

RICHARD MACKAY is a Principal Environmental Planner at Mott MacDonald, specializing in ecology. He has a wide experience of wildlife surveys and environmental impact assessment, as well as formulating environmental policies for major companies. He is co-author of the World Health Organization's award-winning *Inheriting the World: The Atlas of Children's Health and the Environment*.

Up to 20 percent of species may be extinct by 2030. Vividly presented through full color maps and graphics, this striking atlas profiles species lost, threatened and surviving today. It examines different ecosystems, the major threats to their inhabitants and steps being taken towards conservation. Fully updated, topics include:

- the environmental impact of human development and warning signs of climate change
- the seabed and damage caused by deep-sea trawling and mining
- the increasing area of wetlands covered by the Ramsar Convention
- plus the latest information on birds, reptiles, amphibians, invertebrates and fish, and endangered mammals such as the panda, the Arabian oryx and the bonobo.
