*Preface*

xiii

<b>1. Biomolecular Components of a Biosensor: Fundamentals</b>	<b>1</b>
<i>Kaustubh D. Bhalariao and Goutam J. Nistala</i>	
1.1 What Makes a Biosensor a Biosensor?	2
1.2 The Recognition Layer	3
1.2.1 Proteins	4
1.2.2 Antibodies	5
1.2.3 Nucleic Acids	6
1.2.4 Polysaccharides	8
1.2.5 Other Small Molecules	9
1.3 Bioconjugation	9
1.3.1 Cross-Linkers	11
1.3.2 Development of Novel Recognition Elements	12
1.3.3 Antibody Generation and Processing	12
1.3.4 Molecular Display Techniques	14
1.3.5 Computational Design/Redesign of Binding Interactions	16
1.4 Conclusions and Future Outlook	17
1.4.1 Biorecognition Needs Better Integration with Informatics	18
1.4.2 Standardization of Bioconjugate Chemistry	18
1.4.3 Better Methodologies to Model Reliability and Environmental Impact	18
<b>2. Macromolecule-Imprinted Polymers: Antibody/Receptor Mimics for Protein Recognition and Catalysis</b>	<b>21</b>
<i>Yun Peng, David W. Britt, Marie K. Walsh, and Timothy Doyle</i>	
2.1 Introduction	21
2.1.1 Strategies for Synthesis of Molecularly Imprinted Polymers	22
2.1.2 Small Molecule Imprinting: Validation of Mip Technology	23
2.1.3 Macromolecule Imprinting: Toward Artificial Antibodies and Enzymes	24

2.2	Molecular Imprinting of Proteins	25
2.2.1	Polymers for Protein Imprints	25
2.2.1.1	Acrylamide-based MIPs	25
2.2.1.2	Stimuli-sensitive hydrogel	27
2.2.1.3	Sol-gels	28
2.2.1.4	3-Aminophenylboronic acid-based MIPs	30
2.2.2	Surface Imprinting	31
2.2.2.1	Thin film	31
2.2.2.2	Core-shell microsphere imprinting	33
2.2.2.3	Nanofabricated imprinting	36
2.2.2.4	Epitope imprinting	38
2.3	Applications	40
2.3.1	Analytical Separations	40
2.3.2	Biosensors	42
2.3.3	Artificial Chaperones for Conformational Diseases	43
2.3.4	Enzyme Mimics Using Electromagnetically Activated Au-MIP Nanoparticles	45
2.4	Perspective	48
<b>3.</b>	<b>Chemical and Biological Sensing and Imaging Using Plasmonic Nanoparticles and Nanostructures</b>	<b>59</b>
	<i>Qi Wang and Chenxu Yu</i>	
3.1	Introduction	59
3.2	Theoretical Background of nanoSPR	60
3.3	Synthesis, Fabrication, and Functionalization of Plasmonic Nanostructures	65
3.3.1	Wet-Chemistry Synthesis	65
3.3.2	Lithography	67
3.3.2.1	Top-down lithography	67
3.3.2.2	Colloidal lithography	67
3.3.2.3	Nanosphere lithography	67
3.3.2.4	Soft lithography	68
3.3.3	Functionalization of Plasmonic Nanostructures	69
3.4	Application of nanoSPR in Chemical and Biological Sensing	70
3.4.1	Solution-Based nanoSPR Sensing	70
3.4.1.1	Colorimetric sensing based on particle-particle coupling	70
3.4.1.2	Single-particle nanoSPR sensing	71

3.4.2	Chip-Based nanoSPR Sensing	74
3.4.2.1	Raleigh scattering of nanostructures	74
3.4.2.2	NanoSPR sensors using surface-immobilized nanoparticles	76
3.4.2.3	Nanohole arrays	77
3.4.3	Surface-Enhanced Spectroscopies	79
3.4.4	Plasmonic Sensing Beyond the Diffraction Limit	80
3.5	Conclusions and Future Perspectives	80
<b>4.</b>	<b>Surface-Raman Scattering for Medical Applications</b>	<b>97</b>
	<i>Mustafa Çulha</i>	
4.1	Introduction	97
4.2	Introduction to Raman Scattering and Surface-Enhanced Raman Scattering	97
4.3	Applications of SERS in Biomedical Sciences and Medicine	100
4.3.1	Protein Detection	100
4.3.2	DNA Detection	104
4.3.3	Cellular Applications	107
4.3.4	Detection and Identification of Microorganisms	111
4.3.5	Tissue Differentiation	112
4.4	Concluding Remarks and Future Outlook	113
<b>5.</b>	<b>Diagnostic and Therapeutic Applications of Carbon Nanotubes</b>	<b>121</b>
	<i>Balaji Panchapakesan, Thomas Burkhead, Ben King, Peng Xu, James Loomis, and Eric Wickstrom</i>	
5.1	Introduction	121
5.2	Nanotechnology for Cancer	122
5.3	Carbon Nanotubes	125
5.4	Electronic Properties of Carbon Nanotubes	128
5.5	Optical Properties of Carbon Nanotubes	129
5.6	Biological Applications of Carbon Nanotubes	131
5.7	Bioelectronic Devices Based on Carbon Nanotubes	132
5.8	Applications of Nanotube Transistors for Detecting Circulating Cancer Cells	133
5.9	Integrated Molecular Targeting and Selective Photothermal Therapy of Breast Cancer Cells Using Carbon Nanotubes	136
5.10	Conclusions and Future Applications of Carbon Nanotubes for Biomedical	140

