

Catalysis by Gold

Geoffrey C. Bond

Brunel University, UK

Catherine Louis

Université Pierre et Marie Curie, France

David T. Thompson

Consultant, World Gold Council, UK

Contents

<i>Acknowledgements</i>	v
<i>Preface</i>	vii
Chapter 1 Introduction to Catalysis	1
1.1 The Phenomenon of Catalysis	1
1.2 The Activation Energy of Catalysed Reactions	4
1.3 Ways of Using Heterogeneous Catalysts	6
1.4 Understanding Catalysed Reactions	9
1.5 The Catalytic Activities of Metals	17
1.6 Catalysis in Bimetallic Systems	19
References	21
Chapter 2 The Physical and Chemical Properties of Gold	22
2.1 Introduction	22
2.2 The Origin of Relativistic Effects	23
2.3 Comparisons of the Chemistry of Gold with that of the Adjacent Elements	27
2.4 The Auophilic Bond	29
2.5 Physical Properties of Gold and Adjacent Elements	29
2.5.1 Bulk properties	29
2.5.2 The structure of single-crystal surfaces	31
2.6 Bimetallic Systems Containing Gold	33
References	35
Chapter 3 Physical Properties and Characterisation of Small Gold Particles	37
3.1 Overview	37
3.2 Ways of Preparing Small Particles of Gold	40
3.2.1 Introduction	40
3.2.2 Gaseous clusters	41
3.2.3 Colloidal gold	41
3.2.4 Other methods	44
3.3 Techniques for the Study of Small Particles of Gold	46
3.3.1 Determination of size and structure	46
3.3.2 Investigation of optoelectronic parameters	49
3.3.3 Other methods	51

3.4	Variation of Physical Properties with Size	52
3.4.1	Introduction	52
3.4.2	Structure of gaseous and ligand-stabilised clusters	53
3.4.3	Structure of small supported gold particles	53
3.4.4	Optoelectronic properties of clusters and small supported particles	55
3.5	Metal-Support Interactions	59
3.5.1	Particle shape and bonding to support	59
3.5.2	Influence of the support on gold particles	63
3.5.3	Influence of gold particles on the support	64
	References	65

Chapter 4 Preparation of Supported Gold Catalysts 72

4.1	Introduction	72
4.1.1	Principles of the preparation methods and definitions	72
4.1.2	Gold speciation	74
4.1.3	Fulminating gold	75
4.2	Methods of Preparation using Gold Chloride Precursors	77
4.2.1	Impregnation	77
4.2.2	Coprecipitation	78
4.2.3	Deposition-precipitation	79
4.2.4	Deposition-precipitation with urea (DPU)	86
4.2.5	Anion adsorption	88
4.2.6	Removal of chloride when using gold chloride precursors	89
4.3	Methods of Preparation using Chloride-Free Gold Precursors	89
4.3.1	Impregnation in the aqueous phase	89
4.3.2	Deposition of gold-phosphine complexes	90
4.3.3	Deposition of other organogold complexes	91
4.3.4	Chemical vapour deposition	92
4.3.5	Cation exchange and adsorption	93
4.3.6	Deposition of colloidal gold onto supports	93
4.3.7	Deposition of dendrimer-stabilised gold particles	95
4.4	Less Conventional Methods	95
4.4.1	Sol-gel method	95
4.4.2	Photochemical deposition	96
4.4.3	Sonochemical techniques	97
4.4.4	Spray techniques	97
4.4.5	Low-energy cluster or atom beam deposition	98
4.4.6	Direct oxidation of bulk alloy	99
4.4.7	Solvated metal atom dispersion or impregnation (SMAD or SMAI)	99
4.5	Preparation of Gold Catalysts on Specific Supports	100
4.5.1	Gold in zeolites	100
4.5.2	Gold in ordered mesoporous silica	101
4.5.3	Gold in titanosilicate	103
4.5.4	Gold on carbon supports	104

4.6	Preparation of Supported Bimetallic Catalysts Containing Gold . . .	105
4.6.1	Introduction	105
4.6.2	Methods without interaction between precursors in solution	106
4.6.2.1	Co-impregnation	106
4.6.2.2	Co-adsorption of cations	106
4.6.2.3	Co-deposition-precipitation	107
4.6.2.4	Photoreduction	107
4.6.3	Redox methods for preparing bimetallic catalysts	107
4.6.4	Use of a bimetallic precursor	108
4.6.4.1	Adsorption of bimetallic molecular clusters	108
4.6.4.2	Deposition of bimetallic colloids	109
4.6.4.3	Deposition of dendrimer-stabilised bimetallic particles	110
4.6.4.4	Low-energy cluster deposition	110
4.7	Influence of the Thermal Treatment on Gold Particle Size	110
4.7.1	Nature of the gas	111
4.7.2	Gas flow rate and sample weight	111
4.7.3	Effect of the temperature of thermal treatment	111
4.8	Effect of Conditions of Storage on Size of Gold Particles	112
4.9	Conclusion	113
	References	113

