

Ocean Acidification

EDITED BY

Jean-Pierre Gattuso

Senior Research Scientist at Centre National de la Recherche Scientifique (CNRS) and Université Pierre et Marie Curie – Paris 6, France

Lina Hansson

Project Manager EPOCA (European Project on Ocean Acidification), Centre National de la Recherche Scientifique (CNRS), France

OXFORD
UNIVERSITY PRESS

Contents

Foreword	v
<i>Wallace S. Broecker</i>	
Preface	vii
List of abbreviations	xiii
List of contributors	xvii
1 Ocean acidification: background and history	1
<i>Jean-Pierre Gattuso and Lina Hansson</i>	
1.1 Introduction	1
1.2 What is ocean acidification?	2
1.3 The biological and biogeochemical processes that are potentially affected	5
1.4 A short history of ocean acidification research	6
1.5 Risks and policy implications	13
1.6 Conclusions	16
1.7 Acknowledgements	17
2 Past changes in ocean carbonate chemistry	21
<i>Richard E. Zeebe and Andy Ridgwell</i>	
2.1 Introduction	21
2.2 Seawater carbonate chemistry	22
2.3 Controls on ocean carbonate chemistry	23
2.4 Long-term changes during earth's history (quasi-steady states)	27
2.5 Ocean acidification events in earth's history	33
2.6 Conclusions	36
2.7 Acknowledgements	37
3 Recent and future changes in ocean carbonate chemistry	41
<i>James C. Orr</i>	
3.1 Introduction	41
3.2 Basic chemistry under change	41
3.3 Atmospheric CO ₂ emissions, sources, and sinks during the industrial era	45
3.4 Observed changes in ocean carbonate chemistry during recent decades	45
3.5 Future scenarios	47
3.6 Projecting future changes in carbonate chemistry	48
3.7 Conclusions	61
3.8 Acknowledgements	63

4	Skeletons and ocean chemistry: the long view	67
	<i>Andrew H. Knoll and Woodward W. Fischer</i>	
4.1	Introduction	67
4.2	A record of atmospheric $p\text{CO}_2$ and past global change	67
4.3	Is there a more general historical pattern?	74
4.4	Summary, with lessons for the future	78
4.5	Acknowledgements	79
5	Effects of ocean acidification on the diversity and activity of heterotrophic marine microorganisms	83
	<i>Markus G. Weinbauer, Xavier Mari, and Jean-Pierre Gattuso</i>	
5.1	Introduction	83
5.2	Microbes in the ocean	83
5.3	Ocean acidification: approaches and evidence	88
5.4	Implications	93
5.5	Acknowledgements	95
6	Effects of ocean acidification on pelagic organisms and ecosystems	99
	<i>Ulf Riebesell and Philippe D. Tortell</i>	
6.1	Introduction	99
6.2	Planktonic processes and the marine carbon cycle	99
6.3	Direct effects of ocean acidification on planktonic organisms	102
6.4	Synergistic effects of ocean acidification with other environmental changes	110
6.5	Ecological processes and biogeochemical feedbacks	111
6.6	Critical information gaps	115
6.7	Acknowledgements	116
7	Effects of ocean acidification on benthic processes, organisms, and ecosystems	122
	<i>Andreas J. Andersson, Fred T. Mackenzie, and Jean-Pierre Gattuso</i>	
7.1	Introduction	122
7.2	The effect of ocean acidification on major biogeochemical processes	122
7.3	Effect of ocean acidification on benthic organisms, communities, and ecosystems	143
7.4	Conclusions and final remarks	149
7.5	Acknowledgements	150
8	Effects of ocean acidification on nektonic organisms	154
	<i>Hans-O. Pörtner, Magda Gutowska, Atsushi Ishimatsu, Magnus Lucassen, Frank Melzner, and Brad Seibel</i>	
8.1	Integrative concepts relevant in ocean acidification research	154
8.2	Effects of ocean acidification on fishes	159
8.3	Effects of ocean acidification on cephalopods	164
8.4	Conclusions and perspectives	169

