Fluctuations in Markov Processes

Time Symmetry and Martingale Approximation

Springer

Contents

Part I General Theory

1 A Warming-Up Example 3
1.1 Ergodic Markov Chains 4
1.2 Almost Sure Central Limit Theorem for Ergodic Markov Chains 6
1.3 Central Limit Theorem for Martingales 9
1.4 Time-Variance in Reversible Markov Chains 13
1.5 Central Limit Theorem for Reversible Markov Chains 17
1.6 The Space of Finite Time-Variance Functions 21
1.6.1 The Space $\mathscr{H}_1$ 21
1.6.2 The Space $\mathscr{H}_{-1}$ 24
1.7 Comments and References 28
References 30

2 Central Limit Theorems 33
2.1 Central Limit Theorem for Continuous Time Martingales 36
2.2 The Spaces $\mathscr{H}_1$ and $\mathscr{H}_{-1}$ 40
2.3 The Resolvent Equation 45
2.4 Dynkin's Martingales 46
2.5 $\mathscr{H}_{-1}$ Estimates of the Time-Variance 47
2.6 Central Limit Theorem for Markov Processes 50
2.7 Some Examples 56
2.7.1 Reversibility 56
2.7.2 Spectral Gap 57
2.7.3 Sector Condition 57
2.7.4 Graded Sector Condition 59
2.7.5 Perturbations of Normal Operators 68
2.8 Invariance Principles in the Multidimensional Case 70
2.8.1 Martingales with Stationary Increments 70
2.8.2 Additive Functionals of Markov Processes 73

2.9 Comments and References . . . 76
References . . . 78

3 Random Walks in Random Environment . . . 81
3.1 Random Walks with Random Conductances . . . 82
3.2 Doubly Stochastic Random Walks . . . 89
3.3 Cyclic Random Walks . . . 95
3.4 Random Walks with Drift in $\mathscr{H}_{-1}$ . . . 100
3.4.1 The Corrector Field . . . 102
3.4.2 An Elliptic Equation for the Corrector Field . . . 107
3.4.3 The Energy Identity . . . 109
3.5 Random Walks in Mixing Environments . . . 115
3.6 Doubly Stochastic Random Walks in Dimension $d = 1$ . . . 121
3.7 Symmetric Random Walks . . . 126
3.8 Comments and References . . . 133
References . . . 134

4 Bounds and Variational Principles for the Asymptotic Variance . . . 137
4.1 Quadratic Functional of the Resolvent . . . 137
4.2 Bounds and Variational Formulas for the Variance . . . 143
4.3 Variational Principles in the Graded Sector Context . . . 147
4.4 Estimates of the Variance . . . 148
4.5 Comments and References . . . 151
References . . . 151

Part II Simple Exclusion Processes

5 The Simple Exclusion Process . . . 155
5.1 Exclusion Processes . . . 157
5.2 Central Limit Theorems for Additive Functionals . . . 161
5.3 The Mean Zero Asymmetric Case . . . 162
5.4 Duality . . . 171
5.5 The Asymmetric Case, $\alpha = 1/2$ . . . 178
5.6 The Asymmetric Case, $\alpha \neq 1/2$ . . . 182
5.7 Transient Markov Processes . . . 188
5.8 Comments and References . . . 192
References . . . 195

6 Self-diffusion . . . 199
6.1 The Exclusion Process as Seen from a Tagged Particle . . . 200
6.2 Elementary Martingales . . . 204
6.3 The Spaces $\mathscr{H}_1$ and $\mathscr{H}_{-1}$ . . . 208
6.4 Law of Large Numbers . . . 210
6.5 Central Limit Theorem . . . 210
6.6 The Mean Zero Asymmetric Case . . . 214
6.7 Duality . . . 216
6.8 The Asymmetric Case in Dimension $d \geq 3$ . . . 220

6.9 The Self-diffusion Matrix . . . 233
6.10 Comments and References . . . 236
References . . . 239

7 Equilibrium Fluctuations of the Density Field . . . 241
7.1 Duality . . . 248
7.2 Approximations in $\mathscr{H}_{0,-1}$ . . . 253
7.3 The Fluctuation–Dissipation Theorem . . . 257
7.4 The Second Class Particle . . . 263
7.5 Estimates on the Operators $\mathfrak{L}_{\theta,s,2}$, $\mathfrak{L}_{\star,a}$ and $\mathfrak{J}_{\star,\pm}$ . . . 266
7.6 Comments and References . . . 272
References . . . 273

8 Regularity of the Asymptotic Variance . . . 275
8.1 The Resolvent Equation . . . 276
8.2 The Symmetric Case . . . 279
8.3 The Mean Zero Case . . . 280
8.4 The Asymmetric Case in $d \geq 3$ . . . 284
8.5 Regularity of the Diffusion Coefficients . . . 287
8.6 Comments and References . . . 288
References . . . 289

