Contents

Preface to the Second Edition 19

Preface to the First Edition 21

1 Introduction 27

- 1.1 The Role of Transport Processes in Biological Systems 27
- 1.2 Definition of Transport Processes 28
 - 1.2.1 Diffusion 28
 - 1.2.2 Convection 31
 - 1.2.3 Transport by Binding Interactions 34
- 1.3 Relative Importance of Convection and Diffusion 35
- 1.4 Transport Within Cells 37
 - 1.4.1 Transport Across the Cell Membrane 37
 - 1.4.2 Transport Within the Cell 42
- 1.5 Transcellular Transport 44
 - 1.5.1 Junctions Between Cells 44
 - 1.5.2 Epithelial Cells 45
 - 1.5.3 Endothelial Cells 47
- 1.6 Physiological Transport Systems 48
 - 1.6.1 Cardiovascular System 49
 - 1.6.2 Respiratory System 55
 - 1.6.3 Gastrointestinal Tract 60
 - 1.6.4 Liver 62
 - 1.6.5 Kidneys 64
 - 1.6.6 Integrated Organ Function 66
- 1.7 Application of Transport Processes in Disease Pathology, Treatment, and Device Development 66
 - 1.7.1 Transport Processes and Atherosclerosis 67
 - 1.7.2 Transport Processes and Cancer Treatment 69
 - 1.7.3 Transport Processes, Artificial Organs, and Tissue Engineering 71
- 1.8 Relative Importance of Transport and Reaction Processes 72
- 1.9 Questions 73
- 1.10 Problems 74
- 1.11 References 77

Part I Introduction to Physiological Fluid Mechanics 79

2 Conservation Relations and Momentum Balances 81

- 2.1 Introduction 81
- 2.2 Fluid Kinematics 81
 - 2.2.1 Control Volumes 82
 - 2.2.2 Velocity Field 82
 - 2.2.3 Flow Rate 84
 - 2.2.4 Acceleration 85
 - 2.2.5 Fluid Streamlines 86
- 2.3 Conservation Relations and Boundary Conditions 88
 - 2.3.1 Conservation of Mass 89
 - 2.3.2 Momentum Balances 89
 - 2.3.3 Forces 90
 - 2.3.4 Boundary Conditions 92
- 2.4 Fluid Statics 93
 - 2.4.1 Static Equilibrium 93
 - 2.4.2 Surface Tension 96
 - 2.4.3 Membrane and Cortical Tension 98
- 2.5 Constitutive Relations 100
 - 2.5.1 Newton's Law of Viscosity 100
 - 2.5.2 Non-Newtonian Rheology 102
 - 2.5.3 Time-Dependent Viscoelastic Behavior 105
- 2.6 Laminar and Turbulent Flow 108
- 2.7 Application of Momentum Balances 111
 - 2.7.1 Flow Induced by a Sliding Plate 112
 - 2.7.2 Pressure-Driven Flow Through a Narrow Rectangular Channel 114
 - 2.7.3 Pressure-Driven Flow Through a Cylindrical Tube 118
 - 2.7.4 Pressure-Driven Flow of a Power Law Fluid in a Cylindrical Tube 121
 - 2.7.5 Flow Between Rotating Cylinders 123
- 2.8 Rheology and Flow of Blood 127
 - 2.8.1 Measurement of Blood Viscosity 127
 - 2.8.2 Rheology of Blood Flow in Large Vessels 128
 - 2.8.3 Blood Flow in Small Tubes 131

- 2.8.4 Blood Flow in Capillaries 134
- 2.8.5 Regulation of Blood Flow 135
- 2.9 Questions 137
- 2.10 Problems 137
- 2.11 References 144

3 Conservation Relations for Fluid Transport, Dimensional Analysis, and Scaling 146

- 3.1 Introduction 146
- 3.2 Differential Form of the Equation of Conservation of Mass
in Three Dimensions 147
 - 3.2.1 General Form of the Equation of Conservation of Mass 147
 - 3.2.2 Conservation of Mass for Incompressible Fluids 149
- 3.3 Differential Form of the Conservation of Linear Momentum
and the Navier–Stokes Equations in Three Dimensions 151
 - 3.3.1 General Form of the Equation of Conservation of Linear
Momentum 151
 - 3.3.2 The Navier–Stokes Equation for an Incompressible
Newtonian Fluid 157
- 3.4 Fluid Motion with More Than One Dependent Variable 162
 - 3.4.1 Two-Dimensional Flow in a Channel 162
 - 3.4.2 Time Required to Establish a Steady Flow in a Rectangular
Channel 167
- 3.5 Dimensional Analysis and Dimensionless Groups 171
 - 3.5.1 Dimensional Analysis 171
 - 3.5.2 Dimensionless Form of the Navier–Stokes Equation 174
 - 3.5.3 Dimensional Analysis and Dynamic Similarity 176
- 3.6 Low-Reynolds-Number Flow 179
 - 3.6.1 Conservation Relations for Low-Reynolds-Number Flow 179
 - 3.6.2 Low-Reynolds-Number Flow Around a Sphere 181
- 3.7 Questions 188
- 3.8 Problems 188
- 3.9 References 194

