

An Introduction to Behavioural Ecology

Nicholas B. Davies, John R. Krebs and Stuart A. West

FOURTH EDITION

 **WILEY-BLACKWELL**
A John Wiley & Sons, Ltd., Publication

Contents

Preface	x
Acknowledgements	xiii
1 Natural Selection, Ecology and Behaviour	1
Watching and wondering	1
Natural selection	5
Genes and behaviour	6
Selfish individuals or group advantage?	11
Phenotypic plasticity: climate change and breeding times	18
Behaviour, ecology and evolution	21
Summary	22
Further reading	22
Topics for discussion	23
2 Testing Hypotheses in Behavioural Ecology	24
The comparative approach	25
Breeding behaviour of gulls in relation to predation risk	26
Social organization of weaver birds	28
Social organization in African ungulates	30
Limitations of early comparative studies	31
Comparative approach to primate ecology and behaviour	33
Using phylogenies in comparative analysis	37
The comparative approach reviewed	45
Experimental studies of adaptation	46
Summary	49
Further reading	50
Topics for discussion	51
3 Economic Decisions and the Individual	52
The economics of carrying a load	52
The economics of prey choice	59
Sampling and information	62

The risk of starvation	63
Environmental variability, body reserves and food storing	65
Food storing birds: from behavioural ecology to neuroscience	66
The evolution of cognition	71
Feeding and danger: a trade-off	73
Social learning	75
Optimality models and behaviour: an overview	79
Summary	81
Further reading	82
Topics for discussion	82
4 Predators versus Prey: Evolutionary Arms Races	83
Red Queen evolution	83
Predators versus cryptic prey	86
Enhancing camouflage	92
Warning colouration: aposematism	95
Mimicry	100
Trade-offs in prey defences	103
Cuckoos versus hosts	105
Summary	113
Further reading	114
Topics for discussion	114
5 Competing for Resources	116
The Hawk–Dove game	116
Competition by exploitation: the ideal free distribution	119
Competition by resource defence: the despotic distribution	123
The ideal free distribution with unequal competitors	123
The economics of resource defence	126
Producers and scroungers	130
Alternative mating strategies and tactics	131
ESS thinking	142
Animal personalities	143
Summary	144
Further reading	145
Topics for discussion	146
6 Living in Groups	147
How grouping can reduce predation	148
How grouping can improve foraging	159
Evolution of group living: shoaling in guppies	163
Group size and skew	164
Group decision making	169
Summary	177
Further reading	177
Topics for discussion	178

7 Sexual Selection, Sperm Competition and Sexual Conflict	179
Males and females	180
Parental investment and sexual competition	182
Why do females invest more in offspring care than do males?	184
Evidence for sexual selection	186
Why are females choosy?	189
Genetic benefits from female choice: two hypotheses	194
Testing the hypotheses for genetic benefits	196
Sexual selection in females and male choice	201
Sex differences in competition	204
Sperm competition	205
Constraints on mate choice and extra-pair matings	208
Sexual conflict	209
Sexual conflict: who wins?	216
Chase-away sexual selection	218
Summary	220
Further reading	221
Topics for discussion	221
8 Parental Care and Family Conflicts	223
Evolution of parental care	223
Parental investment: a parent's optimum	227
Varying care in relation to costs and benefits	229
Sexual conflict	232
Sibling rivalry and parent–offspring conflict: theory	238
Sibling rivalry: evidence	240
Parent–offspring conflict: evidence	243
Brood parasites	249
Summary	252
Further reading	252
Topics for discussion	253
9 Mating Systems	254
Mating systems with no male parental care	254
Mating systems with male parental care	264
A hierarchical approach to mating system diversity	279
Summary	280
Further reading	281
Topics for discussion	281
10 Sex Allocation	282
Fisher's theory of equal investment	285
Sex allocation when relatives interact	286
Sex allocation in variable environments	296
Selfish sex ratio distorters	304
Summary	305

Further reading	305
Topics for discussion	306
11 Social Behaviours: Altruism to Spite	307
Kin selection and inclusive fitness	308
Hamilton's rule	313
How do individuals recognize kin?	318
Kin selection doesn't need kin discrimination	322
Selfish restraint and kin selection	325
Spite	327
Summary	331
Further reading	332
Topics for discussion	333
12 Cooperation	334
What is cooperation?	334
Free riding and the problem of cooperation	336
Solving the problem of cooperation	337
Kin selection	339
Hidden benefits	341
By-product benefit	341
Reciprocity	345
Enforcement	350
A case study – the Seychelles Warbler	354
Manipulation	356
Summary	358
Further reading	358
Topics for discussion	359
13 Altruism and Conflict in the Social Insects	360
The social insects	360
The life cycle and natural history of a social insect	364
The economics of eusociality	366
The pathway to eusociality	366
The haplodiploidy hypothesis	367
The monogamy hypothesis	371
The ecological benefits of cooperation	375
Conflict within insect societies	379
Conflict over the sex ratio in the social hymenoptera	379
Worker policing in the social hymenoptera	386
Superorganisms	389
Comparison of vertebrates with insects	390
Summary	392
Further reading	392
Topics for discussion	393

14	Communication and Signals	394
	The types of communication	395
	The problem of signal reliability	396
	Indices	397
	Handicaps	405
	Common interest	411
	Human language	416
	Dishonest signals	417
	Summary	421
	Further reading	422
	Topics for discussion	423
15	Conclusion	424
	How plausible are our main premises?	424
	Causal and functional explanations	436
	A final comment	438
	Summary	441
	Further reading	441
	References	442
	Index	489
