# TABLE OF CONTENTS

<b>Foreword</b>		xii
<i>Professor Rafael Fernández Rubio, Madrid School of Mines</i>		
<b>Preface</b>		xv
<b>Chapter One Mining and the Water Environment</b>		1
1.1 <i>Mining, society and the environment</i>		1
1.2 <i>Scope of this book</i>		3
1.2.1 What's covered?		3
1.2.2 Who should read this book?		5
1.2.3 Beyond this book		5
1.3 <i>Overview of mining and mine wastes</i>		6
1.3.1 Purpose of overview		6
1.3.2 Deep mining		7
1.3.4 Surface mines		29
1.3.5 Hybrid mining methods		39
1.3.6 Mine wastes		42
1.4 <i>Impacts of mining and mine waters on the water environment and infrastructure</i>		54
1.5 <i>Summary</i>		62
<b>Chapter Two Mine Water Chemistry</b>		65
2.1 <i>Sources of mine water contaminants and their natural attenuation</i>		65
2.1.1 Mineral weathering as a source of mine water contamination		67
2.1.2 The weathering kinetics of pyrite and related sulfide minerals		70
2.1.3 Biological and chemical methods for pollution prevention		73
2.1.4 Mineral weathering as a source of natural attenuation		75
2.1.5 Contaminant mobility: pH as a master variable		76
2.2 <i>Acidity, alkalinity and pH</i>		76
2.2.1 Strong acids and bases: defining acidity and alkalinity		79
2.2.2 Weak acids: the CO <sub>2</sub> -H <sub>2</sub> O buffer system		80
2.2.3 Buffering mine water quality: the relation between acidity and pH		85

	2.2.4	The proton condition: considering other weak acids in mine waters	90
	2.2.5	Vestigial and juvenile acidity	95
	2.2.6	The impact of biota on acidity and alkalinity	97
2.3		<i>Assessing contamination loads</i>	98
	2.3.1	Methods for assessing the potential for contamination	99
	2.3.2	Mineral weathering rates: a scaling problem	102
	2.3.3	Relating mineral mass and weathering rates to evolution of discharge quality	104
	2.3.4	Assessing the longevity of contamination	106
2.4		<i>The geochemistry of metal ions in aquatic environments</i>	112
	2.4.1	Hydrolysis and solubility of metal ions	113
	2.4.2	Adsorption of metal ions	117
<b>Chapter Three Mine Water Hydrology</b>			127
	3.1	<i>Hydrology and mining</i>	127
	3.2	<i>Issues and processes in mine water hydrology</i>	128
	3.3	<i>Mass continuity and hydrological fluxes</i>	129
	3.3.1	Mass continuity as the core paradigm in hydrology	129
	3.3.2	Natural hydrological balances – the basic processes	130
	3.3.3	Complete descriptions of flow processes: the basis for hydrological modelling	136
	3.4	<i>Hydrometry in mining environments</i>	147
	3.4.1	Definition of hydrometry	147
	3.4.2	Hydrometeorological parameters	147
	3.4.3	Flow gauging	151
	3.4.4	Measuring ground water heads	159
	3.4.5	Measuring ventilation water losses	165
	3.5	<i>Physical impacts of mineral extraction on natural hydrological systems</i>	169
	3.5.1	Excavation and fracturing	169
	3.5.2	Impacts of excavation on surface water systems	170
	3.5.3	Impacts of excavation on ground water systems	176
	3.6	<i>Water inflows to active workings</i>	181
	3.6.1	Seepages, drippers, feeders, intrushes and direct precipitation	181
	3.6.2	Water make and mine water budgets	187
	3.6.3	Deep mine water makes: some general observations	189
	3.6.4	Mining beneath water bodies	193
	3.6.5	Surface mine water makes: a question of stability	194
	3.7	<i>Dewatering techniques and their design</i>	198
	3.7.1	The necessity of dewatering	198
	3.7.2	Sump dewatering	199
	3.7.3	Adit dewatering	204

