

Handbook of Heterogeneous Catalysis

8 Volumes

Volume 1

*Edited by
Gerhard Ertl, Helmut Knözinger, Ferdi Schüth,
and Jens Weitkamp*

Second, Completely Revised and Enlarged Edition

WILEY-VCH Verlag GmbH & Co. KGaA

Outline

Vol. 1	1	Introduction	1
	2	Preparation of Solid Catalysts	57
Vol. 2	3	Characterization of Solid Catalysts	721
Vol. 3	4	Model Systems	1259
	5	Elementary Steps and Mechanisms	1375
	6	Macrokinetics and Transport Processes	1693
Vol. 4	7	Activity Loss	1829
	8	Special Catalytic Systems	1873
	9	Laboratory Testing of Solid Catalysts	2019
	10	Reaction Engineering	2075
Vol. 5	11	Environmental Catalysis	2265
	12	Inorganic Reactions	2501
Vol. 6	13	Energy-Related Catalysis	2677
Vol. 7	14	Organic Reactions	3123
Vol. 8	15	Polymerization Reactions	3733
	16	Reactions on Immobilized Biocatalysts	3831
		Index	3867

Contents

	Volume 1		1.2.7.5	Hydrogenation	32
			1.2.7.6	Oxidation	33
	Preface	V	1.2.8	Summary	34
	List of Contributors	XIX		References	35
1	Introduction	1	1.3	The Development of Industrial Heterogeneous Catalysis	37
1.1	Principles of Heterogeneous Catalysis	1		<i>Uwe Dingerdisen, Andreas Martin, Daniel Herein, and Hans Jürgen Wernicke</i>	
	<i>James A. Dumesic, George W. Huber, and Michel Boudart</i>		1.3.1	Introduction	37
1.1.1	Introduction	1	1.3.2	The Raw Materials Situation	38
1.1.2	Definitions of Catalysis and Turnover	1	1.3.2.1	Inorganic Base Chemicals	38
1.1.3	Steps in a Heterogeneous Catalytic Reaction	2	1.3.2.2	Petroleum Refining	39
1.1.4	Desired Characteristics of a Catalyst	3	1.3.2.3	Coal and Natural Gas Processing	41
1.1.5	Reaction Schemes and Adsorbed Species	4	1.3.3	The Base Chemicals	42
1.1.6	Conditions for Catalyst Optimality	6	1.3.3.1	Olefins and Aromatics	43
1.1.7	Catalyst Design	10	1.3.3.2	Alcohols, Ethers, Aldehydes, and Ketones	43
1.1.8	Catalyst Development	11	1.3.3.2.1	Alcohols	43
1.1.9	Bridging Gaps in Heterogeneous Catalysis	12	1.3.3.2.2	Ethers	44
1.1.10	A Philosophical Note	13	1.3.3.2.3	Aldehydes	44
	References	14	1.3.3.3	Acids, Esters, Anhydrides, and Epoxides	44
			1.3.3.3.1	Acids, Esters, Anhydrides	44
			1.3.3.3.2	Epoxides	45
			1.3.3.4	Halogenated Chemicals	45
1.2	Development of the Science of Catalysis	16	1.3.4	The Fine Chemicals	46
	<i>Burtron H. Davis</i>		1.3.4.1	Catalytic Hydrogenation	46
1.2.1	Early Concepts: Berzelius, Liebig, and Faraday	16	1.3.4.1.1	Hydrogenation of Carbon–Carbon Multiple Bonds	46
1.2.2	Wilhelm Ostwald	19	1.3.4.1.2	Hydrogenation of Carbon–Oxygen and Carbon–Nitrogen Multiple Bonds	47
1.2.3	The Concepts of Kinetics and Intermediate Compounds	20	1.3.4.1.3	Reductive Amination	48
1.2.4	Negative Catalysis: Autocatalysis	24	1.3.4.1.4	Nitrile Hydrogenation	48
1.2.5	Adsorption	24	1.3.4.1.5	Hydrogenation of Nitro Groups	48
1.2.6	Active Site: Geometric or Electronic?	26	1.3.4.2	Catalysis on Solid Acids and Bases	48
1.2.7	Selected Systems	29	1.3.4.2.1	Aromatic Substitution (Friedel–Crafts Alkylation and Acylation)	49
1.2.7.1	Ammonia Synthesis	29	1.3.4.2.2	Amination	49
1.2.7.2	Acid Catalysis	30	1.3.4.2.3	Rearrangement, Isomerization	49
1.2.7.3	Zeolites	31	1.3.4.3	Oxidation Catalysis	49
1.2.7.4	Ions in Catalysis	31			

1.3.4.3.1	Oxidation of Alcohols and Aldehydes	49	2.3.1.1	Introduction	81
1.3.4.3.2	Epoxidation and Aromatic Ring Hydroxylation	50	2.3.1.2	The Concept of Fused Catalysts	82
1.3.5	Environmental Catalysis	50	2.3.1.3	Thermodynamic and Kinetic Considerations	85
1.3.5.1	Cleaning of Automobile Emissions	50	2.3.1.4	Sulfuric Acid Catalyst	87
1.3.5.2	Removal of Harmful Emissions from Stationary Sources	52	2.3.1.5	Metallic Glasses	88
1.3.5.3	Wastewater Treatment	53	2.3.1.6	Tribochemistry	90
1.3.5.4	Fuel Cell Catalysis	53	2.3.1.7	Mesostructure of Fused Catalyst Materials	91
1.3.5.5	Photocatalytic Applications	54		References	91
	References	54			
2	Preparation of Solid Catalysts	57	2.3.2	Skeletal Metal Catalysts	92
				<i>Andrew James Smith and Mark Sebastian Wainwright</i>	
2.1	Development of Industrial Catalysts	57	2.3.2.1	Introduction	92
	<i>Ewald F. Gallei, Michael Hesse, and Ekkehard Schwab</i>		2.3.2.2	General Aspects	93
2.1.1	Introduction	57	2.3.2.2.1	Alloy Preparation	93
2.1.2	Types and Properties of Technical Catalysts	57	2.3.2.2.2	Activation Using Alkali Leaching	93
2.1.3	Characterization of Technical Catalysts	60	2.3.2.2.3	Storage and Handling	94
2.1.4	High-Throughput Experimentation (HTE)	62	2.3.2.2.4	Advantages of Skeletal Metal Catalysts	94
2.1.5	Identification of Technical Catalysts	63	2.3.2.3	Skeletal Nickel Catalysts	94
2.1.6	Production of Technical Catalysts	65	2.3.2.3.1	Alloy Preparation of Skeletal Nickel Catalysts	94
2.1.7	Conclusions	65	2.3.2.3.2	Properties of Skeletal Nickel Catalysts	95
	References	66	2.3.2.3.3	Uses of Skeletal Nickel Catalysts	95
			2.3.2.3.4	The Promotion of Skeletal Nickel Catalysts	95
2.2	Computer-Aided Design of Solid Catalysts	66	2.3.2.4	Skeletal Copper Catalysts	96
	<i>Martin Holena and Manfred Baerns</i>		2.3.2.4.1	Alloy Preparation of Skeletal Copper Catalysts	96
2.2.1	Introduction	66	2.3.2.4.2	Properties of Skeletal Copper Catalysts	97
2.2.2	Theoretical Methods	66	2.3.2.4.3	Uses of Skeletal Copper Catalysts	97
2.2.3	Rational Methods for the Design of Catalytic Experiments	68	2.3.2.4.4	Promotion of Skeletal Copper Catalysts	9
2.2.3.1	The Statistical Design of Experiments	68	2.3.2.5	Skeletal Cobalt Catalysts	99
2.2.3.2	Optimization Methods for Empirical Objective Functions	69	2.3.2.6	Other Skeletal Metal Catalysts	99
2.2.3.2.1	Evolutionary Methods	70		References	99
2.2.3.2.2	Other Stochastic Methods	72	2.3.3	Precipitation and Coprecipitation	100
2.2.3.2.3	Deterministic Methods	72		<i>Ferdi Schüth, Michael Hesse, and Klaus K. Unger</i>	
2.2.3.3	Concluding Remarks	73	2.3.3.1	Introduction	100
2.2.4	Data Analysis and Data Mining	74	2.3.3.2	General Principles Governing Precipitation from Solutions	101
2.2.4.1	Statistical Methods: An Overview	74	2.3.3.2.1	Physico-Chemical Considerations	102
2.2.4.2	Artificial Neural Networks	75	2.3.3.2.2	Chemical Considerations	104
2.2.4.3	Concluding Remarks	77	2.3.3.2.3	Process Considerations	105
2.2.5	Conclusions	79	2.3.3.3	Influencing the Properties of the Final Product	106
	References	79	2.3.3.3.1	Influence of Raw Materials	106
2.3	Bulk Catalysts and Supports	81	2.3.3.3.2	Influence of Concentration and Composition	108
2.3.1	Fused Catalysts	81	2.3.3.3.3	Solvent Effects	108
	<i>Robert Schlögl</i>		2.3.3.3.4	Influence of Temperature	109

