Contents

Preface XIX

List of Contributors XXI

Volume 1

1	Recent Advance of 'Combined Acid' Strategy for Asymmetric Catalysis	1
	<i>Hisashi Yamamoto and Kentaro Futatsugi</i>	
1.1	Combined Acid Catalysis	1
1.1.1	Brønsted Acid-Assisted Chiral Lewis Acid (BLA)	1
1.1.2	Lewis Acid-Assisted Chiral Lewis Acid (LLA)	12
1.1.3	Lewis Acid-Assisted Chiral Brønsted Acid (LBA)	20
1.1.4	Brønsted Acid-Assisted Chiral Brønsted Acid (BBA)	24
1.2	Super Brønsted Acid Catalyst	29
1.3	Combined Super Brønsted Acid and Lewis Acid System	31
1.4	Conclusion	31
2	Brønsted Acids	35
2.1	Super Brønsted Acid	35
	<i>Hisashi Yamamoto, Daisuke Nakashima</i>	
2.1.1	Definitions	35
2.1.1.1	Brønsted Acid	35
2.1.1.2	Super Brønsted Acid	35
2.1.2	Design of Super Brønsted Acid	38
2.1.2.1	Introduction of Electron-Withdrawing Group	38
2.1.2.2	Carborane Acid	43
2.1.2.3	Conjugate Acids	45
2.1.3	Application to Organic Reaction	46
2.1.3.1	Brønsted Acid as a Proton Donor	46
2.1.3.2	Brønsted Acid as an Electron Acceptor	52
2.1.3.3	Olefin Aziridination	53
2.1.3.4	Superelectrophile	56

2.2	Chiral Brønsted Acids	62
	<i>Takahiko Akiyama</i>	
2.2.1	Introduction	62
2.2.2	Early Investigations	64
2.2.3	Thiourea Catalysts	66
2.2.3.1	Monofunctional Thiourea Catalysts	66
2.2.3.2	Bifunctional Chiral Thiourea Catalysts	70
2.2.4	Protonated Amine Catalysts	80
2.2.4.1	Guanidium Salts	80
2.2.4.2	Amidinium Salts	82
2.2.4.3	Ammonium Salts	83
2.2.5	Diol Catalysts	83
2.2.6	Phosphoric Acids	90
2.2.7	Novel Phosphoric Acids	97
2.2.8	Summary and Outlook	99
3	Li(I), Na(I), and K(I) Lewis Acids	109
	<i>Tatsushi Imahori</i>	
3.1	Introduction	109
3.2	Alkali Metal Salts as Lewis Acid Reaction Promoter	109
3.2.1	Lewis Acidity of Alkali Metal Salts	109
3.2.2	Application to Organic Synthesis	112
3.2.2.1	Diels–Alder Reaction	112
3.2.2.2	Other Cyclizations	115
3.2.2.3	Allylic Substitutions	115
3.2.2.4	Glycosidation and Other Substitutions	117
3.2.2.5	Aldol Reaction	118
3.2.2.6	Allylation and Other C–C Bond Formations	119
3.2.2.7	Conjugate Addition	120
3.2.2.8	Rearrangement	121
3.2.2.9	Oxirane Ring Opening	123
3.3	Lewis Acid Property of Alkali Metals in Organoalkali Metal Reagents	125
3.3.1	Lewis Acidic Functions of Alkali Metals in Organometallic Bases	126
3.3.2	Lewis Acidic Functions of Alkali Metal in Organometallic Reagents as Nucleophile	128
3.4	Closing Remarks	130
4	Mg(II), Ca(II), and Zn(II) Lewis Acids	135
	<i>Manabu Hatano and Kazuaki Ishihara</i>	
4.1	Introduction	135
4.2	Mg(II)-Catalyzed Reactions	136
4.2.1	Radical Reactions	136
4.2.2	Cycloaddition Reactions	140
4.2.3	Diels–Alder Reactions	142