3.7.4	External dewatering	206
3.7.5	Geotechnical alternatives/aids to dewatering	211
3.8	<i>Environmental impacts of dewatering and their mitigation</i>	213
3.8.1	Dewatering impacts	213
3.8.2	Mitigation	216
3.9	<i>Hydrological behaviour of waste rock piles, backfill and tailings dams</i>	218
3.9.1	Waste rock piles (spoil heaps) and surface mine backfill	218
3.9.2	Tailings dams	226
3.10	<i>Mine abandonment and rebound processes</i>	230
3.10.1	Understanding mine water rebound: ponds and head-dependent inflows	230
3.10.2	Predictive modelling of mine water rebound	239
3.11	<i>Abandoned mine hydrology after rebound is complete</i>	248
3.11.1	Abandoned surface mines: pit lakes	248
3.11.2	Deep mine voids	253
3.11.3	The environmental impacts of abandoned mine discharges	254
3.11.4	The longevity of pollution from abandoned mines	257
3.12	<i>Hydrological interventions in mine water remediation</i>	260
3.12.1	Introduction	260
3.12.2	Passive prevention of pollutant release	260
3.12.3	Use of pumps in mine water control	268
<b>Chapter Four</b>	<b>Active Treatment of Polluted Mine Waters</b>	<b>271</b>
4.1	<i>What is active treatment?</i>	271
4.2	<i>Oxidation, dosing with alkali and sedimentation (ODAS)</i>	274
4.2.1	Introduction	274
4.2.2	Oxidation	274
4.2.2.1	Purpose of oxidation in mine water treatment	274
4.2.2.2	Cascade aeration	275
4.2.2.3	Trickle filter aeration	275
4.2.2.4	In-line venturi aeration	275
4.2.2.5	Mechanical aeration	277
4.2.2.6	Biochemical oxidation by RBC	278
4.2.2.7	Chemical oxidation	278
4.2.3	Dosing with alkali	279
4.2.3.1	Rationale for dosing with alkali	279
4.2.3.2	Pre-aeration to strip excess CO <sub>2</sub> before alkali addition	279
4.2.3.3	Alkaline reagents for mine water dosing	280
4.2.3.4	Quantities of alkali needed for dosing	283

4.2.4	Sedimentation	286
4.2.4.1	Sedimentation to remove inert solids from suspension	286
4.2.4.2	Sedimentation for removal of iron and other metals	287
4.2.4.3	Further considerations in sedimentation basin design	290
4.2.5	Limitations of the conventional ODAS approach	291
4.2.6	Advanced ODAS methodologies	292
4.3	<i>Sulfidization and biodesalination</i>	295
4.3.1	Principles of active sulfate reduction technology	295
4.3.2	Varieties of sulfidization technology	295
4.3.3	Biodesalination	296
4.4	<i>Sorption and ion exchange</i>	299
4.5	<i>Membrane processes</i>	300
4.6	<i>Other active treatment processes</i>	300
4.7	<i>Sludge Management – A Key Issue in Mine Water Treatment</i>	302
4.7.1	Sludge – a resource or a waste product?	302
4.7.2	Waste sludges arising from mine water treatment	303
4.7.2.1	General considerations	303
4.7.2.2	Increasing sludge density	304
<b>Chapter Five</b>	<b>Passive Treatment of Polluted Mine Waters</b>	311
5.1	<i>What is passive treatment?</i>	311
5.2	<i>A brief history of passive mine water treatment</i>	314
5.3	<i>Chemical and microbial basis for passive treatment</i>	315
5.3.1	Scope of this section	315
5.3.2	Removal of Fe in passive systems	316
5.3.3	Removal of Al <sup>3+</sup> in passive systems	320
5.3.4	Removal of manganese in passive systems	321
5.3.5	Generation of alkalinity in passive treatment systems	322
5.3.6	Interaction of metal removal and acid neutralization processes	324
5.3.7	Removal processes for other contaminants	326
5.3.8	Rates of contaminant removal in passive systems: towards design criteria	327
5.4	<i>Passive treatment technologies</i>	333
5.4.1	A typology of passive mine water treatment systems	333
5.4.2	Inorganic media passive systems (IMPs)	334
5.4.2.1	The concept of IMPs	334
5.4.2.2	Anoxic Limestone Drains (ALDs)	335
5.4.2.3	Oxic limestone drains (OLDs) and open-channel limestone reactors (OCLRs)	340
5.4.2.4	Carbonate-based reactors for removal of Mn, Zn, Cd and As	343
5.4.2.5	SCOOFI reactors	344

5.4.3	Wetland-type passive systems	349
5.4.3.1	General considerations	349
5.4.3.2	Sedimentation ponds	350
5.4.3.3	Aerobic Wetlands (Reed beds)	350
5.4.3.4	Compost wetlands	365
5.4.3.5	Reducing and alkalinity producing systems (RAPS)	370
5.4.4	Subsurface-flow bacterial sulfate reduction systems (SFBs)	375
5.4.4.1	<i>In situ</i> permeable reactive barriers (PRBs)	375
5.4.4.2	Anaerobic reactors for surface mine water discharges	381
5.5	<i>Passive treatment process selection and staging</i>	383
5.5.1	Principles	383
5.5.2	Illustrative case studies	385
5.5.2.1	Aerobic wetland treatment of a net-alkaline water contaminated with Fe	385
5.5.2.2	Compost wetland treatment of an acidic, Al-rich waste rock pile leachate	387
5.5.2.3	Use of RAPS and wetlands to treat an acidic discharge rich in Fe and Al	393
<b>Appendix I</b>	<b>Glossary of mining and related terms relevant to mine water science and engineering</b>	<b>397</b>
