Contents

Preface XIII

Acknowledgement XIX

1	Macrocyclic Stereocontrol	1
1.1	Introduction	1
1.2	Background	1
1.3	Conformational Control in Medium-Sized Rings	4
1.4	Asymmetric Synthesis with Medium-Sized Rings	6
1.5	Case Studies in Natural Products Total Synthesis	8
1.6	Macrocyclic Stereocontrol in Cyclic Peptides	14
1.7	Appendix: Macrocycle Formation	14
1.8	Conclusion	15
	References	16
2	Carbonyl Addition Reactions	19
2.1	Introduction	19
2.2	Non-Chelated 1,2-Asymmetric Induction and the Operation of Steric and Electronic Effects	21
2.3	1,2-Asymmetric Induction Predicated on Chelation Control	25
2.4	1,3-Asymmetric Induction from C β Stereogenic Centers	29
2.5	Asymmetric Induction by Remote Stereocenters (Beyond 1,3-Induction)	37
2.6	Catalytic Enantioselective Carbonyl Additions of Organozinc Species	38
2.7	Enantioselective Ketone Reduction	42
2.8	Enzymatic Reduction of Ketones	49
2.9	Enantioselective Formation of Cyanohydrins	50
2.10	Enantioselective Alkyne Additions	54
2.11	Asymmetric Carbonyl-Ene Reactions	57
2.12	Conclusion	59
	References	59
3	α-Functionalizations of Enolates	69
3.1	Introduction	69
3.2	Diastereoselective α -Alkylations of Chiral Enolates	71
3.3	Heteroatom-Substituted Enolates	75
3.4	Asymmetric Enolate Alkylations Using Chiral Auxiliaries	78
3.5	Enantioselective Enolate Alkylations	89
3.6	α -Hydroxylations of Enolates	91
3.7	α -Halogenations of Enolates	94
3.8	Conclusion	96
	References	97

4	Aldol Reactions	103
4.1	Introduction	103
4.2	Chiral Enolates Through the Use of Chiral Auxiliaries or Chiral Controller Groups	107
4.2.1	Imides	107
4.2.2	Esters	112
4.2.3	Tethered Amides	114
4.2.4	Chiral Boron Reagents	115
4.3	Substrate Control with Chiral Carbonyl Compounds	118
4.4	Catalytic Enantioselective Aldol Reactions	123
4.4.1	Proline-Catalyzed Aldol Additions	123
4.4.2	<i>In Situ</i> Direct Generation of Enolates and Their Asymmetric Aldol Addition Reactions	124
4.4.3	Enolsilanes and Stannanes	127
4.5	Conclusion	143
	References	143
5	Allylations of C=O Bonds	153
5.1	Introduction	153
5.2	Reactivity of Allylmetal Reagents	156
5.3	Boronate Additions	156
5.4	Enantioselective Additions of Optically Active Allylic Boron Reagents	158
5.5	Diastereoselective Allylations with Chiral Boron Reagents	164
5.6	Mechanistic Aspects – Lewis Acid-Promoted Addition of Allylsilanes and Allylstannanes to Aldehydes	167
5.7	Chelation Control in the Allylation of α - and β -Alkoxy Aldehydes	168
5.8	Allylchromium Reagents	171
5.9	Diastereoselective Allylations with Chiral Silanes and Stannanes	172
5.10	Catalytic Asymmetric Allylations	176
5.11	Conclusion	180
	References	180
6	Chiral Acetals	187
6.1	Introduction	187
6.2	Diastereoselective Reactions of Chiral Acetals	188
6.3	Glycosylations	198
6.4	Spiroketals in Natural Product Synthesis	204
6.5	Conclusion	208
	References	209
7	Alkene Hydroboration	215
7.1	Introduction	215
7.2	Hydroborations with Acyclic Stereocontrol	216
7.3	Metal-Catalyzed Hydroborations	226
7.4	Asymmetric Hydroborations with Chiral Boranes	227

- 7.5 Catalytic Asymmetric Hydroboration, Hydrosilylation, and Hydroalumination 229
- 7.6 Conclusion 232
- References 232