2.3.3.3.5	Influence of pH	110	2.3.6	Ordered Mesoporous Materials	178
2.3.3.3.6	Influence of Aging	110		<i>Freddy Kleitz</i>	
2.3.3.3.7	Influence of Additives	111	2.3.6.1	Introduction	178
2.3.3.4	Prototypical		2.3.6.2	Ordered Mesoporous	
	Examples of Precipitated Catalysts and			Molecular Sieves: MCM-41	179
	Supports	111	2.3.6.3	Synthesis of Ordered Mesoporous	
2.3.3.4.1	Silica as Support Material	111		Materials	180
2.3.3.4.2	Active Aluminas	113	2.3.6.3.1	Synthesis Strategies for Mesostructure	
2.3.3.4.3	Ni/Al ₂ O ₃ Catalysts by Coprecipitation	115		Formation	180
2.3.3.4.4	V/P/O		2.3.6.3.2	Inorganic Polymerization and Self-Assembly	
	Catalysts for Butane Oxidation to Maleic			with Surfactants	182
	Anhydride	116	2.3.6.3.3	Synthesis Pathways and Structural	
2.3.3.5	Conclusions	116		Diversity	187
	References	116	2.3.6.3.4	Pore Size Tailoring and Structure	
				Engineering	193
2.3.4	Sol–Gel Process	119	2.3.6.3.5	Removal of the Template	197
	<i>Miron V. Landau</i>		2.3.6.4	Functionalization of Ordered Mesoporous	
2.3.4.1	Introduction	119		Materials	200
2.3.4.2	Physico-Chemical Basis and Principles of		2.3.6.4.1	Functionalization Strategies	200
	Sol–Gel Processing for the Preparation		2.3.6.4.2	Surface Properties	201
	of Porous Solids	121	2.3.6.4.3	Surface Functionalization	201
2.3.4.3	Application of Sol–Gel Processing		2.3.6.4.4	Framework Functionalization	203
	for the Preparation of Solid Catalysts	128	2.3.6.5	Non-Siliceous Mesoporous Materials	205
2.3.4.3.1	Bulk Catalytic-Phase Materials: Xerogels			and Mesoporous Materials	205
	and Aerogels	129	2.3.6.5.1	Transition Metal Oxides	205
2.3.4.3.2	Catalytic Materials and Modifiers		2.3.6.5.2	Alumina	206
	Entrapped in Porous Matrices	134	2.3.6.5.3	Other Non-Siliceous Compositions	207
2.3.4.3.3	Catalytic Coatings, Films, and		2.3.6.6	Hard Templating (Nanocasting)	208
	Membranes	147	2.3.6.7	Morphology Control	211
2.3.4.4	Summary	155	2.3.6.8	Concluding Remarks	213

Handbook of Heterogeneous Catalysis

8 Volumes

Volume 2

*Edited by
Gerhard Ertl, Helmut Knözinger, Ferdi Schüth,
and Jens Weitkamp*

Second, Completely Revised and Enlarged Edition

WILEY-
VCH

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

	Volume 2	
	Preface	V
	List of Contributors	XV
3	Characterization of Solid Catalysts	721
3.1	Physical Properties	721
3.1.1	Surface Area and Porosity	721
	<i>Alexander V. Neimark, Kenneth S. W. Sing, and Matthias Thommes</i>	
3.1.1.1	Introduction	721
3.1.1.2	Physisorption of Gases	722
3.1.1.2.1	Determination of Surface Area	723
3.1.1.2.2	Assessment of Porosity	726
3.1.1.3	Adsorption at the Liquid–Solid Interface	733
3.1.1.3.1	Adsorption from Solution	733
3.1.1.3.2	Heat of Immersion	734
3.1.1.4	Mercury Porosimetry	735
3.1.1.5	General Conclusions	736
	References	736
3.1.2	Particle Size and Dispersion Measurements	738
	<i>G�rard Bergeret and Pierre Gallezot</i>	
3.1.2.1	Definitions and Generalities	738
3.1.2.1.1	Particles	738
3.1.2.1.2	Particle Size	739
3.1.2.1.3	Nuclearity of Particles	739
3.1.2.1.4	Dispersion	739
3.1.2.1.5	Relationships Between Particle Size, Surface Area and Dispersion	739
3.1.2.1.6	Methods of Particle Size Measurement	741
3.1.2.2	Particle Size Measurements by Gas Chemisorption	741
3.1.2.2.1	Introduction and Principles	741
3.1.2.2.2	Gas Adsorption–Desorption Methods	742
3.1.2.2.3	Choice of Adsorbate Gases	744
3.1.2.2.4	Hydrogen Chemisorption; Hydrogen–Oxygen Titration	744
3.1.2.2.5	Conclusion and Recommendations	746
3.1.2.3	X-Ray Diffraction Line Broadening Analysis	746
3.1.2.3.1	Introduction	746
3.1.2.3.2	Elementary Line Broadening Analysis: the Scherrer Equation	746
3.1.2.3.3	Complete Line Profile Analysis: the Warren–Averbach Method	747
3.1.2.3.4	Examples of Application of Classical LBA to Catalysts	747
3.1.2.3.5	Whole-Powder Pattern Fitting Methods: the Rietveld Refinement	748
3.1.2.3.6	Limits of Application of Methods	749
3.1.2.3.7	Conclusion	750
3.1.2.4	Small-Angle X-Ray Scattering Analysis	750
3.1.2.4.1	Introduction	750
3.1.2.4.2	Specific Surface Area Measurements: Porod’s Law	751
3.1.2.4.3	Mean Size Parameters: Guinier Radius	751
3.1.2.4.4	Calculation of Size Distribution	751
3.1.2.4.5	Application of SAXS to Metal Particle Size Determination in Supported Catalysts	752
3.1.2.4.6	Anomalous Small-Angle X-Ray Scattering (ASAXS)	753
3.1.2.4.7	Conclusion	754
3.1.2.5	Determination of Particle Size by Electron Microscopy	754
3.1.2.5.1	Scope	754
3.1.2.5.2	Fundamentals of Imaging and Contrast	755
3.1.2.5.3	Preparation of Samples for TEM and STEM Examination	756
3.1.2.5.4	Particle Size Measurement	757
3.1.2.5.5	Selected Examples of Particle Size Distribution	759

3.1.2.5.6	Selected Examples of 3D Localization of Particles in Supports by Electron Tomography	761	3.1.3.4.6	Imaging of Oxide Surfaces	850
3.1.2.6	Particle Size Measurements by Magnetic Methods	761	3.1.3.4.7	Catalyst Design Based on Model System Studies	859
	References	763	3.1.3.4.8	Conclusion	865
				References	866
3.1.3	Structure and Morphology	765	3.1.3.5	Heterogeneous Catalysis and High Electric Fields	870
3.1.3.1	X-Ray Powder Diffraction	765		<i>Norbert Kruse and Thierry Visart de Bocarmé</i>	
	<i>Daniel Herein</i>		3.1.3.5.1	Introduction	870
3.1.3.1.1	Introduction	765	3.1.3.5.2	Electric Fields	870
3.1.3.1.2	Phase Analysis	766	3.1.3.5.3	Applications in Fundamental Research on Heterogeneous Catalysis	875
3.1.3.1.3	Peak Profile Analysis	769	3.1.3.5.4	Field-Induced Surface Phenomena	890
3.1.3.1.4	Full X-Ray Powder Pattern Analysis	770	3.1.3.5.5	Field-Induced Phenomena at Extended Surfaces and Interfaces	891
3.1.3.1.5	<i>In Situ</i> X-Ray Powder Diffraction	770	3.1.3.5.6	Conclusion	892
3.1.3.1.6	Conclusion	773		References	892
	References	773			
3.1.3.2	Applications of X-Ray Absorption Spectroscopy in Heterogeneous Catalysis: EXAFS, Atomic XAFS and Delta XANES	774	3.1.3.6	Gamma Spectroscopies	895

Handbook of Heterogeneous Catalysis

8 Volumes

Volume 3

*Edited by
Gerhard Ertl, Helmut Knözinger, Ferdi Schüth,
and Jens Weitkamp*

Second, Completely Revised and Enlarged Edition

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

	Volume 3		
	Preface V		
	List of Contributors XVII		
4	Model Systems 1259		
4.1	Single Crystal Surfaces 1259 <i>Anderson L. Marsh, Fabio H. Ribeiro, and Gabor A. Somorjai</i>	4.3	Metallic Glasses 1285 <i>Alfons Baiker and Árpád Molnár</i>
4.1.1	Introduction 1259	4.3.1	Introduction 1285
4.1.2	Techniques 1259	4.3.2	Preparation 1285
4.1.3	Examples of Studies with Single Crystals 1267	4.3.3	Chemical and Structural Properties 1285
4.1.3.1	The Active Site 1268	4.3.4	Metallic Glasses in Catalysis Research 1287
4.1.3.2	Model of a Catalytic Surface 1270	4.3.4.1	Research into Metallic Glasses in As-Quenched State 1287
4.1.3.3	Catalysis over an Adsorbed Overlayer 1271	4.3.4.2	Metallic Glasses as Precursors to Catalytically Active Materials 1289
4.1.3.4	Structure-Sensitive or Structure-Insensitive Reactions 1273	4.3.5	Factors Influencing Chemical and Structural Properties of Catalytic Materials Derived from Metallic Glasses 1290
4.1.4	Single Crystals are the Standard in Catalysis 1274	4.3.5.1	Chemical Composition 1290
4.1.5	Examples of Complex Model Catalyst Systems 1274	4.3.5.2	Chemical and Structural Homogeneity 1290
4.1.6	The Future 1275	4.3.5.3	Thermal Stability and Crystallization Behavior 1290
	References 1276	4.3.5.4	Oxidation Behavior 1291
4.2	Supported Metal Cluster Catalysts 1277 <i>Bruce C. Gates</i>	4.3.5.5	Dissolution of Gases 1291
4.2.1	Introduction 1277	4.3.5.6	Segregation Phenomena 1291
4.2.2	Synthesis of Supported Metal Clusters from Molecular Precursors 1277	4.3.6	Case Studies 1291
4.2.3	Structures of Supported Metal Clusters 1280	4.3.6.1	CO Oxidation Catalysts Prepared from Metallic Glasses 1291
4.2.4	Bonding of Clusters to Supports 1280	4.3.6.1.1	Pd/ZrO ₂ Catalysts from Amorphous Pd–Zr Alloys 1291
4.2.5	Ligands on Supported Metal Clusters 1282	4.3.6.1.2	Promoted Au–Zr Catalysts from Ternary Au-Containing Glassy Alloys 1292
4.2.6	Catalysis 1282	4.3.6.2	Methanation over Ni Alloys 1293
4.2.7	Summary and Assessment 1284	4.3.6.3	Dehydrogenation over Cu–M (Ti, Zr or Hf) Catalysts 1294
	References 1284	4.3.7	Conclusions and Outlook 1294 References 1295
		4.4	Bimetallic Model Catalysts 1298 <i>José A. Rodríguez</i>
		4.4.1	Introduction 1298
		4.4.2	Structure of Bimetallic Surfaces 1298