4.2.4	Aldol Reactions	142
4.2.5	1,2- and 1,4-Addition Reactions	144
4.2.6	Claisen Rearrangement Reactions	147
4.2.7	Baeyer–Villiger Reactions	148
4.3	Ca(II)-Catalyzed Reactions	149
4.4	Zn(II)-Catalyzed Reactions	151
4.4.1	Cycloaddition Reactions	151
4.4.2	Hetero Diels–Alder Reactions	153
4.4.3	Aldol Reactions and Mannich-Type Reactions	154
4.4.4	1,2- and 1,4-Addition Reactions	162
4.4.5	Oxidation and Reduction Reactions	170
4.4.6	Friedel–Crafts Reaction	173
4.4.7	Esterification Reaction	174
4.4.8	Claisen Rearrangement Reactions	174
4.5	Reaction with Mg(II) and Zn(II) Ate Complexes	175
4.5.1	Halogen–Magnesium Exchange Reaction with Mg(II) Ate Complexes	175
4.5.2	Alkyl-Selective Addition to Ketones with Mg(II) Ate Complexes	179
4.5.3	Catalytic Grignard Addition to Ketones and Aldimines by Zn(II) Ate Complexes	181
5	Boron (III) Lewis Acids	187
	<i>Vivek Rauniyar and Dennis G. Hall</i>	
5.1	Introduction	187
5.2	Cycloaddition Reactions	188
5.2.1	Boron Lewis Acid Catalyzed Enantioselective Diels–Alder Reaction	188
5.2.2	Diels–Alder Reaction of Chiral Substrates	194
5.2.3	Chemoselective Diels–Alder Reactions	195
5.3	Other Ring-Forming Reactions	196
5.3.1	[3 + 3] Cycloadditions	196
5.3.2	[4 + 3] Cycloadditions	197
5.3.3	[3 + 2] Cycloadditions	197
5.3.4	Prins-Type Cyclizations	198
5.3.5	Annulations Involving Methylene Cyclopropanes	198
5.3.6	Regio and Stereoselective Cyclizations of 1,2, <i>n</i> -triols	200
5.3.7	Annulation with Allylic Silanes	200
5.3.8	Hetero [2 + 2] Cycloadditions	201
5.3.9	Radical Cyclization Reactions	202
5.3.10	Cyclization of 2-Arylthio-acetophenones	202
5.4	Rearrangements and Isomerization Reactions	203
5.4.1	Rearrangement of Epoxides	203
5.4.2	2,3-Sigmatropic Rearrangement	205
5.4.3	Oxygen-to-Carbon Migration	206
5.4.4	Ferrier Reaction	206

5.4.5	Claisen Rearrangement	207
5.4.6	Pinacol-Type Rearrangement	208
5.4.7	Thermodynamic Rearrangement	208
5.4.8	Isomerization of Thionolactones to Thiolactones	209
5.5	Nucleophilic Additions to Carbonyl and Imine Compounds	209
5.5.1	Aldol and Aldol-Type Reactions	209
5.5.2	Chelate Controlled Reactions	214
5.5.3	Carbonyl and Imine Allylation	215
5.5.4	Other Carbonyl and Imine Activation Chemistries	218
5.6	Miscellaneous Reactions	222
5.6.1	C–H Activation Processes	222
5.6.2	Epoxide Opening Reactions	224
5.6.3	Olefin Cross-Metathesis	225
5.6.4	Cross-Coupling of 1-Aryltriazenes	226
5.6.5	Oxidative Addition of Thiopyridines to Pd(0)	226
5.6.6	Olefin Hydrosilylation	227
5.6.7	Carbonylation Chemistry	227
5.6.8	Catalytic Asymmetric Aziridination	228
5.6.9	Alkylation Chemistry	229
5.6.10	Reactions of Methylene Cyclopropanes	230
5.6.11	Friedel–Crafts Reaction	230
5.6.12	Acetal Substitution and Cleavage Reactions	231
5.6.13	Poly-Condensation Reactions	232
5.6.14	Ring Opening of Cyclic Anhydrides	233
5.6.15	Ozonolysis	233
5.6.16	Atom Transfer	234
5.7	New Types of Boron-Based Lewis Acids	234
5.7.1	Cage-Shaped Borate Esters	234
5.7.2	Photoswitchable Lewis acids	235
5.8	Conclusion	236
6	Al(III) Lewis Acids	241
	<i>Takeo Taguchi and Hikaru Yanai</i>	
6.1	Introduction	241
6.2	Alkylation	241
6.2.1	Activation of C–F Bond Cleavage Through F–Al Interaction	241
6.2.2	Alkynylation of tert-Alkyl Chloride and Bromide	244
6.2.3	Alkylation of Heteroatom Nucleophiles	244
6.3	Friedel–Crafts Reactions	245
6.3.1	Acylation Reaction	245
6.3.2	Alkylation Reaction	247
6.3.3	Hydroxyalkylation and Related Reactions	248
6.4	Aldol Reactions	250
6.4.1	Modes for Coordination of Lewis Acids to Carbonyl Groups and Designed Lewis Acids	250