9	Effects of ocean acidification on sediment fauna	176
	<i>Stephen Widdicombe, John I. Spicer, and Vassilis Kitidis</i>	
9.1	Introduction	176
9.2	Distribution of carbon dioxide (CO ₂) and pH within sediments	176
9.3	The impact of macrofaunal activity on microbially driven geochemical processes	180
9.4	Sediment fauna as ‘ecosystem engineers’	181
9.5	Assessing the potential impacts of ocean acidification on infaunal organisms	182
9.6	Summarizing the vulnerability of infaunal organisms to ocean acidification	186
9.7	Conclusions	187
9.8	Acknowledgements	187
10	Effects of ocean acidification on marine biodiversity and ecosystem function	192
	<i>James P. Barry, Stephen Widdicombe, and Jason M. Hall-Spencer</i>	
10.1	Introduction	192
10.2	Biodiversity and ecosystem function	193
10.3	Acclimatization and adaptation	194
10.4	Effects of environmental change	195
10.5	The effects of ocean acidification on organisms	196
10.6	Habitats	198
10.7	Implications of biodiversity loss	204
10.8	Conclusion	206
10.9	Acknowledgements	206
11	Effects of ocean acidification on the marine source of atmospherically active trace gases	210
	<i>Frances Hopkins, Philip Nightingale, and Peter Liss</i>	
11.1	Introduction	210
11.2	Effects of ocean acidification on DMS production and its impact on climate	213
11.3	Impacts of ocean acidification on organohalogen production and atmospheric chemistry	219
11.4	Conclusions and future research needs	224
11.5	Acknowledgements	226
12	Biogeochemical consequences of ocean acidification and feedbacks to the earth system	230
	<i>Marion Gehlen, Nicolas Gruber, Reidun Gangstø, Laurent Bopp, and Andreas Oschlies</i>	
12.1	Introduction	230
12.2	The marine carbon cycle	233
12.3	The marine nitrogen cycle	240
12.4	The ocean as a source of atmospherically active trace gases	244
12.5	Conclusion and perspectives	245
12.6	Acknowledgements	245
13	The ocean acidification challenges facing science and society	249
	<i>Carol Turley and Kelvin Boot</i>	
13.1	Introduction	249
13.2	Why society should be concerned about ocean acidification	250
13.3	Valuing the oceans	251
13.4	The relevance of ocean acidification to individuals	257
13.5	Communicating ocean acidification to policy- and decision-makers	259
13.6	Wider communication of ocean acidification	263

13.7	The response of policymakers	266
13.8	Geoengineering and its relationship to ocean acidification	266
13.9	Conclusions	267
13.10	Acknowledgements	268
14	Impact of climate change mitigation on ocean acidification projections	272
	<i>Fortunat Joos, Thomas L. Frölicher, Marco Steinacher, and Gian-Kasper Plattner</i>	
14.1	Introduction	272
14.2	Scenarios and metrics	273
14.3	Baseline and mitigation emissions scenarios for the 21st century: how much acidification can be avoided?	276
14.4	Inertia in the earth system: long-term commitment to ocean acidification by 21st century emissions	278
14.5	Regional changes in surface ocean acidification: undersaturation in the Arctic is imminent	280
14.6	Delayed responses in the deep ocean	283
14.7	Pathways leading to stabilization of atmospheric CO ₂	285
14.8	Conclusions	287
14.9	Acknowledgements	288
15	Ocean acidification: knowns, unknowns, and perspectives	291
	<i>Jean-Pierre Gattuso, Jelle Bijma, Marion Gehlen, Ulf Riebesell, and Carol Turley</i>	
15.1	Introduction	291
15.2	Knowns and unknowns	291
15.3	Ecosystems at risk	302
15.4	Past limitations and future prospects	304
15.5	Conclusions	309
15.6	Acknowledgements	309