<b>6. Graphene for Biosensing Applications</b>	<b>153</b>
<i>Romaneh Jalilian, Luis A. Jauregui, Kyuwan Lee, Yong P. Chen, and Joseph Irudayaraj</i>	
6.1 Introduction	153
6.2 Fabrication of Graphene-Based Materials and Devices	155
6.2.1 Graphene Materials Fabrication	155
6.2.2 Graphene Device Fabrication	157
6.3 Basic Properties of Graphene	158
6.3.1 Electrical Properties	159
6.3.2 Optical Properties	165
6.3.3 Other Properties	169
6.4 Biosensing Applications of Graphene	171
6.4.1 Electrical Sensing	171
6.4.1.1 Gas sensing	171
6.4.1.2 Metal doping	171
6.4.1.3 Chemical and biosensing in electrolytes and other liquids	172
6.4.1.4 Biosensor device	174
6.4.2 Optical Sensing	175
6.5 Closing Remarks and Future Work	179
<b>7. Single-Molecule Fluorescence Spectroscopy Techniques for Biomedicine</b>	<b>187</b>
<i>Jose M. Moran-Mirabal, Harold G. Craighead, and Larry P. Walker</i>	
7.1 Single-Molecule Fluorescence Spectroscopy Fundamentals	188
7.1.1 Why Single-Molecule Fluorescence Spectroscopy?	188
7.1.2 Fluorescence Principles and Properties	190
7.1.3 Dye Characteristics and Background Considerations for Successful SMFS	193
7.2 Experimental Implementations of SMFS Techniques	196
7.2.1 Widefield Techniques	196
7.2.1.1 Epifluorescence microscopy	197
7.2.1.2 Total internal reflection fluorescence microscopy	197
7.2.2 Point-Detection Techniques	200
7.2.2.1 Confocal microscopy	200
7.2.2.2 Photon-counting histogram and fluorescence correlation spectroscopy	201
7.2.2.3 Near-field scanning optical microscopy	206
7.3 Observables Measured with SMFS Techniques	206

7.3.1	Polarization: Local Orientation of Molecules	206
7.3.2	Conformation and Dynamics of Molecules: Short Range Distances	208
7.3.3	Molecular Displacement: SM Tracking	211
7.3.4	Diffusion, Binding, and Aggregation: Coincidence, Correlations	214
7.4	Micro- and Nanostructured Surfaces for SMFS	219
7.4.1	Micro- and Nanofluidic Slits and Channels	219
7.4.2	Zero-Mode Waveguides for SMFS at High Concentrations	222
7.4.3	Solid-State Nanopores	225
7.5	Potential Biomedical SMFS Applications	225
<b>8.</b>	<b>Particle Engineering for Inhalational Drug Delivery</b>	<b>241</b>
	<i>Basma Ibrahim, Yan Yang, and Yoon Yeo</i>	
8.1	Dry Particles for Inhalational Therapy	242
8.1.1	Inhalable Drug-Delivery Systems	242
8.1.1.1	Pressurized metered dose inhaler	242
8.1.1.2	Nebulizer	242
8.1.1.3	Dry-powder inhaler	243
8.1.2	Dry-Powder Inhaler Devices	243
8.1.3	Requirements of Inhalable Dry Particles	244
8.1.4	Dry Particle Formulations	244
8.2	Traditional Particle Manufacturing for Inhalational Drug Delivery	245
8.2.1	Micronization	246
8.2.2	Crystallization and Precipitation	246
8.2.3	Spray Drying	247
8.2.4	Spray Freeze-Drying	248
8.2.5	Supercritical Fluid Technology	248
8.2.6	Large Porous/Hollow Particles	249
8.2.6.1	Spray drying	249
8.2.6.2	Emulsification techniques	250
8.3	NPs for Inhalational Drug Delivery	251
8.3.1	NPs for Pulmonary Drug Delivery	251
8.3.2	Nebulizer, a Conventional Way of Delivering NPs to the Lungs	251
8.3.3	Current Approaches for Dry Inhalable Nanomedicine	253
8.3.3.1	NPs delivered as spray-dried microparticles	253