4 Approximate Methods for the Analysis of Complex Physiological Flow 196

- 4.1 Introduction 196
- 4.2 Integral Form of the Equation of Conservation of Mass 197
- 4.3 Integral Form of the Equation of Conservation of Linear
Momentum 200

- 4.4 Bernoulli's Equation 203
 - 4.4.1 Bernoulli's Equation Applied to Stenotic Heart Valves 208
 - 4.4.2 The Engineering Bernoulli Equation: The Effects of Viscous Losses and Time-Dependent Energy Changes 210
- 4.5 Boundary Layer Theory 213
 - 4.5.1 Background to Boundary Layer Theory 213
 - 4.5.2 Derivation of the Boundary Layer Equations 214
 - 4.5.3 Integral Momentum Equations for Boundary Layer Flows 218
- 4.6 Flow Separation 221
- 4.7 Lubrication Theory 224
- 4.8 Peristaltic Pumping 232
- 4.9 Questions 236
- 4.10 Problems 236
- 4.11 References 240

5 Fluid Flow in the Circulation and Tissues 241

- 5.1 Introduction 241
- 5.2 Oscillating Flow in a Cylindrical Tube 242
- 5.3 Entrance Lengths 253
- 5.4 Flow in Curved Vessels 254
- 5.5 Flow in Branching Vessels 258
- 5.6 Flow in Specific Arteries 260
 - 5.6.1 Carotid Artery 261
 - 5.6.2 Aorta 262
 - 5.6.3 Effect of Vessel Wall Elasticity 263
 - 5.6.4 Coronary Arteries 264
- 5.7 Arterial Fluid Dynamics and Atherosclerosis 266
 - 5.7.1 Hemodynamic Variables Associated with Atherosclerosis 267
 - 5.7.2 Effect of Hemodynamics upon Endothelial Cell Function 269
- 5.8 Heart-Valve Hemodynamics 271
 - 5.8.1 Artificial Heart Valves 271
 - 5.8.2 Turbulent Flow Around Heart Valves 273
- 5.9 Fluid Dynamic Effects of Reconstructive Surgery for Congenital Heart Defects 276
- 5.10 Questions 278
- 5.11 Problems 278
- 5.12 References 281

Part II Fundamentals and Applications of Mass Transport in Biological Systems 285

6 Mass Transport in Biological Systems 287

- 6.1 Introduction 287
- 6.2 Solute Fluxes in Mixtures 287
 - 6.2.1 The Dilute-Solution Assumption 290
- 6.3 Conservation Relations 291
 - 6.3.1 Equation of Conservation of Mass for a Mixture 291
 - 6.3.2 Boundary Conditions 292
- 6.4 Constitutive Relations 293
 - 6.4.1 Fick's Law of Diffusion for Dilute Solutions 294
 - 6.4.2 Diffusion in Concentrated Solutions 295
- 6.5 Diffusion as a Random Walk 296
- 6.6 Estimation of Diffusion Coefficients in Solution 301
 - 6.6.1 Transport Properties of Proteins 302
 - 6.6.2 The Stokes–Einstein Equation 303
 - 6.6.3 Estimation of Frictional Drag Coefficients 306
 - 6.6.4 The Effects of Actual Surface Shape and Hydration 309
 - 6.6.5 Correlations 313
- 6.7 Steady-State Diffusion in One Dimension 314
 - 6.7.1 Diffusion in Rectangular Coordinates 314
 - 6.7.2 Radial Diffusion in Cylindrical Coordinates 322
 - 6.7.3 Radial Diffusion in Spherical Coordinates 325
- 6.8 Unsteady Diffusion in One Dimension 326
 - 6.8.1 One-Dimensional Diffusion in a Semi-Infinite Medium 327
 - 6.8.2 One-Dimensional Unsteady Diffusion in a Finite Medium 336
 - 6.8.3 Model of Diffusion of a Solute into a Sphere from a Well-Stirred Bath 344
 - 6.8.4 Quasi-Steady Transport Across Membranes 349
- 6.9 Diffusion-Limited Reactions 353
 - 6.9.1 Diffusion-Limited Binding and Dissociation in Solution 353
 - 6.9.2 Diffusion-Limited Binding Between a Cell Surface Protein and a Solute 355
 - 6.9.3 Diffusion-Limited Binding on a Cell Surface 358
- 6.10 A Thermodynamic Derivation of the Stokes–Einstein Equation 360
- 6.11 Questions 362
- 6.12 Problems 363
- 6.13 References 370

