

**Business Models for Renewable Energy: Determinants of Financial
Performance and Investment Decisions**

DISSERTATION
of the University of St. Gallen,
Graduate School of Business Administration,
Economics, Law and Social Sciences (HSG)
to obtain the title of
Doctor Oeconomiae

submitted by

Moritz Loock

from

Germany

Approved on the application of

Prof. Dr. Rolf Wüstenhagen

and

Prof. Dr. Marcus Schögel

Dissertation no. 3833

ADAG COPY AG, Zürich 2010

C. Table of Contents

A. Abstract.....	II
B. Zusammenfassung.....	III
C. Table of Contents.....	IV
D. List of Figures.....	VI
E. List of Tables.....	VII
1. Introduction.....	1
1.1. Problem statement.....	1
1.2. Frame of reference: a generic map of generic business models for renewable energy.....	4
1.3. Research questions and objectives of the single papers.....	9
1.4. Guiding propositions throughout the research project.....	10
1.5. Research philosophy perspective and research process.....	13
1.6. Intended contribution to practice and theory.....	16
1.7. Thesis structure.....	18
1.8. References.....	20
2. <i>First Paper:</i> How do Business Models Impact Financial Performance of Renewable Energy Firms?.....	23
2.1. Abstract.....	23
2.2. Problem and research question.....	24
2.3. Theory.....	26
2.4. Method.....	34
2.5. Results.....	38
2.6. Discussion and implications for practice and research.....	42
2.7. References.....	46
3. <i>Second Paper:</i> Going Beyond Best Technology and Lowest Price: Renewable Energy Investors' Preference for Service-Driven Business Models	50
3.1. Abstract.....	50
3.2. Introduction and problem and research question	51
3.3. Theory.....	53
3.4. Sample.....	55
3.5. Method.....	58

3.6.	Results.....	61
3.7.	Discussion and implications for practice and research.....	66
3.8.	References.....	68
4.	<i>Third Paper:</i>	
	Debt for Brands: Tracking Down a Bias in Project Financing.....	71
4.1.	Abstract.....	71
4.2.	Introduction.....	72
4.3.	Problem and research question.....	73
4.4.	Theory.....	74
4.5.	Method.....	83
4.6.	Results.....	86
4.7.	Discussion and implications for practice and research.....	92
4.8.	References.....	95
5.	Conclusion and Discussion.....	101
5.1.	Main findings.....	101
5.2.	Implications for practice.....	103
5.3.	Limitations and implications for further research.....	106
5.4.	Research outlook.....	110
5.5.	References.....	113
6.	Appendix.....	115
6.1.	List of industry reports for preliminary research.....	115
6.2.	Preliminary explorative research.....	116
6.3.	Conference minutes: EPIA PV Investments 2009	118
6.4.	List of companies considered for paper 1.....	123
6.5.	List of invited investment managers for paper 2.....	127
6.6.	Screenshots of the survey for paper 2.....	132
6.7.	List of invited banks for paper 3.....	147
6.8.	Screenshots of the survey for paper 3.....	149
6.9.	Conferences where the papers have been presented.....	167
7.	Curriculum Vitae.....	168

D. List of Figures

- Figure 1: Clean energy capital requirement per year
- Figure 2: Business model: a mediator between a technology and economic value creation
- Figure 3: Generic map of business models for renewable energy
- Figure 4: Research process for this thesis
- Figure 5: Generic value chain for renewable energy
- Figure 6: Geographical split of renewable energy firms
- Figure 7: Tobin's q mean over time
- Figure 7: Tobin's q mean for renewable energy companies over time
- Figure 8a/b: Differences on business model performance between wind and solar
- Figure 9: Investment managers' investment technology preference
- Figure 10: Investment managers' value chain preference
- Figure 11: Screenshot of online survey with choice experiments
- Figure 12: Alternative visualization of utility values as zero-centered diffs
- Figure 13: Average importance of business model attributes
- Figure 14: Zero-centered diffs (Attribute Levels)
- Figure 15: Average importance of attributes
- Figure 16: Results of simulation 1
- Figure 17: Results of simulation 2 "High DSCR Project" / "Low DSCR Project"
- Figure 18: Results of simulation 3 "Low Risk Project" / "High Risk Project"

E. List of Tables

- Table 1: Code definition for independent variables
- Table 2: Frequencies
- Table 3: Performance of business models for renewable energy
- Table 4: Correlation between Tobin's q and business model characteristics
- Table 5: Correlations between Tobin's q and strength of different business model gestalt-themes
- Table 6: Renewable energy investment managers' investment style
- Table 7: Attributes and levels for the conjoint experiment
- Table 8: Average utility values of business model attribute levels
- Table 9: Simulation of investors' share of preference for different business models
- Table 10: Definition of debt service cover ratio
- Table 11: Prototypical project initiators
- Table 12: PV facility life cycle
- Table 13: Attributes and attribute levels
- Table 14: ACBC analysis – HB summary of results