4.4.3	Electronic Properties of Bimetallic Surfaces	1301	4.6.1	Introduction	1338
4.4.4	Chemical and Catalytic Properties of Bimetallic Surfaces	1304	4.6.1.1	Chemical Reactions over TiO ₂	1339
4.4.5	Conclusions	1308	4.6.1.2	Surface Defects	1339
	References	1308	4.6.2	The Surface-Adsorbate System	1340
4.5	Ultrathin Oxide Films	1309	4.6.2.1	Formic Acid	1341
	<i>Hans-Joachim Freund and D. Wayne Goodman</i>		4.6.2.1.1	Dissociative Adsorption of Formic Acid on the 1 × 1 Terminated (011) TiO ₂ Surface	1342
4.5.1	Introduction	1309	4.6.2.2	Ammonia	1344
4.5.2	Magnesium Oxide	1310	4.6.2.3	Glutaric Acid: A Dicarboxylic Acid	1346
4.5.2.1	MgO(100)/Mo(100)	1310	4.6.2.3.1	Surface Reaction	1347
4.5.2.2	MgO(100)/Ag(100)	1312	4.6.3	Conclusions and Comments	1350
4.5.2.3	MgO(111)/Mo(110)	1313		References	1350
4.5.3	Nickel Oxide	1313	4.7	Microcrystalline Oxides: Bridging the Gap Between Single Crystals and Dispersed Oxides	1352
4.5.3.1	NiO(100)/Ni(100), Mo(100)	1313		<i>Adriano Zecchina, Giuseppe Spoto, Domenica Scarano, and Silvia Bordiga</i>	
4.5.3.2	NiO(111)/Ni(111)	1315	4.7.1	Introduction	1352
4.5.4	Alumina	1316	4.7.2	Effect of the Synthesis Procedure and Thermal Treatments on the Habit of MgO Microcrystals	1353
4.5.4.1	Alumina/NiAl(110)	1316	4.7.3	Effect of Crystallite Dimension and Perfection on IR Spectra of H ₂ Adsorbed on MgO: From High-Surface-Area Samples to Single Crystals	1354
4.5.4.2	Alumina/Ni ₃ Al(111)	1320	4.7.4	Effect of Surface Area on the IR Spectra of CO Adsorbed on MgO: Comparison with (100) Single-crystal Faces	1355
4.5.4.3	Al ₂ O ₃ (111)/Ta(110)	1320	4.7.5	Conclusions	1359
4.5.4.4	Al ₂ O ₃ (111)/Mo(110) and Cu/Al ₂ O ₃ (111)/Mo(110)	1321		References	1359
4.5.5	Silica	1322	4.8	Oxide Solid Solutions	1362
4.5.5.1	SiO ₂ /Mo(110)	1322		<i>Alessandro Cimino and Frank S. Stone</i>	
4.5.5.2	SiO ₂ /Mo(211)	1322	4.8.1	Introduction	1362
4.5.5.3	Cu/SiO ₂ /Mo(110)	1323	4.8.2	Principles, Preparation, and Characterization	1362
4.5.5.4	Pd/SiO ₂ /Mo(110)	1323	4.8.2.1	Principles	1362
4.5.5.5	Au/SiO ₂ /Mo(211) and Au/TiO ₂ /SiO ₂ /Mo(211)	1325	4.8.2.2	Preparation	1363
4.5.6	Titania	1325	4.8.2.3	Characterization	1364
4.5.6.1	Ti _x O _y /Mo(100), Mo(110), Pt(111), Ni(110), W(100)	1325	4.8.2.3.1	Bulk Composition and Structure	1364
4.5.6.2	Au/TiO _x /Mo(211)	1326	4.8.2.3.2	Surface Composition	1364
4.5.7	Chromia	1327	4.8.3	Catalysis in the Context of Activity	1365
4.5.7.1	Cr ₂ O ₃ (111)/Cr(110)	1327	4.8.3.1	N ₂ O Decomposition, CO Oxidation and H ₂ –D ₂ Equilibration	1365
4.5.8	Vanadia	1328	4.8.3.2	Combustion of Hydrocarbons	1367
4.5.8.1	Vanadium Sesquioxide	1328	4.8.3.2.1	Perovskite Catalysts	1367
4.5.9	Iron oxides	1329	4.8.3.2.2	Hexa-Aluminate Catalysts	1367
4.5.9.1	FeO/Pt(111), Fe ₂ O ₃ (0001)/Pt(111), Fe ₃ O ₄ (001)/Pt(111)	1329	4.8.3.2.3	Ceria-Containing Catalysts	1368
4.5.9.2	Pd, Au on Iron Oxides	1331	4.8.4	Catalysis in the Context of Selectivity	1368
4.5.10	Niobia	1331	4.8.4.1	Selective Oxidation	1368
4.5.11	Molybdenum Oxide	1332			
4.5.12	Ceria	1332			
4.5.13	Binary Oxides	1332			
4.5.13.1	NiO/MgO, NiO/CaO, MgO/NiO, CaO/NiO/Mo(100)	1332			
4.5.14	Conclusions	1332

Contents

	Volume 4		
	Preface	V	
	List of Contributors	XVII	
7	Activity Loss	1829	
7.1	Deactivation and Regeneration	1829	
	<i>Jacob A. Moulijn, Annelies E. van Diepen, and Freek Kapteijn</i>		
7.1.1	Introduction	1829	
7.1.2	Causes of Deactivation	1830	
7.1.2.1	Poisoning	1832	
7.1.2.2	Formation of Deposits	1834	
7.1.2.3	Thermal Degradation	1838	
7.1.2.4	Mechanical Deactivation	1840	
7.1.2.5	Corrosion/Leaching	1841	
7.1.3	Stability Too Low: What To Do?	1841	
7.1.3.1	Measures on the Scale of the Catalyst Particle	1841	
7.1.3.2	Tailored Reactor and Process Design	1842	
7.1.3.2.1	Relation Between Time-Scale of Deactivation and Choice of Reactor	1842	
7.1.3.2.2	Chemical Reaction Engineering Solutions Allowing for Regeneration	1842	
7.1.3.3	Good Engineering Practice	1843	
7.1.3.3.1	Feed Purification	1843	
7.1.3.3.2	Optimizing Reaction Conditions	1844	
7.1.3.3.3	Optimal Conditions as a Function of Time-on-Stream	1844	
7.1.3.4	Regeneration or Replacement of the Catalyst	1844	
7.1.3.4.1	Poisoning	1844	
7.1.3.4.2	Deposits	1844	
7.1.3.4.3	Sintering	1845	
7.1.3.4.4	Leaching	1845	
7.1.4	Conclusion	1845	
	References	1845	
7.2	Recycling of Spent Catalysts	1846	
7.2.1	Recycling of Spent Catalysts Containing Precious Metals	1846	
	<i>Christian Hagelüken</i>		
7.2.1.1	Introduction	1846	
7.2.1.2	Impact of Catalysis on Precious Metals Demand and Price Development	1847	
7.2.1.3	Recycling Technologies	1849	
7.2.1.4	Responsible Care and Trans-Border Shipments	1853

10.7.3.1	Membrane Types	2202	10.7.5.2	Catalytic Membrane Contactors	2234
10.7.3.1.1	Organic Polymers	2202	10.7.5.2.1	Gas–Liquid Applications	2234
10.7.3.1.2	Solid Polymer Electrolytes	2202	10.7.5.2.2	Liquid–Liquid Applications	2237
10.7.3.1.3	Metals	2202	10.7.5.2.3	Gas–Gas Applications	2237
10.7.3.1.4	Microporous Membranes	2203	10.7.5.3	Perspectives	2238
10.7.3.1.5	Ceramic Proton Conductors and Cermets	2205	10.7.6	Design of Catalytic Membrane Modules	2238
10.7.3.1.6	Final Remarks	2206	10.7.6.1	Novel Inorganic Membrane Supports	2238
10.7.3.2	Selective Removal of Hydrogen	2206	10.7.6.2	High-Temperature Membrane Reactor Design	2238
10.7.3.2.1	Dehydrogenation	2208	10.7.7	Concluding Remarks	2240
10.7.3.2.2	Water Gas Shift Reaction	2215		References	2241
10.7.3.2.3	Reforming	2217			
10.7.3.3	Selective Supply of Hydrogen	2223	10.8	Microstructured Reactors	2248
10.7.3.3.1	Hydrogenation	2223		<i>Lioubov Kiwi-Minsker and Albert Renken</i>	
10.7.3.3.2	Hydroxylation by <i>In-Situ</i> H ₂ O ₂ Formation	2224	10.8.1	Introduction	2248
10.7.3.4	Perspectives	2225	10.8.2	Microstructured Reactors for Gas-Phase Catalytic Reactions	2249
10.7.4	Reactors with Oxygen-Selective Membranes	2226	10.8.2.1	Packed-Bed Reactors	2249
10.7.4.1	Membrane Types	2226	10.8.2.2	Catalytic Wall Microstructured Reactors	2249
10.7.4.1.1	Mixed Oxygen-Ion- and Electron-Conducting Membranes	2226	10.8.3	Main Characteristics of Microstructured Reactors	2253
10.7.4.1.2	Solid Electrolytes for Electrochemical Operation	2227	10.8.3.1	Pressure Drop	2253
10.7.4.1.3	Membranes for Selective Removal of Oxygenates	2227	10.8.3.2	Residence Time Distribution (RTD)	2254
10.7.4.1.4	Pore Membranes for Non-Selective Oxygen Feeding	2228	10.8.3.3	Mass Transfer Performance	2257
10.7.4.2	Selective Supply of Oxygen	2228	10.8.3.3.1	Internal Mass Transfer	2257
10.7.4.2.1	Production of Pure Oxygen and of Oxygen-Enriched Air	2228	10.8.3.3.2	External Mass Transfer	2258
10.7.4.2.2	Partial Oxidation of Methane to Synthesis Gas	2229	10.8.3.4	Heat Transfer Performance	2259
10.7.4.2.3	Oxidative Dehydrogenation of Light Alkanes to Olefins	2230	10.8.4	Design Criteria for Microstructured Multichannel Reactors	2259
10.7.4.2.4	Oxidative Coupling of Methane to C ₂ -Hydrocarbons	2231	10.8.4.1	Heterogeneous Catalytic Reactions Limited by Chemical Transformation	2260
10.7.4.3	Solid Electrolyte Membrane Reactors	2232	10.8.4.2	Heterogeneous Catalytic Reactions Limited by Mass Transfer	2261
10.7.4.4	Perspectives	2232	10.8.5	Conclusions and Outlook	2261
10.7.5	Catalytic Reactors with Non-Selective Membranes	2233		References	2263