6.4.2	Asymmetric Aldol Reactions	253
6.5	Ene Reactions	256
6.6	Carbonyl Additions and Related Reactions	260
6.6.1	Alkyl, Alkenyl, and Alkynyl Group Additions	260
6.6.2	Hydrocyanation/Cyanosilylation Reactions	264
6.6.3	Hydrophosphonylation Reaction	271
6.6.4	Meerwein–Ponndorf–Verley Reduction, Oppenauer Oxidation, and Related Reactions	273
6.7	Strained Heterocycles Opening Reactions	279
6.8	Michael Addition Reactions	286
6.9	Cycloaddition Reactions	295
6.9.1	[2 + 1], [2 + 2], and [2 + 3] Cycloaddition Reactions	295
6.9.2	[4 + 2] Cycloaddition Reaction	304
6.9.2.1	Diels–Alder Reaction	304
6.9.2.2	Hetero Diels–Alder Reaction	322
6.10	Claissen Rearrangement	327
6.11	Radical Reactions	331
7	Ga(III) Lewis Acids	347
	<i>Ryo Amemiya and Masahiko Yamaguchi</i>	
7.1	Introduction	347
7.2	Lewis Acid Activation by Interactions with n Electrons	348
7.2.1	Organohalogen Compounds	348
7.2.2	Organooxygen and Organosulfur Compounds	350
7.2.3	Carbonyl and Related Compounds	352
7.2.4	Organometallic Compounds	357
7.3	Lewis Acid Activation by the Interactions with π Electrons	359
7.3.1	Alkynes: π Complexation	359
7.3.2	Alkynes: Carbometallation	363
7.3.3	Arenes	367
7.4	Lewis Acid Activation by Interactions with σ Electrons	367
7.5	Homolysis of Organogallium(III) Compounds	368
7.6	Conclusions	371
8	In(III) Lewis Acids	377
	<i>Guan-Leong Chua and Teck-Peng Loh</i>	
8.1	Introduction	377
8.2	Aldol and Related Reactions	377
8.3	1,2-Additions to Aldehydes, Ketones and their Synthetic Equivalents	381
8.4	1,4-Addition	391
8.5	Additions to $C=N$	396
8.6	Ring Opening of Aziridines and Oxiranes	400
8.7	Other Addition Reactions	403
8.8	Electrophilic Aromatic Substitutions	408

8.9	Nucleophilic Substitutions	413
8.10	Cycloaddition Reactions	421
8.11	Prins-type Cyclizations	427
8.12	Other Cyclization Reactions	432
8.13	Oxidations and Reductions	440
8.14	Protection/Deprotection	443
8.15	Miscellaneous Reactions	446
8.16	Asymmetric Catalysis by Chiral Indium Complexes	454
8.17	Conclusion	458

