TRANSFORMING THE FUTURE
*ETH Zurich and the Construction
of Modern Switzerland 1855–2005*

CHRONOS

CONTENT

Introduction	8
1. A fundamental debate: Anchoring the Swiss vision post-1848	15
Between infrastructural policy and customs regulations	19
Statistical excursions into the educational landscape	22
Hunting for market niches	25
The public policy debate free-for-all	26
The parliamentary debate	29
From Bern to Zurich: nailing it down	33
2. Nation, profession, middle class: Educating nineteenth-century engineers	39
Federal codes of behavior	42
Federal education policy	43
National visibility	45
On being a federal institution	48
A school for the nation	55
Industrial standards	60
Technical training and industrial growth	61
Employment and educational credentials	65
Part university, part manufacturing plant	68
Toward an engineering curriculum	70
The laboratory as “idealized factory”	75
Launching into research	80
Collaborating with industry	84
Cultural norms	87
Climbing the bourgeois career ladder	88
Toeing the line	91
Socialization	94
Gender and the polytechnic	99
3. Setting a new course: The polytechnic becomes a “real” university after 1908	105
The polytechnic in crisis	108
Disentangling	111
Reorganizing the polytechnic	115
An unsuccessful debate over doctorates	118
Acquiring the character of a real university	121
The breakthrough of 1908	125

From the “Polytechnic” to the “Federal Institute of Technology”	126
Societal crisis and institutional change	128
“Noblesse oblige!”	132
4. Business, politics, and research: New alliances for a new century	137
Technology boom and bust	141
Materialism and the decline of the West	141
A technocratic humanism	144
The value of research	149
Meeting the promises	149
The world as a laboratory for agricultural policy	154
The “scientific transformation of the social” in the factory	159
The problem of basic research	164
Matching funds for applied research	169
The limits of the “national system of innovation”	175
State intervention	178
Getting the economy going again: savings and stimulus	179
The ETH as an institute for “Geistige Landesverteidigung”	182
Investing in research for jobs	188
The science policy “arms race” post-1945	191
Dealing with the military	196
Swissness and science	200
Arthur Rohn’s “Jewish problem”	202
Promoting an all-Swiss faculty post-1933	205
The United States as a new center of science	211
International research collaboration	214
5. The social laboratory: Testing the bounds of higher education and politics post-1968	219
“Educational requirements for the industrial world”?	221
Systemic disruption	226
The “student” element	233
The campaign against the ETH law, 1969	237
The revolt of the knowledge workers	244
The end of the experimental phase	248

6. All about flexibility: Managing science and technology in the post-industrial world	255
Ready for anything	258
Flexibility as a prescription	259
The permanence of reform	264
The art of the project-centered approach	267
A new research commission	271
A project-based curriculum?	274
Databases and resources	278
Betting on Internationalization	284
The universals of science	285
Appointments and university policy	288
Deindustrialization and relative backwardness	290
The globalization of science	296
European-American compatibilities	299
Computerization strategies	301
Computers, centers, and interactivity	302
Differentiating services	305
Reintegration and networking	306
The WWW and customized IT	311
Consultants, Restructuring, and Management	315
The Hayek report	316
The creative chaos of the matrix	321
Management everywhere	329
Autonomy as a management mandate	335
The demise of disciplines	339
Summary	351