Part III Diffusions in Random Environments

9 Diffusions in Random Environments . . . 293
9.1 Diffusions with Periodic Coefficients . . . 293
9.2 Remark About the Quasi-periodic Case . . . 299
9.3 Diffusions with Stationary Coefficients . . . 301
9.3.1 Preliminaries on Stationary Environments . . . 302
9.3.2 Spaces of Smooth Functions . . . 304
9.3.3 Itô Equations with Stationary Coefficients . . . 305
9.4 Environment Process and Its Properties . . . 307
9.5 Martingale Decomposition and Central Limit Theorem . . . 310
9.6 Homogenization of Solutions of Parabolic Partial Differential Equations . . . 313
9.6.1 Random Coefficient Case . . . 314
9.6.2 Periodic Case . . . 316
9.7 Proofs of Propositions 9.8 and 9.9 . . . 317
9.7.1 Proof of Proposition 9.8 . . . 318
9.7.2 Proof of Proposition 9.9 . . . 319
9.8 One-Dimensional Case . . . 321
9.9 Diffusions with Time Dependent Coefficients . . . 322
9.9.1 Space-Time Stationary Environments . . . 322
9.9.2 Central Limit Theorem . . . 326
9.10 Comments and References . . . 327
References . . . 328

10 Variational Principles for the Limiting Variance 331
10.1 Spaces of Vector Fields 331
10.2 Upper Bound 334
10.3 Lower Bound 339
10.4 Spectral Representation of Homogeneous Fields 341
10.5 Comments and References 343
References 343

11 Diffusions with Divergence Free Drifts 345
11.1 Passive Tracer Model 345
11.2 Properties of the Flow and the Definition of the Stream Matrix . . 345
11.3 Central Limit Theorem for a Diffusion with Bounded Stream Matrix 348
11.4 Convection Enhanced Diffusions 349
11.5 Time Dependent Flows with Finite Péclet Number 350
11.6 Proof of Theorem 11.4 351
11.6.1 Notation 352
11.6.2 Statements of Some Technical Results 352
11.6.3 Properties of the Environment Process 353
11.6.4 Properties of the $\mathscr{H}_1$-Norm 355
11.6.5 Construction of the Corrector Field 357
11.6.6 Proof of the Energy Identity 363
11.7 Proofs of the Technical Results 367
11.7.1 Proof of Proposition 11.6 367
11.7.2 Proof of Proposition 11.7 367
11.7.3 Proof of Proposition 11.8 369
11.7.4 Proof of Proposition 11.9 369
11.7.5 Ergodic Theorem 370
11.8 Comments and References 371
References 372

12 Diffusions with Gaussian Drifts 375
12.1 Stationary Gaussian Fields 376
12.2 Hermite Polynomials and Graded Structure of $L^2(\mathbb{Q})$ 376
12.3 Environment Process and Its Properties 377
12.4 Central Limit Theorem 381
12.5 Proofs of Technical Results 382
12.5.1 Proof of Estimate (12.2) 382
12.5.2 Proofs of Theorem 12.3 and Proposition 12.4 384
12.6 Superdiffusive Transport in a Flow with Infinite Péclet Number 387
12.6.1 Homogeneous, Isotropic Gaussian Flows 387
12.6.2 Flows with Infinite Péclet Numbers 389
12.7 Central Limit Theorem for Diffusions in Gaussian and Markovian Flows 394
12.8 Markovian Dynamics of the Environment 396

12.8.1 Hermite Polynomials . . . 396
12.8.2 Definition of the Transition Semigroup . . . 397
12.8.3 Properties of the Generator . . . 398
12.8.4 More General Formulation of the Markov Property of the Environment Process . . . 399
12.9 Periodic Approximation of the Flow . . . 400
12.10 Environment Process . . . 403
12.11 Proof of Part (1) of Theorem 12.13 . . . 405
12.12 On Superdiffusive Behavior of a Tracer in an Isotropic Flow . . . 409
12.13 Proof of Part (2) of Theorem 12.13 . . . 413
12.14 Proofs of the Results from Sect. 12.8 . . . 415
12.14.1 Construction of the Semigroup . . . 415
12.14.2 Proof of Proposition 12.16 . . . 420
12.14.3 Proof of Proposition 12.17 . . . 420
12.15 Proofs of the Results from Sect. 12.10 . . . 422
12.15.1 Proof of Proposition 12.19 . . . 422
12.15.2 Proof of Proposition 12.20 . . . 423
12.16 Appendix: Some Auxiliary Results About Gaussian Random Fields . . . 427
12.16.1 Multiple Stochastic Integrals . . . 427
12.16.2 Some Properties of Hermite Polynomials . . . 430
12.17 Comments and References . . . 431
References . . . 433

13 Ornstein–Uhlenbeck Process with a Random Potential . . . 437
13.1 Random Diffusion of a Particle with Inertia . . . 437
13.2 Proof of the Central Limit Theorem . . . 438
13.3 Proof of Proposition 13.2 . . . 445
13.4 Gaussian Bounds on Transition Probability Densities . . . 446
13.5 Comments and References . . . 453
References . . . 454

14 Analytic Methods in Homogenization Theory . . . 455
14.1 G-Convergence of Operators . . . 456
14.2 Γ-Convergence of Quadratic Forms . . . 458
14.3 G-Convergence of Matrix Valued Functions . . . 460
14.4 Application to Homogenization of Diffusions in Random Media . . . 466
14.5 Appendix: Ellipticity of the Coefficient Matrix of a Coercive Form 470
14.6 Comments and References . . . 471
References . . . 472

References . . . 475