9	Si(IV) Lewis Acids	469
	<i>Akira Hosomi and Katsukiyo Miura</i>	
9.1	Introduction	469
9.2	Synthetic Use of Silicon Lewis Acids	470
9.3	R ₃ SiX-Promoted Reactions of Acetals and Their Precursors	473
9.3.1	Aldol-Type Reaction with Silyl Enolates	473
9.3.2	Hosomi–Sakurai Allylation and Related Reactions	475
9.3.3	Reactions with Other Carbon Nucleophiles	478
9.3.4	Reactions with Heteroatom and Hydride Nucleophiles	483
9.4	R ₃ SiX-Promoted Reactions of Carbonyl Compounds	485
9.4.1	Mukaiyama Aldol Reactions of Aldehydes and Ketones	485
9.4.2	Hosomi–Sakurai Allylation of Carbonyl Compounds	489
9.4.3	Reactions of Carbonyl Compounds with Other Carbon Nucleophiles	490
9.4.4	Cycloaddition Reactions	492
9.4.5	Reactions of Carbonyl Compounds with Heteroatom Nucleophiles	493
9.5	R ₃ SiX-Promoted Reactions of Imines, Aminoacetals, and Related Compounds	496
9.6	R ₃ SiX-Promoted Reactions of Ethers, Esters, Alcohols, and Halides	499
9.7	Other R ₃ SiX-Promoted Reactions	502
9.8	Strained Organosilicon Lewis Acids	503
9.9	Silicon Lewis Acids Activated by Lewis Bases	506
9.10	Concluding Remarks	509

10	Sn(II) and Sn(IV) Lewis Acids	517
	<i>Isamu Shiina and Hiroki Fukui</i>	
10.1	Introduction	517
10.2	Cycloadditions	517
10.2.1	Diels–Alder Reaction	517
10.2.2	Hetero Diels–Alder Reaction	520
10.2.3	Domino Diels–Alder/Prins/Pinacol Reactions	521
10.2.4	[2 + 2] Cyclization	521
10.2.5	Tandem [4 + 2]/[3 + 2] Cyclization	521

10.3	Ring-Opening Reactions and Rearrangements	523
10.3.1	Ring-Opening Reaction of Methylene cyclopropanes	523
10.3.2	Ring-Opening Reaction of Epoxides	526
10.3.3	Ring-Opening Reaction of Aziridines	528
10.4	Olefin Activation Reactions	528
10.4.1	Functionalization of Olefins	528
10.4.2	Protonation	530
10.4.3	Tandem Cyclization of Polyenes	530
10.5	Carbonyl Activation Reactions Including Mukaiyama-Type Reactions	532
10.5.1	Prins Reaction	532
10.5.2	Allonate/Claisen Tandem Reaction	533
10.5.3	Michael Addition	533
10.5.4	Allylation	534
10.5.5	Aldol Reaction	537
10.6	Other Reactions	545
10.6.1	Reduction	545
10.6.2	Hydride Transfer Reaction	545
10.6.3	Baeyer–Villiger Oxidation	545
10.6.4	Ester Formation	546
10.7	Conclusions	547

Volume 2

11	Bismuth (III) Lewis Acids	551
	<i>Hafida Gaspard-Illoughmane and Christophe Le Roux</i>	
11.1	Introduction	551
11.2	Nucleophilic Additions	552
11.2.1	Allylation Reactions	552
11.2.1.1	Bromoallylation of Aldehydes	552
11.2.1.2	Allylation of Carbonyl Compounds Mediated by Nanometer-Sized Bismuth	553
11.2.1.3	Stereochemistry of the 1,2-Allylation of Cyclohexanones	553
11.2.1.4	Direct Deoxygenative Allylation of Substituted Benzylic Alcohols	553
11.2.1.5	Remote Stereocontrol of Allylation of Aldehyde	553
11.2.2	Michael Addition	554
11.2.2.1	Addition of Pyrrole to Electron-Deficient Olefins	554
11.2.2.2	Versatile Michael Reactions	555
11.2.2.3	Formation of Heterocycles Using Michael Reaction	555
11.2.3	Mannich-Type Reactions	555
11.2.3.1	Homo Mannich-Type reactions	556
11.2.4	Mukaiyama Aldol Reaction	556
11.2.5	Various Multicomponent Synthesis	557
11.2.5.1	The Biginelli Reaction	557