Handbook of Heterogeneous Catalysis

8 Volumes

Volume 5

*Edited by
Gerhard Ertl, Helmut Knözinger, Ferdi Schüth,
and Jens Weitkamp*

Second, Completely Revised and Enlarged Edition

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

	Volume 5	
	Preface V	
	List of Contributors XVII	
11	Environmental Catalysis 2265	
11.1	Catalysis in Environmental Protection 2265	
	<i>Wilhelm Keim</i>	
11.1.1	Introduction 2265	
11.1.2	How Novel is Environmental Catalysis? 2266	
11.1.3	Environmental Catalysis: Potential and Opportunities 2267	
11.1.4	Catalysis for Environmentally Benign Products and Processes 2269	
11.1.4.1	Products and Environmental Concern 2269	
11.1.4.2	Processes and Environmental Compatibility 2270	
11.1.5	Catalysis for Environmental Protection: Future Prospects 2271	
	References 2273	
11.2	Automotive Exhaust Treatment 2274	
	<i>Egbert S. J. Lox</i>	
11.2.1	Introduction 2274	
11.2.1.1	Origin of Emissions 2274	
11.2.1.2	Importance of Road Transport 2274	
11.2.2	Legislation 2275	
11.2.2.1	History 2275	
11.2.2.2	Present and Future 2275	
11.2.2.3	Measurement of Emissions 2278	
11.2.2.3.1	Passenger Cars and Light Duty Vehicles 2278	
11.2.2.3.2	Heavy Duty Trucks and Buses 2279	
11.2.3	Technology to Meet Legislation 2280	
11.2.3.1	Spark-Ignition Engines 2280	
	11.2.3.2 Compression-Ignition Engines 2283	
	11.2.4 Catalytic Systems for Gasoline-Fueled, Indirect Injection Spark-Ignition Engines 2284	
	11.2.4.1 Introduction 2284	
	11.2.4.2 Engine-Out Emissions 2284	
	11.2.4.3 Reactions 2285	
	11.2.4.4 Emission Control Concepts 2286	
	11.2.4.5 Aspects of Three-Way Catalyst Design 2287	
	11.2.4.5.1 General Aspects 2287	
	11.2.4.5.2 Bead Catalysts 2288	
	11.2.4.5.3 Ceramic Monolithic Substrates 2290	
	11.2.4.5.4 Metallic Monolithic Substrates 2292	
	11.2.4.5.5 Washcoat 2294	
	11.2.4.5.6 Precious Metals 2296	
	11.2.4.6 Aspects of Three-Way Catalyst Performance 2298	
	11.2.4.6.1 Introduction 2298	
	11.2.4.6.2 Measurement of Catalyst Performance 2298	
	11.2.4.6.3 Influence of Catalyst Operating Conditions 2299	
	11.2.4.6.4 Influence of Substrate and Converter Design 2304	
	11.2.4.6.5 Influence of Catalyst Formulation 2307	
	11.2.4.7 Deactivation of Three-Way Catalysts 2310	
	11.2.4.7.1 Introduction 2310	
	11.2.4.7.2 Assessment of Durability 2310	
	11.2.4.7.3 Selected Deactivation Phenomena 2312	
	11.2.4.8 Future Developments and Concepts 2316	
	11.2.5 Catalytic Systems for Gasoline-Fueled Direct Injection Spark-Ignition Engines 2318	
	11.2.5.1 Introduction 2318	
	11.2.5.2 Aspects of Operation of NO _x -Adsorber Systems 2320	
	11.2.5.3 Aspects of Deactivation of NO _x -Adsorber Systems 2323	

11.2.6	Catalytic Systems for Diesel-Fueled Compression-Ignition Engines	2324	11.3.3.4.12	The Influence of Water	2358
11.2.6.1	Introduction	2324	11.3.3.4.13	The Influence of O ₂	2358
11.2.6.2	Diesel Oxidation Catalysts	2327	11.3.3.5	Modeling	2358
11.2.6.2.1	Aspects of Diesel Oxidation Catalyst Design	2327	11.3.3.5.1	Definition of Different Model Types	2359
11.2.6.2.2	Aspects of Deactivation	2331	11.3.3.5.2	Estimation of Interphase Mass Transfer	2359
11.2.6.2.3	Future Developments and Concepts	2334	11.3.3.5.3	Intraporous Mass Transfer	2360
11.2.6.3	Catalytic Diesel Particulate Filter Systems	2335	11.3.3.5.4	Kinetic Expressions	2360
11.2.6.3.1	Aspects of Diesel Filter System Design	2335	11.3.3.5.5	The Feasibility of Different Models	2361
11.2.6.3.2	Aspects of Filter System Operation	2336	11.3.3.6	Deactivation	2361
11.2.6.4	Diesel NO _x -Reduction Systems	2338	11.3.3.6.1	Chemical Poisoning	2362
11.2.6.4.1	Introduction	2338	11.3.3.6.2	Surface Fouling, Pore and Channel Clogging	2364
11.2.6.4.2	HC-DeNO _x -Systems	2338	11.3.3.6.3	Sintering	2366
11.2.6.4.3	Diesel NO _x -adsorber systems	2339	11.3.3.6.4	Catalyst Management and Regeneration	2366
11.2.6.4.4	SCR Systems	2340	11.3.3.7	SCR Catalyst Testing	2366
11.2.6.4.5	Future Developments and Concepts	2341	11.3.3.7.1	Laboratory- and Bench-Scale Testing	2368
11.2.7	Conclusions and Outlook	2342	11.3.3.7.2	Pilot-Scale Testing	2369
	References	2343	11.3.3.7.3	Slip-Stream Reactors	2369
			11.3.3.7.4	Full-Scale Catalyst Testing	2369
			11.3.3.7.5	Gas Sampling and Analysis	2370
11.3	Flue Gases from Stationary Sources	2345	11.3.4	Other Emissions	2370
	<i>Pär Gabrielsson and Henrik Guldberg Pedersen</i>		11.3.4.1	Sulfur Removal	2370
11.3.1	Emissions from Stationary Sources	2345	11.3.4.1.1	The Wet Sulfuric Acid (WSA) Process and Combined WSA and DeNO _x (SNOX)	2370
11.3.2	Drivers for Flue Gas Cleaning Technology	2346	11.3.4.2	Hydrogen Sulfide	2373
11.3.2.1	The USA	2346	11.3.4.3	Carbon Monoxide	2374
11.3.2.2	Europe	2346	11.3.4.4	Carbon Dioxide	2374
11.3.2.3	Asia	2348	11.3.4.5	Hydrocarbons	2375
11.3.2.3.1	China	2348	11.3.4.6	Dioxins	2376
11.3.2.3.2	Japan	2348	11.3.4.7	Hg Oxidation and Capture	2377
11.3.3	NO _x Removal Technologies	2348	11.3.4.7.1	Hg Oxidation Thermodynamics	2378
11.3.3.1	Nitrous Oxide (N ₂ O)	2349	11.3.4.7.2	Hg Removal from Coal-Fired Power Plants	2378
11.3.3.2	Selective Catalytic Reduction (SCR)	2349	11.3.4.7.3	Hg Oxidation Mechanism and Catalysis	2379
11.3.3.3	SCR Technology	2350	11.3.4.7.4	Alternative Processes	2380
11.3.3.4	SCR Catalysts	2352	11.3.5	Multipollutant Processes	2380
11.3.3.4.1	Different Catalyst Types	2352	11.3.5.1	The DESONOX Process	2380
11.3.3.4.2	Choice of Carrier	2353	11.3.5.2	Other Combined Processes	2381
11.3.3.4.3	Optimization of Activity	2353	11.3.5.3	Catalytic Filters	2381
11.3.3.4.4	The Effect of Increasing V ₂ O ₅ Loading	2353	11.3.6	New Technologies	2382
11.3.3.4.5	Activation Energy as a Function of Vanadium Content	2355	11.3.6.1	Plasma-Assisted Processes	2382
11.3.3.4.6	The Effect of Co-Oxides	2356	11.3.6.2	Photocatalytic Processes	2382
11.3.3.4.7	SCR Reaction Mechanism for Vanadium Catalysts: the Eley–Rideal Route	2356		References	2382
11.3.3.4.8	Global Kinetics	2357	11.4	Catalytic Dehalogenation	2385
11.3.3.4.9	The Importance of Brønsted Acidity	2357		<i>Russell Francis Howe</i>	
11.3.3.4.10	The Influence of Reoxidation or NO ₂	2357	11.4.1	Introduction	2385
11.3.3.4.11	The Influence of Gas Composition on Reaction Rate	2358	11.4.2	Organohalogen Compounds	2386
			11.4.3	Reaction Types	2387