7 Diffusion with Convection or Electrical Potentials 372

- 7.1 Introduction 372
- 7.2 Fick's Law of Diffusion and Solute Flux 373
- 7.3 Conservation of Mass for Dilute Solutions 373
 - 7.3.1 Transport in Multicomponent Mixtures 378
- 7.4 Dimensional Analysis 381
- 7.5 Electrolyte Transport 383
 - 7.5.1 Nernst–Planck Equation 384
 - 7.5.2 Electrolyte Transport Across Membranes 389
- 7.6 Diffusion and Convection 396
 - 7.6.1 Release from the Walls of a Channel: A Short-Contact-Time Solution 396
 - 7.6.2 Momentum and Concentration Boundary Layers 402
- 7.7 Macroscopic Form of Conservation Relations for Dilute Solutions 404
- 7.8 Mass Transfer Coefficients 406
- 7.9 Mass Transfer Across Membranes: Application to Hemodialysis 409
 - 7.9.1 Cocurrent Exchange 412
 - 7.9.2 Countercurrent Exchange 413
- 7.10 Questions 420
- 7.11 Problems 420
- 7.12 References 424

8 Transport in Porous Media 425

- 8.1 Introduction 425
- 8.2 Porosity, Tortuosity, and Available Volume Fraction 427
- 8.3 Fluid Flow in Porous Media 436
 - 8.3.1 Darcy's Law 436
 - 8.3.2 Brinkman Equation 443
 - 8.3.3 Squeeze Flow 446
- 8.4 Solute Transport in Porous Media 449
 - 8.4.1 General Considerations 449
 - 8.4.2 Effective Diffusion Coefficient in Hydrogels 451
 - 8.4.3 Effective Diffusion Coefficient in a Liquid-Filled Pore 452
 - 8.4.4 Effective Diffusion Coefficient in Biological Tissues 456
- 8.5 Fluid Transport in Poroelastic Materials 457
- 8.6 Problems 461
- 8.7 References 463

9 Transvascular Transport 465

- 9.1 Introduction 465
- 9.2 Pathways for Transendothelial Transport 466
 - 9.2.1 Continuous Capillaries 467
 - 9.2.2 Fenestrated Capillaries 468
 - 9.2.3 Discontinuous Capillaries 468
- 9.3 Rates of Transvascular Transport 469
 - 9.3.1 Osmotic Pressure 469
 - 9.3.2 Rate of Fluid Flow and Starling's Law of Filtration 473
 - 9.3.3 Rate of Solute Transport and the Kedem–Katchalsky Equation 474
- 9.4 Phenomenological Constants in the Analysis of Transvascular Transport 476
- 9.5 A Limitation of Starling's Law 479
 - 9.5.1 Fluid Filtration in the Steady State 479
 - 9.5.2 A New View of Starling's Law 481
- 9.6 Problems 482
- 9.7 References 485

Part III The Effect of Mass Transport Upon Biochemical Interactions 487

10 Mass Transport and Biochemical Interactions 489

- 10.1 Introduction 489
- 10.2 Chemical Kinetics and Reaction Mechanisms 489
 - 10.2.1 Reaction Rates 489
 - 10.2.2 Reaction Mechanisms 492
 - 10.2.3 First-Order Reactions 493
 - 10.2.4 Second-Order Irreversible Reactions 494
 - 10.2.5 Reversible Reactions 500
- 10.3 Sequential Reactions and the Quasi–Steady-State Assumption 501
- 10.4 Enzyme Kinetics 505
 - 10.4.1 Derivation of Michaelis–Menten Kinetics 507
 - 10.4.2 Application of the Quasi–Steady-State Assumption to Enzyme Kinetics 511
 - 10.4.3 Determination of K_m and R_{\max} 512