11.2.5.2	One-Pot Multicomponent Synthesis of β -Acetamido Ketones	558
11.2.5.3	Synthesis of α -Amino Phosphonates	558
11.2.5.4	Synthesis of α -Aminonitriles: The Strecker Reaction	558
11.2.6	Synthesis of 2,3-Unsaturated Glycopyranosides (Ferrier Reaction)	559
11.2.7	Synthesis of Pyrrole-Substituted Indolinones	559
11.2.8	Conversion of Thiocarbonyls to their Carbonyl Compounds	559
11.2.9	Reductive Etherification of Carbonyl Compounds with Alcohols	560
11.3	Cyclization Reactions	560
11.3.1	Diels–Alder and Hetero Diels–Alder Reactions	560
11.3.1.1	Stereoselective Synthesis of Furo[2',3':5,6] Pyrano [4,3-b] Quinoline	560
11.3.1.2	One-Pot Stereoselective Synthesis of Octahydroacridines	561
11.3.2	Intramolecular Cyclization	562
11.3.2.1	Synthesis of 4-Chlorotetrahydropyrans (Prins Reaction)	562
11.3.2.2	Synthesis of Highly Functionalized Bicyclo[m.n.l]Alkanones	563
11.3.2.3	Synthesis of Benzimidazole	563
11.3.2.4	Isomerisation of 2'-Hydroxy-substituted Chalcones to Flavanones	563
11.3.2.5	Reductive Etherification	564
11.4	Electrophilic Additions	565
11.4.1	Alkylation Reactions	565
11.4.2	Acylation and Related Reactions	566
11.5	Rearrangements	567
11.5.1	Fries Rearrangement and Related Reactions	567
11.5.2	Claisen Rearrangement	568
11.5.3	Beckmann Rearrangement	568
11.5.4	Rearrangement of Epoxides	569
11.5.5	Allylic Rearrangement of Glycols (or Ferrier Rearrangement)	569
11.6	Ring Opening Reactions	569
11.6.1	Ring Opening of Methylenecyclopropanes	569
11.6.2	Aminolysis of Epoxides	569
11.6.3	Reaction of Nitriles with Epoxides	570
11.6.4	Alcoholysis of Epoxides	571
11.6.5	Thiolysis of Epoxides	571
11.6.6	Aminolysis of Aziridines	572
11.6.7	Thiolysis of Aziridines	572
11.6.8	O-Acylative Cleavage of Tetrahydrofurans	572
11.7	Protection and Deprotection	573
11.7.1	Protection of the Hydroxyl Group, Diols, and Phenols	573
11.7.1.1	Methoxymethylation of Alcohols	573
11.7.1.2	Formation, Cleavage, and Conversion of Tetrahydropyranyl (THP) Ethers	573
11.7.1.3	Cleavage and Conversion of Silyl Ethers	573
11.7.1.4	Cleavage of Trityl Ethers	574
11.7.1.5	Acylation of Alcohols and Phenols	574
11.7.1.6	Protection for 1,2-, 1,3- α,ω -Diols and Diphenols	574

11.7.2	Protection of the Carbonyl Group	574
11.7.2.1	Acetals and Thioacetals	574
11.7.2.2	Formation and Cleavage of Acylals	575
11.7.2.3	Cleavage of Ketoximes and Semicarbazones	575
11.7.3	Protection of the Thiol Group	575
11.7.4	Protection of the Amino Group	575
11.8	Oxidation and Reduction Reaction	576
11.8.1	Oxidation Reactions	576
11.9	Miscellaneous Reactions	578
11.9.1	Polymer Synthesis	578
11.9.2	Synthesis of Amides via Ritter Reaction	578
11.9.3	Hydroarylation of Alkenes	578
11.9.4	Intermolecular Hydroamination of 1,3-Dienes	580
11.9.5	Catalytic Guanylation of Thioureas	581
11.9.6	Catalytic Halogenation of Alcohols and their Silylated Derivatives	581
11.10	Green Conditions Involving Bismuth(III) Salts	581
11.10.1	Polymer-Supported Bismuth(III) Triflate	581
11.10.2	Bismuth(III) Salts in Ionic Liquids	581
11.11	Conclusion	582