11.4.3.1	Decomposition	2387	11.5.5.6	Cobalt-Based Catalysts	2405
11.4.3.2	Hydrodehalogenation	2387	11.5.5.6.1	Co-Based Catalysts: CVOC Oxidation	2406
11.4.3.3	Oxidation	2388	11.5.5.7	Nickel-Based Catalysts	2406
11.4.3.4	Hydrolysis	2389	11.5.5.8	Tungsten-Based Catalysts	2406
11.4.4	Supported Metal Catalysts	2389	11.5.5.9	Uranium-Based Catalysts	2407
11.4.5	Zeolite Catalysts	2392	11.5.5.9.1	U-Based Catalysts: CVOC Oxidation	2407
	References	2393	11.5.6	Kinetics	2407

11.5.1	Introduction	2394	11.5.7	Summary	2408
11.5.1.1	Significance of the Problem	2394		References	2408
11.5.1.2	Applications of Catalytic Oxidation for VOC Control	2394	11.6	Catalytic Combustion	2411
11.5.1.3	Catalytic Oxidation	2395		<i>Pio Forzatti, Gianpiero Groppi, and Cinzia Cristiani</i>	
11.5.1.4	Scope of this Chapter	2395	11.6.1	Introduction	2411
11.5.2	Reactors and Process Configurations for Catalytic Oxidation Systems	2395	11.6.2	Base Concepts and System Requirements	2412
11.5.2.1	Reactors	2396	11.6.3	Design Approaches	2413
11.5.2.2	Process Configurations	2396	11.6.3.1	Fully Catalytic Combustor	2413
11.5.3	General Considerations	2397	11.6.3.2	Fuel Staging	2414
11.5.3.1	Specific Problems in Chlorinated VOC (CVOC) Oxidation	2397	11.6.3.3	Partial Catalytic Hybrid Combustor	2414
11.5.3.1.1	Catalyst Deactivation in CVOC Oxidation	2397	11.6.4	Commercialization Status and Perspectives	2415
11.5.3.1.2	Byproducts	2397	11.6.5	Fuel-Rich Catalytic Combustion	2416
11.5.3.1.3	Higher Temperatures	2398	11.6.6	Catalytic Materials	2418
11.5.3.2	Mixture Effects	2398	11.6.6.1	Honeycomb Substrate	2418
11.5.3.3	Deactivation	2398	11.6.6.2	Active Catalyst Layer	2418
11.5.4	Noble Metal Catalysts	2399	11.6.6.2.1	PdO-Based Catalysts	2418
11.5.4.1	Pt catalysts	2399	11.6.6.2.2	Metal-Substituted Hexaaluminate (HA) Catalysts	2420
11.5.4.1.1	Effect of Synthesis Conditions	2399	11.6.6.2.3	Rich Combustion Catalysts	2421
11.5.4.1.2	Support Effects	2399	11.6.7	Modeling of Catalytic Combustors	2423
11.5.4.1.3	Pt-Based Catalysts: Catalyst Deactivation	2400	11.6.8	Status and Outlook	2423
11.5.4.2	Pd catalysts	2400		References	2424
11.5.4.2.1	Effect of Reduction	2400	11.7	Catalytic Routes to Hydro(chloro)fluorocarbons	2426
11.5.4.2.2	Effect of Promoters	2401		<i>Zarah Ainbinder, Leo E. Manzer, and Mario J. Nappa</i>	
11.5.4.2.3	Pd Catalysts: CVOC Oxidation	2401	11.7.1	Background	2426
11.5.5	Metal Oxide Catalysts	2402	11.7.2	Catalytic Transformations	2426
11.5.5.1	Vanadium-Based Catalysts	2402	11.7.2.1	Addition of HF	2426
11.5.5.1.1	V-Based Catalysts: CVOC Oxidation	2402	11.7.2.2	Halogen Exchange	2427
11.5.5.2	Ceria-Based Catalysts	2402	11.7.2.3	Isomerizations	2428
11.5.5.3	Manganese-Based Catalysts	2403	11.7.2.4	Disproportionations/Conproportionations	2429
11.5.5.3.1	Mn-Based Catalysts: CVOC Oxidation	2403	11.7.2.5	HX Elimination Reactions	2430
11.5.5.4	Chromia-Based Catalysts	2404	11.7.2.6	Hydrodehalogenations/Dehydrohalogenations	2430
11.5.5.4.1	Cr-Based Catalysts: CVOC Oxidation	2404			
11.5.5.5	Copper-Based Catalysts	2405			
11.5.5.5.1	Cu-Based Catalysts: CVOC Oxidation	2405			

11.7.2.7	Oxygenates as Reactive Intermediates	2431	11.9.1	Introduction	2447
11.7.2.8	Coupling	2431	11.9.2	Conversion of Biomass to Biobased Products	2447
11.7.2.9	Chlorinations/Chlorofluorinations	2431	11.9.2.1	Strategy for Biomass Conversion to Chemicals	2447
11.7.3	CFC Destruction	2432	11.9.2.2	Catalytic Conversion of Terpenes	2448
11.7.4	Purification Techniques	2432	11.9.2.3	Catalytic Conversion of Triglycerides	2449
11.7.5	Opportunities for the Future	2432	11.9.2.3.1	Catalytic Conversion of Triglycerides to Surfactants	2449
11.7.6	Conclusions	2433	11.9.2.3.2	Catalytic Conversion of Triglycerides to Lubricants	2451
	References	2433	11.9.2.3.3	Catalytic Conversion of Triglycerides to Polymers	2451
11.8	Heterogeneous Catalysis in the Troposphere	2434	11.9.2.3.4	Hydrogenation of Fatty Acids Esters	2451
	<i>Valentin M. Parmon</i>		11.9.2.4	Catalytic Conversion of Glycerol	2451
11.8.1	Introduction	2434	11.9.2.4.1	Conversion of Glycerol to Oxidized Compounds	2452
11.8.2	The Atmosphere as a Global Catalytic and Photocatalytic Reactor	2435	11.9.2.4.2	Conversion of Glycerol to Polyglycerols and Derivatives	2452
11.8.3	Thermal Heterogeneous Catalytic Processes over Ice Particles, and Liquid and Solid Aerosols	2437	11.9.2.4.3	Hydrogenolysis of Glycerol to 1,2- and 1,3-Propanediol	2453
11.8.3.1	Hydrolytic Reactions	2437	11.9.2.5	Catalytic Conversion of Carbohydrates	2453
11.8.3.2	Redox Reactions	2438	11.9.2.5.1	Hydrogenation and Hydrogenolysis of Carbohydrates	2453
11.8.3.3	Acid-Catalyzed Reactions of Organic Compounds over Aerosols	2438	11.9.2.5.2	Catalytic Oxidation of Carbohydrates	2455
11.8.4	Heterogeneous Photocatalytic Reactions in the Troposphere	2438	11.9.2.5.3	Cascade Catalysis and Multistep, One-Pot Conversion	2457
11.8.4.1	Role of Heterogeneous Photocatalytic Processes in the Global Chemistry of the Atmosphere	2440	11.9.2.6	Catalytic Conversion of Carbohydrate Derivatives	2457
11.8.4.2	Experimental Data on Photocatalytic Reactions of Atmospheric Components	2441	11.9.2.6.1	Furan Derivatives	2457
11.8.4.2.1	Photocatalytic Reactions of the Main Atmospheric Components over Semiconductor Oxides	2441	11.9.2.6.2	Conversion of Platform Molecules Produced by Fermentation	2458
11.8.4.2.2	Photocatalytic Reactions of Trace Components of the Atmosphere over Semiconductor Oxides	2442	11.9.2.7	Catalytic Conversion of Lignocellulosic Materials	2459
11.8.4.2.3	Photocatalysis over Compounds with Wide Band Gaps	2442	11.9.2.8	Concluding Remarks	2459
11.8.4.2.4	Photocatalysis by Dissolved Transition Metal Ions	2443	11.9.3	Conversion of Biomass to Heating and Transportation Fuels	2459
11.8.4.2.5	Photogenerated Catalysis	2443	11.9.3.1	Conversion of Vegetable Oils	2460
11.8.4.2.6	Destructive Photoadsorption by Alkaline Earth Oxides	2443	11.9.3.1.1	Transesterification to Biodiesel	2460
11.8.5	Role of Thermal Absorption and Adsorption in Tropospheric Catalysis and Photocatalysis	2444	11.9.3.1.2	Cracking and Steam Reforming of Vegetable Oils	2461
11.8.6	Conclusions	2445	11.9.3.2	Biochemical/Biological Conversion of Biomass	2462
	References	2446	11.9.3.2.1	Anaerobic Digestion	2462
11.9	Conversion of Biomass on Solid Catalysts	2447	11.9.3.2.2	Fermentation and Hydrolysis	2462

