Series Preface	xiii	5. Dopamine (DA), a Brain Inhibitor of Reproduction	23
Volume Preface	xv	5.1. Dual Brain Control of Pituitary Gonadotropins (GTHs) in Teleosts	23
Contributors	xvii	5.2. Diversity of Dopamine (DA) Roles in the Control of Teleost Reproduction	24
1. Sex Determination in Fishes	1	5.3. Evolutionary Origin of Dopamine (DA) Inhibitory Control of Reproduction in Teleosts	24
1. Introduction	1	5.4. Modulation of Dopamine (DA) Inhibitory System by Internal Factors	26
2. Sex Determination	2	5.5. Modulation of Dopamine (DA) Inhibitory System by Environmental Cues	26
3. Sexual Differentiation	4	6. Kiss, a New Actor in the Brain's Control of Reproduction	27
3.1. Testicular Differentiation	4	6.1. Discovery of the Indispensable Role of Kiss in the Control of Reproduction in Mammals	27
3.2. Ovarian Differentiation	7	6.2. Investigation of the Kisspeptin (Kp) System in Teleosts	27
4. Environmental Effects on Sex Determination and Differentiation	9	6.3. Origin and Evolution of the Kisspeptin (Kp) System	28
5. Conclusions and Future Directions	10	6.4. The Kisspeptin (Kp) System in Fishes: Missing Link Between Growth/Metabolism and Reproduction	30
Acknowledgements	11	7. Sex Steroids in the Brain of Fishes	31
References	12	7.1. Aromatase Expression and High Sexual Plasticity of the Brain in Fishes	31
2. Conserved and Divergent Features of Reproductive Neuroendocrinology in Teleost Fishes	15	7.2. Classical Positive and Negative Feedbacks	32
1. Introduction	15	7.3. Expression of Other Steroidogenic Enzymes in the Brain of Fishes	34
2. The Unique Hypothalamic–Pituitary–Gonadal (HPG) Axis of Teleosts	16	8. Conclusions and Perspectives	34
3. Gonadotropin-Releasing Hormone (GnRH)	17	References	35
3.1. Discovery of Gonadotropin-releasing Hormone (GnRH) in Teleosts	18	3. Testicular Function and Hormonal Regulation in Fishes	43
3.2. Two or Three Gonadotropin-releasing Hormone (GnRH) Genes in Fishes	19	1. Introduction	43
3.3. Gonadotropin-releasing Hormone (GnRH) Distribution in the Brain of Fishes	19	2. Testis Structure and Spermatogenesis: an Overview	44
3.4. Gonadotropin-releasing Hormone (GnRH)'s Functions are Mediated by Multiple Receptors	21	3. Testicular Hormones	47
3.5. Pulsatile Release of Gonadotropin-releasing Hormone (GnRH) in Fishes?	21	3.1. Steroids	47
4. Other Brain Factors Stimulating GTH Release	22		
4.1. Neuropeptide Y (NPY)	22		
4.2. γ -aminobutyric Acid (GABA)	22		
4.3. Gonadotropin-inhibiting Hormone (GnIH)	23		

3.2. Additional Hormones and Signaling Molecules	48	2.2. Thyroid Hormone (TH) Transporters	87
3.3. Genomic Approaches	48	2.3. Thyroid Hormone (TH) Clearance	87
4. Endocrine Regulation of Testis Structure and Function	49	2.4. Thyroid Hormone (TH) Receptors	87
5. Temporal Aspects of Testicular Function	51	2.4.1. Nuclear triiodothyronine (T ₃) receptors	88
5.1. Development from Undifferentiated Gonad to Functional Testis	51	2.4.2. Plasma membrane thyroxine (T ₄) receptor	88
5.2. Release of Sperm	51	3. The Thyroid Tissue of Fishes	89
5.3. Seasonal Aspects of Testicular Function	51	3.1. Thyroid Hormone (TH) Synthesis and Release	90
6. Accessory Gonadal Structures	52	4. Thyroid Hormone (TH) and Reproduction In Fishes	90
6.1. Testicular Glands and Testicular Blind Pouches	53	4.1. Correlative Studies Examining Changes in Thyroid Hormone (TH) Function During Reproductive Maturation	91
6.2. Seminal Vesicles	53	4.2. Identification of Thyroid Hormone (TH) Regulatory Elements in Gonadal Tissue	92
6.2.1. Seasonal variation	53	4.3. Assessment of Thyroid Function Using Sex Steroid Treatment	93
6.2.2. Steroidogenesis	53	4.4. Manipulation of Thyroid Function to Induce Changes in the Reproductive System	94
6.2.3. Hormonal regulation	53	5. Conclusions	95