- 10.5 Regulation of Enzyme Activity 513
 - 10.5.1 Competitive Inhibition 513
 - 10.5.2 Uncompetitive and Noncompetitive Inhibition 514
 - 10.5.3 Substrate Inhibition 517
- 10.6 Effect of Diffusion and Convection on Chemical Reactions 517
 - 10.6.1 Reaction and Diffusion in Solution 519
 - 10.6.2 Interphase Mass Transfer and Reaction 521
 - 10.6.3 Intrapphase Chemical Reactions 523
 - 10.6.4 Interphase and Intrapphase Diffusion and Reaction 528
 - 10.6.5 Observable Quantities and the Effectiveness Factor 530
 - 10.6.6 Transport Effects on Enzymatic Reactions 533
- 10.7 Questions 540
- 10.8 Problems 542
- 10.9 References 546

11 Cell-Surface Ligand–Receptor Kinetics and Molecular Transport Within Cells 548

- 11.1 Introduction 548
- 11.2 Receptor–Ligand Binding Kinetics 549
- 11.3 Determination of Rate Constants for Receptor–Ligand Binding 553
- 11.4 Deviations from Simple Bimolecular Kinetics 556
 - 11.4.1 Ligand Depletion 557
 - 11.4.2 Two or More Receptor Populations 559
 - 11.4.3 Interconverting Receptor Subpopulations 562
- 11.5 Receptor-Mediated Endocytosis 564
 - 11.5.1 A Kinetic Model for LDL Receptor-Mediated Endocytosis 568
 - 11.5.2 Receptor Interaction with Coated Pits 572
- 11.6 Receptor Regulation During Receptor-Mediated Endocytosis 575
- 11.7 Signal Transduction 580
 - 11.7.1 Qualitative Aspects of Signal Transduction 580
 - 11.7.2 Quantitative Aspects of Signal Transduction 586
- 11.8 Regulation of Gene Expression 595
 - 11.8.1 Simplified Model for Gene Induction and Expression 598
- 11.9 Questions 602
- 11.10 Problems 602
- 11.11 References 606

12 Cell Adhesion 608

- 12.1 Introduction 608
- 12.2 Effect of Force on Bond Association and Dissociation 609
 - 12.2.1 The Influence of Energy Barriers on Molecular Interactions 609
 - 12.2.2 Bond Disruption in the Presence of an Applied Force 611
 - 12.2.3 Bond Formation in the Presence of an Applied Force 612
 - 12.2.4 The Effect of Loading Rates on Bond Forces 612
- 12.3 Cell–Matrix Adhesion 614
 - 12.3.1 Cell Attachment 616
 - 12.3.2 Cell Detachment 619
- 12.4 Biophysics of Leukocyte Rolling and Adhesion 628
 - 12.4.1 Overview 628
 - 12.4.2 Modeling Leukocyte–Endothelial Cell Interactions 629
 - 12.4.3 Effect of Cell Deformation on Leukocyte Adhesion to Endothelium 635
- 12.5 Stochastic Effects on Chemical Interactions 636
 - 12.5.1 Kinetic Analysis of Stochastic Chemical Reactions 637
 - 12.5.2 Monte Carlo Analysis of Stochastic Chemical Reactions 641
- 12.6 Questions 644
- 12.7 Problems 644
- 12.8 References 645

Part IV Transport in Organs 649

13 Transport of Gases Between Blood and Tissues 651

- 13.1 Introduction 651
- 13.2 Oxygen–Hemoglobin Equilibria 652
- 13.3 Oxygen–Hemoglobin Binding Kinetics 657
- 13.4 Dynamics of Oxygenation of Blood in Lung Capillaries 658
- 13.5 Oxygen Delivery to Tissues 663
 - 13.5.1 The Krogh Cylinder Model of Oxygen Transport in Tissues 664
 - 13.5.2 Analysis of Assumptions Used in the Krogh Model 668
- 13.6 Nitric Oxide Production and Transport in Tissues 672
 - 13.6.1 NO Formation and Reaction 673
 - 13.6.2 NO Formation, Diffusion, and Reaction in Tissues 674

- 13.7 Questions 679
- 13.8 Problems 679
- 13.9 References 681

14 Transport in the Kidneys 683

- 14.1 Introduction 683
- 14.2 Mechanisms of Transmembrane Transport 684
 - 14.2.1 Direct Diffusion 684
 - 14.2.2 Facilitated Transport 688
 - 14.2.3 Active Transport 692
- 14.3 Renal Physiology 693
 - 14.3.1 Renal Blood Flow 693
 - 14.3.2 Urine Formation 695
- 14.4 Quantitative Analysis of Glomerular Filtration 702
 - 14.4.1 Hydraulic Conductivity of Glomerular Capillaries 702
 - 14.4.2 Solute Transport Across Glomerular Capillaries 704
- 14.5 Quantitative Analysis of Tubular Reabsorption 710
 - 14.5.1 Mass Balance Equations 710
 - 14.5.2 Fluxes of Passive Diffusion and Convection 713
 - 14.5.3 Goldman–Hodgkin–Katz Equation for Ion Channels 714
 - 14.5.4 Mathematical Modeling of Carrier-Mediated Transport 715
 - 14.5.5 A Mathematical Model of Na^+/K^+ ATPase 726
- 14.6 A Whole-Organ Approach to Renal Modeling 727
 - 14.6.1 Filtration 728
 - 14.6.2 Reabsorption 728
 - 14.6.3 Secretion 729
- 14.7 Problems 730
- 14.8 References 732

