33
2.7.2	Anthraquinones	34
2.7.3	BCIM and the lophyl radical	35
2.7.4	Benzoylformate esters.....	36
2.7.5	Substituted maleimides as photoinitiators	37
2.7.6	Phosphine oxides and secondary scission	38
2.7.7	Photo-acid generation	39
2.7.8	Photo-base generation.....	41
2.7.9	Anthracene peroxy radicals	42
2.8	The thiol-ene photopolymerization	43
	References	45
Chapter 3 Academics unlimited		47
3.1	Triplet lifetimes and monomer quenching reactions.....	48
3.2	Modification of hydroxyacetophenones	49
3.3	Alkylaminoacetophenones and wavelength selection.....	50
3.4	Phosphine oxides: Reactivity and solvolytic stability	53
3.5	Benzophenone and thioxanthone triplet reactions.....	54
3.6	Substituted benzophenones	58
3.7	Substituted thioxanthenes.....	60
3.8	Novel photoinitiators	64
3.9	Radical reactions.....	66
3.9.1	Primary radical reactions	67
3.9.2	Recombination reactions	67
3.9.3	Rearrangement reactions.....	68
3.9.4	Disproportionation reactions.....	69
3.9.5	Oxygen effects and chain transfer	70
3.9.6	Termination reactions	71
3.9.7	Identification of radicals and excited states.....	71
	References	72

Chapter 4	Commercial photoinitiators	75
4.1	Type I photoinitiators (see Tables A.1 and A.2)	75
4.1.1	Hydroxyacetophenones	75
4.1.2	Alkylaminoacetophenones.....	77
4.1.3	Benzil ketals and dialkoxyacetophenones.....	78
4.1.4	Benzoin ethers.....	79
4.1.5	Phosphine oxides.....	80
4.1.6	Specialties	82
	4.1.6.1 Acyloximino esters	82
	4.1.6.2 BCIM and HABIs	82
	4.1.6.3 Photoacid generators	83
	4.1.6.4 Alphahaloacetophenones	84
	4.1.6.5 Trichloromethyl-S-triazines	84
	4.1.6.6 Photobase generators.....	85
4.2	Type II photoinitiators	86
4.2.1	Benzophenones	86
4.2.2	Substituted benzophenones	87
4.2.3	Thioxanthenes.....	88
4.2.4	Anthraquinones	89
4.2.5	Benzoylformate esters.....	90
4.2.6	Camphorquinone.....	91
4.3	Blends of photoinitiators.....	91
4.4	Migration and polymeric photoinitiators	93
4.4.1	Migration of low-molecular weight species.....	93
4.4.2	Polymeric photoinitiators	95
	4.4.2.1 Polymeric Type I photoinitiators	98
	4.4.2.2 Polymeric Type II photoinitiators	98
	4.4.2.3 Polymeric aminobenzoate hydrogen donors.....	99
4.4.3	The "Nestlé list"	99
4.5	Visible light curing	99
4.5.1	Titanocenes	101
4.5.2	Dibenzylidene ketones.....	101
4.5.3	1,2-Diketones	101
4.5.4	Ketocoumarins.....	102
4.5.5	Dye sensitized photoinitiation.....	102
	4.5.5.1 Dye plus coinitiator	102
	4.5.5.2 Dye plus borate salt	103
	4.5.5.3 Dye plus HABIs.....	103
	4.5.5.4 Dye plus S-triazine	103
4.6	Water-based UV curing.....	103

4.7	Hydrogen donors.....	105
4.7.1	Tertiary amines.....	106
4.7.2	Alpha-amino acids	108
4.7.3	Other types of hydrogen donor	108
	References and further reading	109
Chapter 5	Factors affecting the use of photoinitiators	115
5.1	Matching the photoinitiator absorption to the UV source	115
5.1.1	Absorption properties.....	115
5.1.2	Formulating for LED UV	116
5.1.2.1	Type I photoinitiator LED systems.....	117
5.1.2.2	Type II photoinitiator LED systems	117
5.1.2.3	The use of ITX as a sensitizer for LEDs	118
5.2	Oxygen inhibition.....	118
5.2.1	Radical–oxygen interaction.....	118
5.2.2	Nitrogen and carbon dioxide inertion.....	119
5.2.3	The effect of viscosity on cure	121
5.3	Film thickness, surface and depth cure, shrinkage and adhesion	123
5.3.1	Surface and depth cure.....	123
5.3.2	Shrinkage and adhesion	127
5.4	Sensitization and synergy	128
5.4.1	Sensitization	128
5.4.2	Synergy	130
5.5	The effect of pigments on the UV curing process	131
5.5.1	Pigment absorption and the pigment window: Choice of photoinitiator	131
5.5.2	Replacing ITX.....	133
5.5.3	Titanium dioxide whites and carbon blacks.....	134
	References and further reading	136
Chapter 6	Photoproducts and the yellowing of coatings	139
6.1	Intrinsic color, photoyellowing, and oxidation products.....	139
6.2	The formation of photoproducts	139
6.2.1	Photoproducts from Type I photoinitiators	140
6.2.2	Photoproducts from Type II photoinitiators.....	145
	References	147
Chapter 7	Cationic chemistry.....	149
7.1	The light absorption process and the generation of acid.....	150
7.1.1	Triphenylsulphonium salts	150
7.1.2	Diphenyliodonium salts	151

7.2	Epoxy polymerization and the dark reaction.....	153
7.2.1	The polymerization process.....	153
7.2.2	The effect of alcohols and chain transfer	154
7.2.3	Hybrid cure.....	155
7.3	Triarylsulphonium salts (see Tables A.7 and A.8).....	155
7.3.1	Sulphonium salts that may release benzene.....	156
7.3.2	Sulphonium salts that are “benzene free”	157
7.4	Dialkylphenacylsulphonium salts	160
7.5	Diaryliodonium salts	160
7.5.1	Iodonium salts that may produce benzene.....	162
7.5.2	Iodonium salts that are “benzene free”	162
7.6	Ferrocenium salts	164
	References and further reading	165
Chapter 8 Factors affecting the use of cationic photoinitiators		167
8.1	The influence of the anion.....	167
8.2	Photochemical radical decomposition of onium salts.....	168
8.3	Sensitization of the cationic photoinitiator	169
8.3.1	Extension of absorption wavelength by a sensitizer	169
8.3.2	Sensitizers for cationic photoinitiators.....	170
8.4	The influence of temperature on the polymerization	170
8.5	The effect of water on polymerization.....	170
	References and further reading	172
Appendix A: Tables and absorbance graphs.....		175
Appendix B: Further information.....		279