6.2.4. Components of seminal vesicle plasma and their functions	54	References	96
6.2.4.1. Ionic concentration, pH, and osmolality	54		
6.2.4.2. Lipids, carbohydrates, and proteins	54		
6.2.4.3. Steroid glucuronides and olfaction	55		
7. Intraspecific Variation in Sperm Characteristics and Testicular Function	55		
8. Conclusions	57		
Acknowledgments	57		
References	58		
4. Regulation of Ovarian Development and Function in Teleosts	65	6. Stress and Reproduction	103
1. Introduction: Fish Models of Reproductive Strategies	65	1. Introduction	103
2. Morphological Aspects of the Teleost Ovary and Stages of Oocyte Development	66	1.1. Effectors of the Stress Response	103
3. Differentiation of Primordial Germ Cells into Oogonia	68	1.2. Effectors of Reproductive Functions	104
4. Oogenesis, Oocyte Growth, and Development	70	2. Effects of Stress on the Hypothalamic–Pituitary–Gonadal (HPG) Axis	105
5. Oocyte Maturation and Ovulation	73	2.1. Effects of Stress on the Central Nervous System (CNS)	105
6. Final Considerations	76	2.2. Effects of Stress at the Level of the Pituitary	106
References	77	2.3. Effects of Stress on Hepatic Vitellogenesis	106
		2.4. Effects of Stress on Gonadal Function	107
		3. Life Stage-Specific Effects of Stress on Reproduction	108
		3.1. Impact of Stress During Embryonic and Larval Stages	108
		3.2. Impacts of Stress on Puberty	109
		3.3. Impacts of Stress on Adults	109
		4. Effects of Sex and Reproduction on the Hypothalamic–Pituitary–Interrenal (HPI) Axis	110
		5. Reproduction and Resistance to Stress	111
		6. Conclusions	112
		References	113
5. Thyroid Hormones and Reproduction in Fishes	83		
1. Introduction	83		
2. Thyroid Hormone Delivery	84		
2.1. Regulation of Circulating Thyroid Hormone (TH) Levels	84		

7. Hormones and Sexual Behavior of Teleost Fishes	119	9. Hormonally Derived Sex Pheromones in Fishes	169
1. Theoretical Constructs: Appetitive and Consummatory Phases	119	1. Introduction	169
2. Patterns of Sexual Behavior	120	2. Hormonal Pheromones in Fishes	170
2.1. Defending and Preparing a Spawning Site	120	2.1. Goldfish and Related Cypriniforms	172
2.2. Finding and Choosing a Mate: Species Identification, Sexual Discrimination, and Mate Choice	122	2.1.1. Female preovulatory steroid pheromone	173
2.3. Internal and External Fertilization	124	2.1.2. Female postovulatory prostaglandin pheromone	174
2.4. Sex-role Reversal	125	2.1.3. The male goldfish pheromone(s)	175
2.5. Alternative Reproductive Tactics	126	2.1.4. Hormonal pheromones in other cypriniforms	176
3. Endocrine Mechanisms Regulating Sexual Behavior	127	2.2. Order Salmoniformes	177
3.1. Gonadal Steroids	127	2.2.1. Genus <i>Salmo</i> : Atlantic salmon and brown trout	177
3.1.1. Gonadal steroids and male sexual behavior	128	2.2.2. Genus <i>Salvelinus</i> (chars)	178
3.1.2. Gonadal steroids and female sexual behavior	131	2.2.3. Genus <i>Oncorhynchus</i> (Pacific salmon)	178
3.2. Neuropeptides	132	2.2.4. Hormonal pheromones and salmonid phylogeny	179
3.2.1. Gonadotropin-releasing hormone (GnRH)	132	2.3. Order Perciformes	179
3.2.2. Arginine-vasotocin (AVT)	133	2.3.1. The Eurasian ruffe (<i>Gymnocephalus cernuus</i>)	179
3.2.3. Isotocin (IST)	134	2.3.2. The black and round gobies	180
3.3. Prostaglandins (PGs)	135	2.3.3. Family Cichlidae	182
4. Brain Circuits Underlying Sexual Behavior in Fishes	135	3. Hormonal Pheromones and the Issue of Species Specificity	184
5. Prospects for Future Research	137	Acknowledgements	188
5.1. <i>In-vivo</i> Imaging of Brain Activity	137	References	188
5.2. Molecular Biology	137		
5.3. Genetics	138		
Acknowledgements	138		
References	139		
		10. Reproduction in Agnathan Fishes: Lampreys and Hagfishes	193