15 Drug Transport in Solid Tumors 733

- 15.1 Introduction 733
 - 15.1.1 Drug Delivery in Cancer Treatment 733
 - 15.1.2 Routes of Drug Administration 735
 - 15.1.3 Drug Transport Within Solid Tumors 736
- 15.2 Quantitative Analysis of Transvascular Transport 741
- 15.3 Quantitative Analysis of Interstitial Fluid Transport 741
 - 15.3.1 Governing Equations 741
 - 15.3.2 Unidirectional Flow of Fluid at Steady State 742
 - 15.3.3 Unsteady State Fluid Transport 744

- 15.4 Interstitial Hypertension in Solid Tumors 748
 - 15.4.1 Effects of Interstitial Hypertension on Drug and Gene Delivery 749
 - 15.4.2 Etiology of Interstitial Hypertension 750
 - 15.4.3 Strategies for Reducing Interstitial Fluid Pressure 751
- 15.5 Quantitative Analysis of Interstitial Transport of Solutes 753
 - 15.5.1 Governing Equations 753
 - 15.5.2 Unidirectional Transport in a Solid Tumor 754
 - 15.5.3 Unidirectional Transport in the Krogh Cylinder 755
- 15.6 Problems 759
- 15.7 References 760

16 Transport in Organs and Organisms 762

- 16.1 Introduction 762
- 16.2 General Considerations in Pharmacokinetic Analysis 763
- 16.3 Simple Compartment Models in Pharmacokinetic Analysis 764
 - 16.3.1 One-Compartment Model 765
 - 16.3.2 Two-Compartment Model 766
- 16.4 Physiologically Based Pharmacokinetic Models 770
 - 16.4.1 Transport in Individual Organs 770
 - 16.4.2 Physiologically Based Pharmacokinetic Analysis of Methotrexate 772
- 16.5 Allometric Scaling Law and Its Application to Transport Properties 776
 - 16.5.1 Scaling Laws 776
 - 16.5.2 Applications of the Allometric Scaling Law in Pharmacokinetic Analysis 780
- 16.6 Problems 784
- 16.7 References 787

Part V Energy and Bioheat Transfer 789

17 Energy Transport in Biological Systems 791

- 17.1 Introduction 791
- 17.2 First Law of Thermodynamics and Metabolism 792
 - 17.2.1 Conservation Relations 792
 - 17.2.2 Differential Forms of the Conservation of Energy 796
 - 17.2.3 Constitutive Relation and Boundary Conditions 798
 - 17.2.4 Dimensionless Form of the Conservation Relations 803

- 17.3 Steady and Unsteady Heat Conduction 804
 - 17.3.1 Insulation and Heat Conduction Through Layers of Different Thermal Conductivity 804
 - 17.3.2 Steady State Conduction and Metabolic Energy Production 807
 - 17.3.3 Unsteady Heat Conduction 809
 - 17.3.4 Unsteady Heat Conduction with a Phase Change 810
- 17.4 Convective Heat Transfer 814
 - 17.4.1 Correlations for Forced Convection 814
 - 17.4.2 Natural Convection 815
- 17.5 Energy Transfer Due to Evaporation 819
- 17.6 Metabolism and Regulation of Body Temperature 826
 - 17.6.1 Basal Metabolic Rate and Efficiency 826
 - 17.6.2 Regulation of Body Temperature 829
 - 17.6.3 Macroscopic Balance for Energy Transfer in Biological Systems 830
- 17.7 The Bioheat-Transfer Equation 834
- 17.8 Cryopreservation 835
- 17.9 Questions 837
- 17.10 Problems 837
- 17.11 References 838

Appendix Mathematical Background 840

- A.1 Review of Calculus and Solution of Ordinary Differential Equations 840
- A.2 Solution of Partial Differential Equations by the Method of Separation of Variables 848
- A.3 Basics of Vectors and Tensors 854
- A.4 Physical Constants and Units 861
- A.5 References 862

Index 863