Handbook of Heterogeneous Catalysis

8 Volumes

Volume 6

*Edited by
Gerhard Ertl, Helmut Knözinger, Ferdi Schüth,
and Jens Weitkamp*

Second, Completely Revised and Enlarged Edition

WILEY-
VCH

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

	Volume 6		
	Preface	V	
	List of Contributors	XVII	
13	Energy-Related Catalysis	2677	
13.1	Perspectives in Oil Refining	2677	
	<i>Patrick Sarrazin, Colin Baudouin, and Germain Martino</i>		
13.1.1	Introduction	2677	
13.1.1.1	Goals in Oil Refining	2677	
13.1.1.2	Scope of this Chapter	2677	
13.1.2	Oil Refining Today	2677	
13.1.2.1	Crude Oil Production and Market Localization	2677	
13.1.2.2	Product Quantities and Qualities	2679	
13.1.2.3	Refineries	2679	
13.1.2.4	Processes and Catalysts	2681	
13.1.3	Future Refining Needs	2683	
13.1.3.1	Driving Forces	2683	
13.1.3.1.1	Issues Associated with Crude Supply	2683	
13.1.3.1.2	Issues Linked with Product Demand	2683	
13.1.3.1.3	Refinery Emissions	2685	
13.1.3.2	Future Refining	2685	
13.1.3.2.1	Conversion	2685	
13.1.3.2.2	Gasoline Manufacture	2686	
13.1.3.2.3	Clean Diesel Oil Production	2689	
13.1.3.2.4	Refinery Emissions Control	2692	
13.1.3.2.5	Catalyst Disposal	2692	
13.1.4	Conclusions	2693	
13.1.4.1	Future Trends in Refining	2693	
13.1.4.2	Future Trends in Catalysis	2694	
	References	2694	
13.2	Hydrotreating	2695	
	<i>Roel Prins</i>		
13.2.1	Introduction	2695	
13.2.2	Reaction Mechanisms	2696	
13.2.2.1	Hydrodesulfurization	2696	
13.2.2.2	Hydrodenitrogenation	2698	
13.2.2.3	Hydrodeoxygenation	2700	
13.2.2.4	Hydrodechlorination	2700	
13.2.2.5	Hydrotreating of Mixtures	2701	
13.2.2.6	The C–X Bond Breaking Mechanism	2702	
13.2.3	Catalyst Structure	2703	
13.2.3.1	Structure of the Oxidic Catalyst Precursor	2703	
13.2.3.2	Structure of the Sulfidic Catalyst	2704	
13.2.3.2.1	Structure of Mo	2704	
13.2.3.2.2	Structure of the Promoter	2705	
13.2.3.2.3	Surface Sites	2707	
13.2.3.2.4	Modifiers	2708	
13.2.4	Structure–Reactivity Relations	2709	
13.2.5	Hydrotreating Technology	2710	
13.2.5.1	Catalysts	2710	
13.2.5.2	Reactor Systems	2711	
13.2.5.3	FCC Naphtha Hydrotreating	2711	
13.2.5.3.1	Direct Hydrotreating	2711	
13.2.5.3.2	Pre- or Post-octane Upgrading	2714	
13.2.5.4	Diesel Hydrotreating	2714	
13.2.5.5	Other Desulfurization Technologies	2715	
13.2.6	The Future of Hydrotreating	2715	
	References	2716	
13.3	Hydrodemetalation	2718	
	<i>James Wei</i>		
13.3.1	Introduction	2718	
13.3.2	Metal Compounds in Petroleum	2719	
13.3.3	Residue Hydrotreating Technology	2720	
13.3.4	Reaction Kinetics and Diffusion in Catalytic Hydrodemetalation	2721	
13.3.4.1	Model Compound Kinetic Studies	2722	
13.3.4.2	Model Compound Diffusion	2723	
13.3.4.3	Intraparticle Metal Deposition Profiles	2724	

13.3.4.4	Hydrodemetalation of Petroleum Oils and Residua	2724	13.5.3.4.3	Metals: Ni, V, Na and Fe	2750
13.3.5	Catalyst Deactivation	2725	13.5.3.4.4	Sulfur	2753
13.3.6	Conclusions	2727	13.5.3.4.5	Nitrogen	2753
	References	2727	13.5.4	The Chemistry of Catalytic Cracking	2753
13.4	Catalytic Reforming	2728	13.5.4.1	Carbocations	2754
	<i>Mark D. Moser and Paula L. Bogdan</i>		13.5.4.2	Formation of Carbocations	2755
13.4.1	Introduction	2728	13.5.4.3	Isomerization Reactions	2755
13.4.2	The Chemistry of Reforming	2730	13.5.4.4	Carbon–Carbon Bond Breaking by Beta-Scission	2756
13.4.2.1	Feed Composition and Characteristics	2730	13.5.4.5	Hydride Transfer (also Referred to as Hydrogen Transfer)	2756
13.4.2.2	Reforming Products	2730	13.5.4.6	Heteroatom Chemistry: Sulfur	2758
13.4.2.3	Reforming Reactions	2731	13.5.5	FCC Catalysts	2758
13.4.3	Reforming Catalysts	2733	13.5.5.1	Description and Formulation	2758
13.4.3.1	General Aspects	2733	13.5.5.2	Zeolite Component	2759
13.4.3.2	Catalyst Regeneration	2735	13.5.5.2.1	Zeolite Modifications	2759
13.4.4	Reforming Processes	2735	13.5.5.2.2	Zeolite Activity and Selectivity Effects	2760
13.4.4.1	Process Variables	2735	13.5.5.3	Matrix	2762
13.4.4.2	Commercial Catalysts	2736	13.5.5.3.1	Commercial Matrices	2763
13.4.4.3	Modeling/Optimization of Commercial Reforming Units	2737	13.5.5.3.2	Effect of Matrix on Selectivity	2764
13.4.4.4	Process Flow Schemes	2738	13.5.5.4	Characterization	2765
13.4.4.5	Future Developments	2740	13.5.5.5	ZSM-5 Additives	2766
	References	2740	13.5.6	FCCU Environmental Emissions Controls	2766
13.5	Fluid Catalytic Cracking	2741	13.5.6.1	Overview – Catalyst Versus Hardware	2766
	<i>Wu-Cheng Cheng, E. Thomas Habib Jr., Kuppaswamy Rajagopalan, Terry G. Roberie, Richard F. Wormsbecher, and Michael S. Ziebarth</i>		13.5.6.2	Particulates	2768
13.5.1	Introduction and Overview	2741	13.5.6.3	Carbon Monoxide (CO)	2769
13.5.1.1	History	2741	13.5.6.4	Sulfur Oxides (SO _x)	2769
13.5.1.2	FCC Today	2742	13.5.6.5	Nitrogen Oxides (NO _x)	2770
13.5.1.3	Position in a Modern Petroleum Refinery	2743	13.5.7	Laboratory Evaluations and Pilot Plant Testing	2770
13.5.1.4	Environmental Issues	2744	13.5.7.1	Accelerated Aging of Catalysts	2770
13.5.2	FCC Unit Hardware and Operations	2745	13.5.7.2	Simulation of Metals Poisoning	2771
13.5.2.1	Unit Types	2745	13.5.7.3	Reactor Types – Fixed Bed vs. Fluid Bed vs. Transport Phase	2772
13.5.2.2	Heat Balance	2745	13.5.7.4	Temperature Profile and Isothermal vs. Adiabatic Testing	2773
13.5.2.3	Modes of Operation	2745	13.5.8	Summary and Future Trends in Catalytic Cracking	2773
13.5.2.3.1	Regeneration Mode – Partial Burn vs. Full Burn	2745		References	2775
13.5.2.3.2	Resid Processing	2746	13.6	Hydrocracking and Catalytic Dewaxing	2778
13.5.2.3.3	Petrochemical Mode (Light Olefins)	2746		<i>J. A. Rob van Veen, Johannes K. Minderhoud, Laurent G. Huve, and Wim H. J. Stork</i>	
13.5.3	FCC Feeds	2746	13.6.1	Introduction	2778
13.5.3.1	Sources and Trends	2746	13.6.2	Hydrocracking	2779
13.5.3.2	Molecular Types	2746	13.6.2.1	Processes and Process Configurations	2779
13.5.3.3	Characterization	2747	13.6.2.1.1	Two-Stage Hydrocracking	2779
13.5.3.4	Effects on FCC Unit Operation	2750	13.6.2.1.2	Single-Stage Hydrocracking	2780
13.5.3.4.1	Conradson Carbon and Feed Heaviness	2750			
13.5.3.4.2	Feedstock Composition	2750			

13.6.2.1.3	Alternative Process Schemes	2781	13.7.5.1	Octane Numbers and Thermodynamic Equilibrium Concentrations of Isomeric Pentanes and Hexanes	2818
13.6.2.1.4	Mild Hydrocracking	2782	13.7.5.2	Processes for Isomerization of Pentanes and Hexanes	2819
13.6.2.1.5	Reactor Design Aspects	2782	13.7.5.2.1	Processes Using Aluminum Chloride/ Hydrochloric Acid as Monofunctional Catalyst	2819

Handbook of Heterogeneous Catalysis

8 Volumes

Volume 7

*Edited by
Gerhard Ertl, Helmut Knözinger, Ferdi Schüth,
and Jens Weitkamp*

Second, Completely Revised and Enlarged Edition

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

	Volume 7	
	Preface V	
	List of Contributors XXI	
14	Organic Reactions 3123	
14.1	Aromatization of Light Alkanes 3123 <i>Cyril T. O'Connor</i>	
14.1.1	Introduction 3123	
14.1.2	Thermodynamics of Alkane Aromatization 3123	
14.1.3	Catalysts 3124	
14.1.3.1	Ga/HZSM-5 3124	
14.1.3.2	Pt/KL 3127	
14.1.3.3	Other Catalysts for Alkane Aromatization 3128	
14.1.4	Aromatization of Alkanes in the Range C ₃ –C ₈ 3128	
14.1.4.1	Aromatization of Propane 3129	
14.1.4.2	Aromatization of Ethane 3129	
14.1.4.3	Aromatization of Butane 3129	
14.1.4.4	Aromatization of Hexane 3130	
14.1.4.5	Aromatization of Pentanes, Heptanes and Octanes 3130	
14.1.5	Commercial Applications of Aromatization of Light Alkanes 3131	
14.1.6	Conclusion 3132 References 3132	
14.2	Ring Opening of Aromatics 3133 <i>Jens Weitkamp</i>	
14.2.1	Introduction 3133	
14.2.2	Fundamentals of Hydrodecyclization of Cycloalkanes 3134	
14.2.2.1	Hydrogenolysis on Metals 3135	
14.2.2.2	Hydrocracking on Bifunctional Catalysts 3135	
14.2.2.3	Cracking and Activation of Hydrogen on Monofunctional Acidic Catalysts 3138	
14.2.3	Ring Opening of Aromatics in Diesel and Jet Fuels 3140	
14.2.3.1	Bifunctional Catalysts 3141	
14.2.3.2	Metal Catalysts 3143	
14.2.3.3	Acid Catalysts 3146	
14.2.4	Ring Opening of Aromatics in Gasoline Without Degradation of the Carbon Number 3146	
14.2.5	Ring Opening of Aromatics in Pyrolysis Gasoline Followed by Hydrocracking into a Synthetic Steam-Cracker Feed 3146	
14.2.5.1	Hydrodecyclization and Hydrocracking of Cycloalkanes on Acid Zeolites 3147	
14.2.5.2	Direct Ring Opening of Aromatics on Bifunctional Zeolites 3149	
14.2.6	Conclusions 3150 References 3151	
14.3	Alkylation of Aromatics 3153 <i>Michael C. Clark, C. Morris Smith, David L. Stern, and Jeffrey S. Beck</i>	
14.3.1	Introduction 3153	
14.3.2	Alkylation of Benzenes, Phenols and Anilines 3154	
14.3.2.1	Acid-Catalyzed Synthesis of Alkylbenzenes 3154	
14.3.2.1.1	General Aspects 3154	
14.3.2.1.2	Commercial Processes 3156	
14.3.2.2	Base-Catalyzed Synthesis of Alkylbenzenes 3161	
14.3.2.2.1	General Aspects 3161	
14.3.2.2.2	Synthesis of Styrene from Toluene with Methanol 3162	
14.3.2.2.3	Isobutylbenzene 3162	
14.3.2.2.4	<i>tert</i> -Amylbenzene 3162	
14.3.2.2.5	Butenylation of Alkylaromatics 3162	
14.3.2.3	Alkylphenols 3163	
14.3.2.3.1	Methylphenols 3163	