12 Scandium and Yttrium 589

Chikako Ogawa, Yanlong Gu, Marine Boudou and Shū Kobayashi

12.1	Achiral Reactions in Organic Solvent or Solvent-Free Conditions	589
12.1.1	Aldol Reactions	589
12.1.2	Mannich-Type Reactions	590
12.1.3	Allylation Reactions	591
12.1.4	Michael Reactions	592
12.1.5	Cyanation Reactions	593
12.1.6	Ring-Opening Reactions	593
12.1.7	Diels–Alder Reactions	594
12.1.8	Other Cyclization Reactions	597
12.1.9	Friedel–Crafts-type Reactions	598
12.1.10	Multicomponent Reactions	600

	<i>Yu Yuan, Kuiling Ding and Gang Chen</i>	
14.1	Introduction	721
14.2	Alkylation, Alkynylation, Vinylation, and Arylation	722
14.3	Allylation	732
14.4	Aldol Reaction	739
14.5	Carbonyl-Ene Reaction	747
14.6	Cycloaddition Reactions	753
14.6.1	Diels–Alder Reaction	753
14.6.2	Hetero Diels–Alder Reaction	756
14.6.3	[3 + 2] Cycloadditions	763
14.6.4	[2 + 2] Cycloaddition	765
14.6.5	Cyclopropanation	767
14.7	Cyanation	768
14.8	Ring-Opening of Epoxides	777
14.9	Friedel–Crafts Reaction	780
14.10	Baylis–Hillman Reaction	781
14.11	Epoxidation	782
14.12	Sulfoxidation	786
14.13	Halogenation	790
14.14	Reduction	792
14.15	Hydroamination	794
14.16	Miscellaneous	801
14.17	Summary and Outlook	805
15	Zr(IV) and Hf(IV) Lewis Acids	825
	<i>Ken-ichiro Kanno and Tamotsu Takahashi</i>	
15.1	Introduction	825
15.2	Aldol Reactions	825
15.2.1	Zirconium Enolates	825
15.2.2	Mukaiyama Aldol	828
15.2.3	Mannich and the Related Reactions	830
15.2.4	Other Aldol-Type Reactions	832
15.3	Friedel–Crafts Reactions	834
15.4	Allylations with Allylstannanes	837
15.5	Ring Opening of Three-Membered Cyclic Compounds	839
15.6	Pericyclic Cycloadditions	842
15.7	Carbometalations	846
15.8	Functional Group Transformations	849