Chapter 5 Chemisorption of Simple Molecules on Gold 121

5.1	Introduction: Chemisorption and Catalysis	121
5.2	Interaction of Oxygen with Gold	122
5.2.1	Interaction with gold clusters	122
5.2.2	Chemisorption of oxygen on gold surfaces	127
5.2.3	Finale	133
5.3	Chemisorption of Carbon Monoxide on Gold	134
5.3.1	Reaction of carbon monoxide with gaseous gold clusters	134
5.3.2	Chemisorption of carbon monoxide on massive gold surfaces	136
5.3.3	The bonding of carbon monoxide to gold and results of DFT calculations	139
5.3.4	Chemisorption of carbon monoxide on supported gold catalysts	141
5.4	Chemisorption of the Oxides of Nitrogen on Gold Surfaces	149
5.5	The Chemisorption of Hydrogen and of Other Molecules on Gold	150
5.5.1	Hydrogen	150
5.5.2	Other molecules	153
	Appendix: Introduction to Density Functional Theory	154
	References	156

Chapter 6 Oxidation of Carbon Monoxide 161

6.1	Introduction	161
-----	------------------------	-----

6.2	Sensitivity of Gold Catalysts towards Reaction Conditions	162
6.2.1	Reproducibility of preparative method	163
6.2.2	Conditions of activation	163
6.2.3	Conditions of reaction and the influence of moisture	164
6.2.4	Expression of the results	167
6.2.5	Kinetics of carbon monoxide oxidation	167
6.2.6	Deactivation and regeneration	170
6.3	Oxidation of Carbon Monoxide on Various Supported Gold Catalysts	171
6.3.1	Introduction	171
6.3.2	Influence of the nature of the support	171
6.3.3	Influence of the method of preparation	175
6.3.3.1	Iron oxides	176
6.3.3.2	Titania	176
6.3.3.3	Alumina	177
6.3.3.4	Microporous and mesoporous silica	178
6.3.3.5	Zirconia	179
6.3.3.6	Ceria	180
6.3.3.7	Magnesia	182
6.3.3.8	Acidic supports	183
6.3.3.9	Conclusions	184
6.4	Oxidation State of Gold in Active Catalysts	185
6.5	Particle Size and Metal-Support Interaction	186
6.6	Mechanisms of Carbon Monoxide Oxidation	189
6.6.1	Introduction	189
6.6.2	Mechanisms on gold particle only	189
6.6.3	Mechanisms involving the support	193
6.7	Retrospect and Prospect	197
	References	198

Chapter 7 The Selective Oxidation of Carbon Monoxide in Hydrogen

204

7.1	Introduction: The Nature of the Problem	204
7.1.1	The chemical industry's need for hydrogen	204
7.1.2	Pure hydrogen for use in fuel cells	205
7.2	The Oxidation of Hydrogen to Water	206
7.3	Selective Oxidation of Carbon Monoxide in Hydrogen	208
7.3.1	Tour d'horizon	208
7.3.2	Catalysis by gold on ferric oxide	210
7.3.3	Gold on other supports	213
7.3.4	Conclusion	215
	References	215

Chapter 8 Selective Oxidation

217

8.1	Introduction	217
-----	------------------------	-----

8.1.1	A survey of selective oxidation	217
8.1.2	Reaction mechanisms and the use of bimetallic catalysts	218
8.2	Selective Oxidation of Hydrocarbons	220
8.2.1	Oxidation of propene	220
8.2.2	Oxidation of other alkenes	224
8.2.3	Oxidation of cyclohexane	225
8.2.4	Oxidation of alkanes	226
8.3	Selective Oxidation of Oxygen-Containing Molecules	226
8.3.1	Introduction	226
8.3.2	Oxidation of reducing sugars	227
8.3.3	Oxidation of other aldehydes	229
8.3.4	Oxidation of a C ₆ polyhydric alcohol: sorbitol	229
8.3.5	Oxidation of diols	230
8.3.6	Oxidation of a triol: glycerol	231
8.3.7	Oxidation of monofunctional alcohols	233
8.4	Synthesis of Vinyl Acetate (Ethenyl Ethanoate)	235
8.5	Synthesis of Hydrogen Peroxide	237
8.6	Conclusion	238
	References	239