- 8 Reductions of Olefins 235**
- 8.1 Introduction 235
- 8.2 Diastereoselective Olefin Reductions by Catalytic Hydrogenation 236
- 8.3 Alternative Methods for Diastereoselective Olefin Reductions 243
- 8.4 Catalytic Asymmetric Olefin Hydrogenations 247
- 8.5 Conclusion 256
- References 256

- 9 Oxidations of Olefins 263**
- 9.1 Introduction 263
- 9.2 Diastereoselective Epoxidations 264
- 9.3 Enantioselective Epoxidations 268
- 9.4 Asymmetric Ring-Opening of Epoxides 277
- 9.5 Synthesis of Aziridines 282
- 9.6 Iodolactonizations and Other Olefin Cyclizations Induced by Electrophiles 285
- 9.7 Diastereoselective Dihydroxylations of Olefins 291
- 9.8 Enantioselective Dihydroxylations of Olefins 296
- 9.9 Enantioselective Aminohydroxylation of Olefins 300
- 9.10 Conclusion 302
- References 303

- 10 Amino Acids 315**
- 10.1 Introduction 315
- 10.2 Enantioselective Hydrogenations of α, β -Didehydroamino Acids 315
- 10.3 Enolate Alkylations in the Presence of Chiral Auxiliaries 321
- 10.4 Alkylation of Glycine Anion Equivalents in the Presence of Chiral Phase-Transfer Catalysts 324
- 10.5 Enolate Aminations 327
- 10.6 Enzymatic Syntheses of α -Amino Acids 329
- 10.7 Catalytic Asymmetric Strecker Reactions 330
- 10.8 Conclusion 334
- References 336

- 11 Additions to C=N Bonds 343**
- 11.1 Introduction 343
- 11.2 Substrate-Controlled Diastereoselective Additions to C=N Bonds 344
- 11.3 Additions to Imine Derivatives Bearing *N*-Bound Auxiliaries 349
- 11.4 Formation of β -Lactams Through Staudinger Reactions 354

11.5	Intramolecular Diastereoselective Iminium Ion Cyclizations	356
11.5.1	Diastereoselective Mannich Cyclizations in Complex Molecule Synthesis	356
11.5.2	Acyliminium Ion and Related Cyclizations	358
11.6	Pictet–Spengler Reactions	359
11.7	Catalytic Asymmetric Reductions of Imines and Imine Derivatives	362
11.8	Catalytic Enantioselective Mannich and Mannich-Type Reactions	366
11.9	Enantioselective Additions of Carbon Nucleophiles to C=N Bonds	370
11.9.1	Enantioselective Allylations of C=N Bonds	370
11.9.2	Catalytic Enantioselective Imino-Ene Reactions	372
11.9.3	Catalytic Enantioselective Additions of Alkylzinc Reagents to Imines	373
11.9.4	Catalytic Enantioselective Arylations of Imines	375
11.9.5	Catalytic Enantioselective Aza-Henry Reactions	376
11.9.6	Catalytic Enantioselective Cyanations of Ketimines	377
11.10	Conclusion	378
	References	379
12	Conjugate Additions	389
12.1	Introduction	389
12.2	Diastereoselective Conjugate Additions	390
12.3	Diastereoselective Conjugate Additions with Use of Chiral Auxiliaries	395
12.4	Enantioselective Conjugate Additions of Enolates and other Stabilized Carbon Nucleophiles	401
12.5	Enantioselective Conjugate Additions of Organometallic Species	407
12.6	Enantioselective Conjugate Additions of Radicals	414
12.7	Enantioselective Conjugate Additions of Heteroatom Nucleophiles	415
12.8	Conjugate Reductions	417
12.9	Catalytic Enantioselective Stetter Reactions	420
12.10	Conclusion	421
	References	421
13	Chiral Carbanions	431
13.1	Introduction	431
13.2	Organolithium Reagents by Transmetalation of Organostannanes	432
13.3	Carbanions by Reductive Methods	434
13.4	Chiral Carbanions by Deprotonation	436
13.5	Sulfoxide- and Phosphorus-Stabilized Carbanions	443
13.6	Metal-Mediated Enantioselective Olefin Functionalizations	446
13.7	Conclusion	451
	References	452