8.3.3.2	NP agglomerates by controlled flocculation	256
8.3.3.3	NP as a dispersant of microparticles	256
8.3.4	Further Consideration of Inhalable NPs	257
8.3.4.1	General mechanisms of NP toxicity	257
8.3.4.2	Factors affecting the toxic effects of NP on pulmonary tissues	258
8.3.4.3	Toxicity of inhalable NP	258
8.4	Conclusions	259
<b>9.</b>	<b>Devices and Sensors for Bioelectric Monitoring and Stimulation</b>	<b>273</b>
	<i>Benjamin Moody, Mathew K. Zachek, and Gregory S. McCarty</i>	
9.1	Introduction	273
9.1.1	History	273
9.1.2	Perspective	274
9.2	Electrode Basics	275
9.3	Electrochemical Measurements	277
9.3.1	Static Electrochemical Methods	278
9.3.2	Dynamic Electrochemical Methods	278
9.3.2.1	Constant potential measurements	278
9.3.2.2	Dynamic potential measurements	279
9.3.3	Other Methods of Detection	279
9.3.3.1	Electrophysiology	279
9.3.3.2	Conductometry	280
9.4	Biosensor Electrodes	280
9.4.1	Biocatalytic and Bioaffinity Sensors	280
9.4.2	Immobilization of Biological Recognition Elements	281
9.5	Advances in Electrodes for Biological Measurements	281
9.5.1	Overview	281
9.5.1.1	Advantages of microelectrodes	281
9.5.1.2	Advantages of nanoelectrodes	283
9.5.2	Advances in Gold Electrodes	283
9.5.2.1	Overview	283
9.5.2.2	Gold nanoparticles and clusters	284
9.5.2.3	Nanowires and nanotubes	285
9.5.2.4	Nanogap electrodes	286
9.5.2.5	Nanowells	287
9.5.3	Silver	288

9.5.4	Miscellaneous Metal Electrodes	289
9.5.5	Carbon Electrodes	289
9.5.5.1	CNT electrodes	290
9.5.6	Electrode Arrays	292
9.5.6.1	Metal electrode arrays	292
9.5.6.2	Carbon nanofiber arrays	293
9.6	Applications in the Brain	294
9.6.1	Neurophysiology	294
9.6.2	Abnormal Brain Conditions and Pathology	294
9.6.3	Neuromodulation and Interfacing	295
9.6.3.1	Deep-brain stimulation	295
9.6.3.2	Computer/brain interfacing	297
9.6.3.3	Neuroprosthetics	297
9.7	Applications to the Heart and Muscles	297
9.7.1	Cardiophysiology	298
9.7.2	Electrochemistry and Stimulation	298
9.8	Conclusion	299
<b>10.</b>	<b>Microelectromechanical Systems for <i>in vivo</i> Therapeutics</b>	<b>307</b>
	<i>Masaru P. Rao</i>	
10.1	Introduction	308
10.2	Advantageous Features of MEMS	308
10.3	The MEMS “Tool Kit”: Common MEMS Materials and Fabrication Techniques	310
10.3.1	MEMS Fabrication Routes: Surface vs. Bulk Micromachining	310
10.3.2	Typical Substrate Materials	313
10.3.3	Thin-Film Deposition	315
10.3.4	Photolithography	317
10.3.5	Etching	317
10.3.6	Wafer Bonding	320
10.3.7	Alternative Microfabrication Techniques	322
10.3.7.1	Polymeric micromolding/casting	322
10.3.7.2	Electroplating-based approaches	323
10.3.8	Packaging and Biocompatibility Considerations	324
10.4	Selected Examples of Application Areas within <i>in vivo</i> Therapeutics	326
10.4.1	Drug Delivery	327
10.4.2	Microsurgery	329

10.4.3	Endovascular Intervention	330
10.5	<i>In vivo</i> Therapeutic MEMS Enabled by Titanium Micromachining	332
10.5.1	Titanium Micromachining	333
10.5.2	Robust Microneedles for Insulin Delivery	335
10.5.3	Robust Neuroprostheses	337
10.5.4	Rationally Designed Nanopatterned Stents	338
10.6	Conclusions and Outlook	340
<b>11.</b>	<b>Implantable Electrochemical Biosensors: A Perspective</b>	<b>349</b>
	<i>Sridhar Govindarajan and Bella B. Manshian</i>	
11.1	Introduction	350
11.2	<i>In vivo</i> Monitoring — Challenges and Progress	351
11.2.1	Electrochemical Biosensors	351
11.2.2	Design Aspects for <i>in vivo</i> Monitoring	352
11.2.2.1	Physical aspects	353
11.2.2.2	Performance factors	357
11.2.2.3	Additional considerations	363
11.3	Conclusions	367
	<i>Index</i>	375