14.3.2.3.2	Higher Alkylphenols	3163	14.4.6.3	Ethylbenzene and Cumene Transalkylation Processes	3183
14.3.2.4	Alkylanilines	3163	14.4.7	<i>p</i> -Diethylbenzene	3184
14.3.3	Alkylation of Binuclear Aromatics	3164	14.4.8	Diisopropylbenzene	3184
14.3.3.1	Alkylation of Naphthalene	3164	14.4.9	Mechanisms of Aromatic Transformations	3184
14.3.3.2	Alkylation of Biphenyl	3165	14.4.9.1	Relative Reactivity of Alkylaromatics	3184
14.3.4	Conclusions	3166	14.4.9.2	Initiation of Alkylaromatic Conversion Chemistry	3185
	References	3166	14.4.9.3	Unimolecular Aromatic Conversion Chemistry	3185
14.4	Isomerization and Transalkylation of Alkylaromatics	3168	14.4.9.4	Bimolecular Aromatic Conversion Chemistry	3186
	<i>David L. Stern, Stephen H. Brown, and Jeffrey S. Beck</i>		14.4.10	Process Implications of Alkylaromatic Transformation Mechanisms	3187
14.4.1	Introduction	3168	14.4.10.1	Xylene Isomerization	3187
14.4.2	Catalysts	3169	14.4.10.2	Conversion of Ethylbenzene to Xylenes	3188
14.4.2.1	Catalyst Acid Strength	3169	14.4.10.3	Methylaromatic Transalkylation	3188
14.4.2.2	Catalyst Structure	3170	14.4.10.4	Ethylbenzene Disproportionation to Diethylbenzene	3188
14.4.2.3	Shape Selectivity and Diffusional Restriction	3171	14.4.10.5	Methylnaphthalene and Dimethylnaphthalene Isomerization and Transalkylation	3189
14.4.3	Xylenes	3172	14.4.11	Olefin Reactivity and Coking in Transformations of Alkylaromatics	3189
14.4.3.1	Aromatic Feedstocks and Reformate Separations	3172	14.4.11.1	Light and Heavy Product Distributions in Selective Toluene Disproportionation (STDP)	3190
14.4.3.2	Xylene Separations	3173	14.4.11.2	Byproduct Formation in Ethylbenzene and Cumene Transalkylation	3191
14.4.3.3	Toluene Conversion to Benzene	3174	14.4.11.3	Catalyst Coking	3191
14.4.4	Xylene Isomerization	3174	14.4.12	Conclusions	3192
14.4.4.1	Fundamentals of Xylene Isomerization	3174		References	3192
14.4.4.2	Ethylbenzene Conversion in Xylene Isomerization Processes	3175	14.5	Non-Oxidative Activation of Alkanes	3194
14.4.4.3	Ethylbenzene Hydrocracking Processes in Xylene Isomerization	3175		<i>Yvonne Traa</i>	
14.4.4.4	Ethylbenzene Hydroisomerization Processes in Xylene Isomerization	3177	14.5.1	Introduction	3194
14.4.4.5	Ethylbenzene Disproportionation Processes in Xylene Isomerization	3177	14.5.2	Thermodynamic Aspects	3196
14.4.5	Methylaromatics Transalkylation	3177	14.5.3	Activation of Methane	3196
14.4.5.1	Fundamental Aspects of Methylaromatics Transalkylation	3177	14.5.3.1	Catalytic Decomposition of Methane to Hydrogen and Carbon	3198
14.4.5.2	Methylaromatics Transalkylation Catalysts and Process Chemistry	3178	14.5.3.2	Conversion of Methane to Ethane and other Aliphatics	3198
14.4.5.3	Methylaromatics Transalkylation Processes	3178	14.5.3.3	Aromatization of Methane	3200
14.4.5.4	Selective Toluene Disproportionation (STDP)	3179	14.5.3.3.1	The Catalyst	3200
14.4.5.4.1	Shape Selectivity in STDP	3179	14.5.3.3.2	The Carbonaceous Deposits and Mechanistic Considerations	3200
14.4.5.4.2	Selective Toluene Disproportionation Processes	3181	14.5.3.3.3	Influence of Co-Reactants	3201
14.4.6	Ethylbenzene and Cumene Transalkylation	3182	14.5.3.4	Co-Conversion of Methane with Alkenes	3201
14.4.6.1	Catalysts for Ethylbenzene and Cumene Transalkylation	3182			
14.4.6.2	Feeds and Products of Ethylbenzene and Cumene Transalkylation	3183			

14.5.4	Alkylation of Aromatics with Alkanes	3202	14.6.5.1.2	Carrying Out the Reaction in a Heated Reactor	3219
14.5.4.1	Propane as Alkylating Agent	3203	14.6.5.1.3	Preheating the Catalyst and Carrying Out the Reaction in an Adiabatic Reactor	3219
14.5.4.2	Ethane as Alkylating Agent	3204	14.6.5.2	Regeneration	3219
14.5.4.3	Methane as Alkylating Agent?	3204	14.6.5.2.1	Continuous Systems	3220
14.5.5	Other Reactions of Light Alkanes	3204	14.6.5.2.2	Discontinuous Systems	3220
14.5.6	Conclusions	3205	14.6.6	Commercial Processes	3221
	References	3205	14.6.6.1	UOP Oleflex Process	3221
14.6	Dehydrogenation of Alkanes	3206	14.6.6.2	Uhde STAR Process	3221
	<i>Karl Josef Caspary, Helmut Gehrke, Max Heinritz-Adrian, and Meinhard Schwefer</i>		14.6.6.3	ABB Lummus CATOFIN Process	3223
14.6.1	Introduction	3206	14.6.6.4	Linde PDH Process	3224
14.6.1.1	Importance of Light Alkenes	3206	14.6.6.5	Snamprogetti-Yarsintez FBD Process	3224
14.6.1.2	Historical Developments	3207	14.6.7	Dehydrogenation of Other Alkanes	3225
14.6.2	Conceptual Approach	3207	14.6.7.1	Dehydrogenation of Heavy <i>n</i> -Alkanes	3225
14.6.2.1	Influence of Temperature on the Equilibrium	3207	14.6.7.2	Dehydrogenation of Cyclohexane	3225
14.6.2.2	Influence of Partial Pressure on the Equilibrium	3208	14.6.8	Future Developments	3226
14.6.2.3	Energy of Alkane Dehydrogenation	3209	14.6.8.1	Membrane Technology	3226
14.6.2.4	Formation of By-Products	3209	14.6.8.2	CO ₂ as a Diluent	3226

14.15.3	Practical Applications of Elimination and Addition Reactions	3600	14.16.2.4	Survey of Anchored Complexes	3630
14.15.3.1	Dehydrochlorination	3600	14.16.2.4.1	Heterogenization via Covalently Bound Ligands	3630
14.15.3.1.1	Vinyl Chloride Production	3600	14.16.2.4.2	Heterogenization via Adsorption and Ion Pair Formation	3632
14.15.3.1.2	Trichloroethene and Tetrachloroethene Production	3600	14.16.2.4.3	Heterogenization via Entrapment	3634
14.15.3.1.3	Production of Linear Alkenes	3600	14.16.2.5	Assessment and Conclusions	3635
14.15.3.2	Dehydration	3601		References	3636
14.15.3.3	Hydrochlorination	3601	14.16.3	Diastereoselective Catalysis	3637
14.15.3.4	Hydration and Amination	3601		<i>Michele Besson and Catherine Pinel</i>	
14.15.3.4.1	Formation of Ethanol	3601	14.16.3.1	Introduction	3637
14.15.3.4.2	Formation of 2-Propanol	3601	14.16.3.2	Diastereoselective Hydrogenation of C=C Bonds	3637
14.15.3.5	Addition of Alcohols and Organic Acids to Alkenes	3602	14.16.3.2.1	Synthesis of Amino Acid Derivatives	3637
14.15.3.5.1	Isopropyl Acetate	3602	14.16.3.2.2	Synthesis of Building Blocks	3641
14.15.3.5.2	Methyl <i>tert</i> -Butyl Ether	3602	14.16.3.3	Diastereoselective Hydrogenation of C=O Bonds	3646
14.15.3.6	Alkylation and Dealkylation	3602	14.16.3.4	Diastereoselective Hydrogenation of C=N Bonds	3648
	References	3602	14.16.3.4.1	Hydrogenation of Imines	3648
14.16	Stereoselective Reactions	3603	14.16.3.4.2	Hydrogenation of Oximes and Hydrazones	3650
14.16.1	Chiral Surfaces and Enantioselective Catalysis	3603	14.16.3.5	Diastereoselective Hydrogenation of Aromatic Rings	3650
	<i>Tamas Mallat, Simon Diezi, and Alfons Baiker</i>		14.16.3.6	Diastereoselective Hydrogenation of Nitrogen-Containing Rings	3654
14.16.1.1	Introduction	3603	14.16.3.6.1	Pyridine Derivatives	3654
14.16.1.2	Approaches to Induce Enantioselectivity at Surfaces	3604	14.16.3.6.2	Pyrazine Derivatives	3656
14.16.1.2.1	Intrinsically Chiral Surfaces	3604	14.16.3.6.3	Pyrrole Derivatives	3658
14.16.1.2.2	Preparation of a Chiral Solid in the Presence of a Chiral Auxiliary	3604	14.16.3.6.4	Furan and Benzofuran Derivatives	3659
14.16.1.2.3	Metal on a Chiral Support	3604	14.16.3.7	<i>In-Situ</i> Diastereoselective Hydrogenation	3659
14.16.1.2.4	Chirally Modified Surfaces	3605	14.16.3.8	Conclusions	3660
14.16.1.2.5	Chiral Reconstruction of an Achiral Surface	3605		References	3661
14.16.1.3	Chirally Modified Metals: Application Range and Mechanism	3606			
14.16.1.3.1	Platinum	3606			
14.16.1.3.2	Palladium	3615			
14.16.1.3.3	Iridium, Rhodium, and Ruthenium	3618			
14.16.1.3.4	Nickel	3619			
14.16.1.4	Summary and Outlook	3622			
	References	3622			