- 14 Metal-Catalyzed Allylations 457**
 - 14.1 Introduction 457
 - 14.2 Diastereoselective Palladium-Catalyzed Allylation Reactions 457
 - 14.3 Enantioselective Palladium-Catalyzed Allylation Reactions 461
 - 14.4 Iridium-Catalyzed Enantioselective Allylation Reactions 466
 - 14.5 Copper-Catalyzed S_N2' Allylation Reactions 468
 - 14.6 Enantioselective Allylation Reactions Catalyzed by Other Transition Metals 471
 - 14.7 Asymmetric Ring-Opening Reactions of Unsaturated Heterocycles 474
 - 14.8 Conclusion 476
 - References 477

- 15 Cyclopropanations and C–H Insertion Reactions 483**
 - 15.1 Introduction 483
 - 15.2 Diastereoselective Cyclopropanations with Carbenoids Generated from Diazoalkanes 485
 - 15.3 Enantioselective Cyclopropanations with Carbenoids Generated from Diazoalkanes 488
 - 15.4 Diastereoselective Simmons–Smith Cyclopropanations 493
 - 15.5 Enantioselective Simmons–Smith Cyclopropanations 496
 - 15.6 Alternative Classes of Cyclopropanations 497
 - 15.7 Diastereoselective C–H Insertions 501
 - 15.8 Catalytic Enantioselective C–H Insertions 503
 - 15.9 Aminations of C–H Bonds 506
 - 15.10 Conclusion 508
 - References 509

- 16 Sigmatropic Rearrangements 515**
 - 16.1 Introduction 515
 - 16.2 Claisen and Claisen-Type [3,3]-Sigmatropic Rearrangements 516
 - 16.2.1 Simple Diastereoselectivity in Claisen Rearrangements 518
 - 16.2.2 Diastereoselective Claisen Rearrangements in Complex Molecule Synthesis 520
 - 16.2.3 Diastereoselective Claisen Rearrangements Using Chiral Auxiliaries 525
 - 16.2.4 Enantioselective Claisen Rearrangements 526
 - 16.3 Cope and Cope-Type [3,3]-Sigmatropic Rearrangements 528
 - 16.4 [2,3]-Sigmatropic Rearrangements 532
 - 16.4.1 Wittig Rearrangements 534
 - 16.4.2 Sulfoxide, Ammonium, and Oxonium Ylide Rearrangements 536
 - 16.5 Ene Reactions 539
 - 16.6 Nazarov Cyclizations 543
 - 16.7 Conclusion 544
 - References 545

17	Diels–Alder and Hetero-Diels–Alder Reactions	551
17.1	Introduction	551
17.2	Diastereoselective Intermolecular Diels–Alder Reactions	554
17.3	Diastereoselective Intramolecular Diels–Alder Reactions	556
17.4	Diastereoselective Diels–Alder Reactions Using Chiral Auxiliaries	560
17.5	Catalytic Enantioselective Diels–Alder Reactions	564
17.6	Diastereoselective Hetero-Diels–Alder Reactions	572
17.7	Enantioselective Hetero-Diels–Alder Reactions	576
17.8	Conclusion	580
	References	581
18	[3 + 2]- and [2 + 2]-Cycloaddition Reactions	589
18.1	Introduction	589
18.2	Substrate-Controlled Diastereoselective [1,3]-Dipolar Cycloadditions	590
18.3	Diastereoselective [1,3]-Dipolar Cycloadditions Using Chiral Auxiliaries	596
18.4	Catalytic Enantioselective [1,3]-Dipolar Cycloadditions	599
18.5	[3 + 2]-Cycloadditions with Trimethylenemethane Equivalents	604
18.6	Ketene Cycloadditions	607
18.7	Photochemical [2 + 2]-Cycloadditions	610
18.8	Conclusion	615
	References	616
	Index	623