Chapter 9 Reactions Involving Hydrogen 244

9.1	Introduction: The Interaction of Hydrogen with Gold	244
9.2	Reactions of Hydrogen	245
9.3	Hydrogenation of Unsaturated Molecules and Related Reactions	248
9.3.1	The carbon-carbon double bond	248
9.3.2	Alkynes and alkadienes	252
9.3.3	Aromatic molecules	255
9.3.4	Related reactions	256
9.4	Chemoselective Hydrogenation	256
9.5	Hydrogenation of Carbon Dioxide	261
9.6	Dehydrogenation	263
9.6.1	Introduction	263
9.6.2	Methanol	263
9.6.3	Methanoic acid	264
9.6.4	Other reactions producing hydrogen	265
	References	265

Chapter 10 The Water-Gas Shift 269

10.1	Introduction	269
10.2	Gold as a Catalyst for the Water-Gas Shift	272
10.2.1	Introduction	272
10.2.2	Titania, ferric oxide and similar supports	273
10.2.3	Ceria and ceria-zirconia as supports	276
10.3	Mechanism of the Gold-Catalysed Water-Gas Shift	278
10.3.1	Gold on ceria and ceria-zirconia	279

10.4	Gold on other Oxides	281
10.5	Gold-Containing Bimetallic Catalysts	283
	References	283
Chapter 11 Reactions of Environmental Importance		286
11.1	Introduction	286
11.2	Catalytic Treatment of Vehicle Exhaust	286
11.2.1	Introduction	286
11.2.2	The problem of the nitrogen oxides	289
11.2.3	Selective reduction of nitrogen oxides with propene	289
11.2.4	Reduction of nitrogen oxides with carbon monoxide	292
11.2.5	Reduction of nitrogen oxides by hydrogen	293
11.2.6	Removal of nitrous oxide	293
11.2.7	Gold-containing catalysts for treating vehicle exhaust	294
11.3	Destruction of Other Atmospheric Pollutants	295
11.3.1	Methane	295
11.3.2	Removal of volatile organic compounds (VOCs)	296
11.3.3	Oxidative decomposition of dioxins	299
11.3.4	Hydrodechlorination of chlorofluorocarbons	300
11.3.5	Hydrodechlorination of 2,4-dichlorophenol	301
11.3.6	Removal of chlorinated hydrocarbons	301
11.3.7	Ozone decomposition	302
11.3.8	Reduction of nitrogen oxides with ammonia	303
11.4	Removal of Sulfur Dioxide	303
11.5	Catalytic Wet Air Oxidation (CWAO)	305
	References	306
Chapter 12 Catalysis by Soluble and Supported Gold Compounds		311
12.1	Overview of Homogeneous Catalysis by Gold	311
12.2	Reactions with High Turnover Numbers and Frequencies	314
12.3	Gold Compounds as Catalysts for Organic Synthesis	316
12.3.1	Carbon–oxygen bond formation	317
12.3.2	Carbon–nitrogen bond formation	319
12.3.3	Carbon–carbon bond formation	320
12.3.4	Catalytic hydrogenation	325
12.3.5	Polymerisation of aniline by auric acid	325
12.4	Supported Gold Complex Catalysts	325
12.5	Future Prospects	326
	References	327
Chapter 13 Miscellaneous Reactions Catalysed by Gold		330
13.1	Introduction	330
13.2	Hydrochlorination of Ethyne	330

13.3	The Formation of Carbon–Carbon Bonds	331
13.4	Other Reactions Catalysed by Gold	333
	References	335

Chapter 14 Commercial Applications 337

14.1	Introduction	337
14.2	Pollution and Emission Control Technologies	338
14.2.1	Air cleaning	338
14.2.2	Autocatalysts	340
14.2.3	Catalytic wet air oxidation (CWAO)	342
14.2.4	Mercury oxidation in coal-fired power stations	343
14.3	Chemical Processing	344
14.3.1	Vinyl acetate synthesis	344
14.3.2	Vinyl chloride	345
14.3.3	Production of Nylon precursors	345
14.3.4	Methyl glycolate	346
14.3.5	Selective oxidation of sugars	347
14.3.6	Propene oxide	347
14.3.7	Hydrogen peroxide	349
14.3.8	Hydrotreating distillates	349
14.3.9	Selective hydrogenation	349
14.4	Fuel Cells and the Hydrogen Economy	350
14.5	Sensors	353
14.6	Some Economic Considerations	354
14.7	Future Prospects	356
	References	356