14.17	Miscellaneous Catalytic Systems	3663	14.17.3.2.1	Adsorption	3700
14.17.1	Hydroformylation on Solid Catalysts	3663	14.17.3.2.2	Ion Pair Formation	3701
	<i>Vladimir A. Likholobov and Boris L. Moroz</i>		14.17.3.2.3	Physical Entrapment	3701
14.17.1.1	Fundamental Principles of Hydroformylation	3663	14.17.3.2.4	Covalent Binding	3701
14.17.1.1.1	General Features and Scope	3663	14.17.3.2.5	Framework Substitution	3701
14.17.1.1.2	Homogeneous Oxo Catalysts and Process Parameters	3664	14.17.3.3	General Considerations	3702
14.17.1.1.3	Reaction Mechanism	3668	14.17.3.3.1	Oxidants	3702
14.17.1.2	Types of Solid Oxo Catalyst	3669	14.17.3.3.2	Metal Catalysts	3702
14.17.1.3	Hydroformylation with Immobilized Metal Complex Catalysts	3669	14.17.3.3.3	Catalyst Supports	3703
14.17.1.3.1	Supported Metal Complex Catalysts	3669	14.17.3.3.4	Leaching	3703
14.17.1.3.2	Supported Metal Complex Catalysts	3671	14.17.3.4	Selected Examples	3704
14.17.1.4	Hydroformylation over Supported Metal Catalysts	3680	14.17.3.4.1	Titanium	3704
	References	3682	14.17.3.4.2	Manganese and Iron	3704
			14.17.3.4.3	Cobalt	3707
14.17.2	Wacker Chemistry with Solid Catalysts	3684	14.17.3.4.4	Copper	3709

Handbook of Heterogeneous Catalysis

8 Volumes

Volume 8

*Edited by
Gerhard Ertl, Helmut Knözinger, Ferdi Schüth,
and Jens Weitkamp*

Second, Completely Revised and Enlarged Edition

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

Volume 8	
Preface	V
List of Contributors	XI
15	Polymerization Reactions 3733
15.1	Review of the Phillips Chromium Catalyst for Ethylene Polymerization 3733 <i>Max P. McDaniel</i>
15.1.1	Historical and Commercial Background 3733
15.1.2	Catalyst Formation 3734
15.1.3	Polymerization Mechanism 3737
15.1.3.1	Active Valence 3737
15.1.3.2	Polymerization Mechanism 3739
15.1.4	Active Site Population 3743
15.1.4.1	Site Heterogeneity 3743
15.1.4.2	Activation Temperature 3744
15.1.4.3	Active Site Density 3745
15.1.5	Branching 3747
15.1.5.1	Short Chain Branching 3747
15.1.5.2	Long Chain Branching 3749
15.1.6	The Porosity of the Support 3750
15.1.6.1	Porosity and Activity 3750
15.1.6.2	Porosity and Molecular Weight 3754
15.1.6.3	Porosity and Branching 3755
15.1.7	Modifications of Cr/Silica 3757
15.1.7.1	Promotion by Titania 3757
15.1.7.2	"Two-Step" Activation of Cr/ Silica–Titania 3761
15.1.7.3	Dehydration by Chemical Means 3762
15.1.7.4	Activation by Reduction/Reoxidation 3763
15.1.7.5	Fluoride 3765
15.1.7.6	Treatment with Alkali Metals 3766
15.1.7.7	CO Reduction 3768
15.1.7.8	Magnesia 3768
15.1.8	Chromium Oxide on Alumina and Aluminophosphates 3768
15.1.8.1	Cr/Alumina 3768
15.1.8.2	Cr/Aluminophosphate 3770
15.1.9	Metal Alkyl Co-Catalysts 3774
15.1.9.1	Action of Co-Catalysts 3774
15.1.9.2	Kinetic Profile 3775
15.1.9.3	MW Distribution 3776
15.1.9.4	<i>In Situ</i> Olefin Generation 3777
15.1.10	Conclusion 3781
15.1.11	Glossary 3782
	References 3783
15.2	Polymerization on Molecular Catalysts 3792 <i>Gerhard Fink</i>
15.2.1	Introduction 3792
15.2.2	History and Evolution of (Heterogeneous) Ziegler–Natta Catalysts 3793
15.2.2.1	First-Generation Catalysts 3793
15.2.2.2	Second-Generation Catalyst 3793
15.2.2.3	Third-Generation MgCl ₂ -Supported Catalysts 3794
15.2.2.4	Fourth- and Fifth-Generation Catalysts 3795
15.2.2.5	Metallocenes – Sixth-Generation Catalysts 3797
15.2.3	Polymer Reaction Engineering 3797
15.2.3.1	Production of Polyethylene 3797
15.2.3.1.1	Suspension Polymerization Process 3797
15.2.3.1.2	Phillips Particle Form Process 3798
15.2.3.1.3	Gas-Phase Fluidized-Bed Process 3798
15.2.3.2	Propylene Polymerization 3799
15.2.3.2.1	Basell Spheripol Process 3799
15.2.3.2.2	BASF Novolen Process 3799
15.2.3.2.3	Unipol–Shell Fluid Bed Process 3800
15.2.3.2.4	Multizone Circulating Reactor (MZCR) 3801
15.2.4	Mechanisms of Ziegler–Natta Catalysis and Polymerization 3801
15.2.4.1	Fundamental Considerations 3801

15.2.4.2	Early Soluble Unbridged Metallocene Catalysts in Connection with Alkylaluminum Chlorides	3803	16.3	Reactors for Immobilized Biocatalysts	3838
15.2.4.2.1	Unbridged Metallocene Catalysts in Connection with Methylaluminoxane	3805	16.4	Application of Immobilized Biocatalysts	3840
15.2.4.3	Stereorigid Bridged Chiral Metallocene Catalysts in Connection with MAO or Other Activators	3806	16.4.1	Industrial Application of Immobilized Biocatalysts	3840
15.2.4.4	Mechanism of Stereochemical Control	3812	16.4.1.1	Production of 7-Aminocephalosporanic Acid and 6-Aminopenicillanic Acid	3840
15.2.5	Supported Metallocene/MAO Catalysts and Other Heterogenized Catalysts	3815	16.4.1.2	Production of L-Amino Acids Using Aminoacylase	3845
15.2.5.1	Silica Gel as Supporting Material	3816	16.4.1.3	Several Selected Processes that Use Lipase in Manufacturing Fine Chemicals	3846
15.2.5.2	Supporting Methods and Procedures	3817	16.4.1.4	Production of Acrylamide by Means of Nitrile Hydratase	3850
15.2.5.3	Further Supporting Materials and Procedures	3818	16.4.1.5	Production of High-Fructose Corn Syrup Using Xylose Isomerase	3852
15.2.5.3.1	Polystyrene	3818	16.4.1.6	Production of Lactose-Free Milk Using β -Galactosidase	3854
15.2.5.3.2	Hybrid Multicomponent Catalyst Systems	3818	16.4.1.7	Production of L-Malic Acid Using Fumarase	3854
15.2.5.3.3	Self-Immobilization	3819	16.4.1.8	Production of Glycerol-3-Phosphate Using Glycerol Kinase	3856
15.2.5.4	Polymerization Kinetics and Polymer Particle Growth	3820	16.4.1.9	Miscellaneous Industrial Processes Using Immobilized Enzymes	3857
15.2.5.5	Mathematical Modeling and Fragmentation Processes	3822	16.4.2	Analytical and Medical Applications	3857
15.2.5.6	Video Microscopy	3824	16.4.3	Waste Treatment	3858
15.2.6	Outlook – Future Trends	3825	16.4.4	Application of Whole Cells (Not Immobilized) in Industrial Biotransformation Process	3859
	References	3827	16.4.4.1	Production of Epoxides Using Monooxygenase	3859
16	Reactions on Immobilized Biocatalysts	3831	16.4.4.2	Production of Malic Acid Using Fumarase	3859
	<i>Annett Horn,</i>		16.5	Conclusion and Outlook	3860
	<i>Shefali Kumar, Andreas Liese, and Udo Kragl</i>			References	3862
16.1	Introduction	3831		Index	3867
16.1.1	A Short History of Biotransformations	3831			
16.1.2	Need for Immobilization	3833			
16.2	Characterization of Immobilized Biocatalysts	3833