16	Transition-Metal Lewis Acids: From Vanadium to Platinum	859
	<i>Seiji Iwasa and Hisao Nishiyama</i>	
16.1	Introduction	859
16.2	Carbon–Carbon Bond-Forming Reactions	860
16.2.1	Aldol Reactions	860
16.2.2	Diels–Alder Reactions	861
16.2.3	1,3- Dipolar Cycloadditions	874
16.2.4	Other Addition and Cyclization Reactions	877
16.3	Carbon–Heteroatom Bond-Forming or Cleaving Reactions	891
16.3.1	Reactions of Ethers, Acetals, and Acids	891
16.3.2	Reactions of Epoxides and Aziridines	893
16.3.3	Other Reactions	895
16.4	Conclusion	897
17	Cu(I) and Cu(II) Lewis Acids	903
	<i>Levi M. Stanley and Mukund P. Sibi</i>	
17.1	Introduction	903
17.2	Friedel–Crafts Reactions	905
17.3	Claisen Rearrangements	908
17.4	Free-Radical Reactions	909
17.5	Nucleophilic Addition to C=O and C=N Double Bonds	911
17.5.1	Aldol Reactions	911
17.5.2	Mannich-Type Reactions	919
17.5.3	Nitroaldol/NitroMannich Reactions (Henry/Aza-Henry Reactions)	926
17.5.4	Addition of Acetylenes to Imines	930
17.5.5	Addition of Acetylenes to Ketones	935
17.5.6	Allylations	935
17.6	Conjugate Additions	938
17.6.1	Conjugate Addition of Carbon Nucleophiles	938
17.6.2	Conjugate Addition of Nitrogen Nucleophiles	942
17.7	Cycloadditions	943
17.7.1	Diels–Alder Cycloadditions	943
17.7.2	Hetero Diels–Alder Reactions	953
17.7.3	[3 + 2], [2 + 2], and [4 + 3] Cycloaddition Reactions	958
17.8	Ene Reactions	970
17.9	Nazarov Cyclization	972
17.10	Alkylation, Amination, and Halogenation	973
17.11	Transfer Hydrogenation	976
17.12	Asymmetric Benzoylation	978
17.13	Theoretical Methods	978
17.14	Conclusions	980
18	Ag(I), Au(I), and Au(III) Lewis Acids	987
	<i>Akira Yanagisawa</i>	
18.1	Introduction	987

18.2	Achiral Silver(I)-Catalyzed Carbon–Carbon Bond Forming Reactions	987
18.3	Chiral Phosphine–Silver(I) Complex-Catalyzed Asymmetric Reactions	992
18.4	Gold(I) and Gold(III)-Catalyzed Carbon–Carbon Bond Forming Reactions	1004
18.5	Summary and Conclusions	1011
19	Polymer-Supported Metal Lewis Acids	1019
	<i>Shinichi Itsuno</i>	
19.1	Introduction	1019
19.2	Boron-Containing Polymeric Lewis Acid	1020
19.2.1	Side Chain Boron Polymers	1020
19.2.2	Polystyrene-Supported Chiral Oxazaborolidine Derivatives	1022
19.2.3	Main-Chain Boron Polymer	1026
19.2.4	Dendritic Polymer-Supported B(C ₆ F ₅) ₂	1028
19.3	Polymer-Supported Aluminum Lewis Acids	1029
19.3.1	Polystyrene-Supported AlCl ₃	1029
19.3.2	Polystyrene-Supported Al(OTf) ₃	1032
19.3.3	JandaJel-supported BINOL–AlCl ₃	1033
19.3.4	Silica-Supported AlCl ₃	1034
19.4	Polymer-Supported Sc Lewis Acids	1035
19.4.1	Polymer-Supported Sc Catalyst in Water	1035
19.4.2	Nanostructured, Polymer-Supported Sc(III) Catalyst	1036
19.4.3	Organo-Inorganic Hybrid Polymer	1038
19.4.4	Microencapsulated Sc(OTf) ₃	1038
19.4.5	Polymer-Micelle Incarcerated Sc(OTf) ₃	1039
19.5	Polymer-Supported Ti Lewis Acids	1040
19.5.1	Polymer-Supported Diol–Ti Complex	1040
19.5.2	Polymer-Supported BINOL–Ti	1041
19.5.3	Polystyrene-Supported Ti–TADDOLate	1043
19.5.4	Polymeric Monolith Ti–TADDOLate	1046
19.5.5	Polystyrene-Supported Chiral Bissulfonamide-Ti	1046
19.5.6	Polystyrene-Supported Chiral N-Sulfonylamino Alcohol–Ti	1048
19.6	Polymer-Supported Fe Lewis Acids	1049
19.7	Polymer-Supported Cu Lewis Acids	1050
19.8	Polymer-Supported Zn Lewis Acids	1051
19.9	Polymer-Supported in Lewis Acids	1052
19.10	Polymer-Supported Sn Lewis Acids	1053
19.11	Polymer-Supported Yb Lewis Acids	1054