8. Neuroendocrine Regulation in Sex-changing Fishes	149	1. Introduction	193
1. Introduction	149	2. Hagfish Reproduction	194
2. Hermaphroditism in Fishes	149	2.1. The Hagfish Gonad	195
2.1. Protogynous Sex Reversal	151	2.1.1. Sex differentiation	195
2.2. Protandrous Sex Reversal	151	2.1.2. The ovary	195
2.3. Bidirectional (Serial) Sex Reversal	152	2.1.3. The testis	196
3. Hypotheses of Natural Sex Reversal	152	2.2. Secondary Sexual Characteristics	196
4. Social Factors Affecting Sex Reversal	153	2.3. The Hypothalamic–pituitary–gonadal (HPG) Axis of Hagfishes	196
5. Neuroendocrine Factors Affecting Sex Reversal	154	2.3.1. Neurohypophysis and adenohipophysis	196
5.1. Gonadal Steroids	154	2.3.2. Reproductive hormones	196
5.2. Peptides	156	3. Lamprey Reproduction	197
5.3. Monoamines	157	3.1. The Lamprey Gonad	197
6. Studies on the Saddleback Wrasse	158	3.1.1. Lifecycle	197
7. Future Research	164	3.1.2. Development of larval gonads	197
References	164	3.1.3. The ovary	198
		3.1.4. The testis	198

3.2. Secondary Sexual Characteristics	198	5.3. Thyroid Hormones	224
3.3. The Hypothalamic–pituitary–gonadal (HPG) Axis of Lampreys	198	5.4. Calcitonin (CT)	224
3.3.1. Neurohypophysis and adenohypophysis	198	5.5. Serotonin (5-HT)	224
3.3.2. Gonadotropin-releasing hormone (GnRH)	198	5.6. Neurohypophysial Hormones	225
3.3.3. Gonadotropin-releasing hormone receptor (GnRH-R)	199	6. Hormones, Sexual Differentiation, and Sexual Maturation	226
3.3.4. Gonadotropin (GTH)	199	7. Hormones, Reproductive Behaviors, and Sensory Function	229
3.3.5. Glycoprotein hormone (GpH) receptors	200	8. Environmental Influences on Circulating Hormone Levels and Reproduction	229
3.3.6. Reproductive steroids	202	9. Conclusions and Future Directions	230
3.4. Circulating Hormones During Reproductive Cycles	203	Acknowledgements	231
4. Summary	204	References	231
References	205	12. Hormones and Reproduction of Sarcopterygian Fishes	239
11. Hormones and Reproduction in Chondrichthyan Fishes	209	1. Introduction	239
1. Reproduction in Chondrichthyan Fishes	209	2. Coelacanth	240
1.1. Reproductive Modes	209	3. Lungfishes	240
1.2. Reproductive Cycles	210	3.1. Spawning	241
1.3. Mating and Reproductive Behaviors	211	3.2. Parental Care of Young	241
2. The Hypothalamic–Pituitary–Gonadal (HPG) Axis	211	3.3. Hormones Involved in Reproduction	241
2.1. Gonadotropin-releasing Hormone (GnRH)	211	4. Concluding Remarks	243
2.2. Pituitary Structure and Gonadotropins (GTHs)	213	References	243
3. Hormonal Regulation in Females	215	13. Endocrine-active Chemicals (EACs) in Fishes	245
3.1. Structure and Function of the Female Reproductive Tract	215	1. Introduction	245
3.2. Steroidogenesis, Steroidogenic Enzymes, and Steroid Receptors	216	1.1. Endocrine Disruption in Fishes	246
3.3. Gonadal Steroid Cycling and Functions	217	2. Mechanisms of Endocrine-Active Chemical (EAC) Signaling	246
3.3.1. 17 β -estradiol (E ₂)	217	2.1. Estrogenic Signaling Pathways	247
3.3.2. Progesterone (P ₄)	219	2.1.1. Estrogen receptors (ERs)	247
3.3.3. Androgens	219	2.1.2. Estrogen receptor (ER) ligand promiscuity	247
4. Hormonal Regulation in Males	219	2.1.3. Estrogen additivity	247
4.1. Testicular Structure and Spermatogenesis	219	2.2. Androgenic Signaling Pathways	248
4.2. Steroidogenesis, Steroidogenic Enzymes, and Steroid Receptors	220	2.3. The Effect of Endocrine-active Chemicals (EACs) on Steroidogenesis and Steroid Metabolism	248
4.3. Gonadal Steroid Cycling and Functions	221	3. Multidimensional Mixture Complexity	248
4.3.1. Androgens	221	4. Consequences of Specific Life-Stage Exposures	248
4.3.2. Estrogens	222	5. Organizational and Activational Effects of Endocrine-Active Chemicals (EACs)	248
4.3.3. Progesterone (P ₄)	223	5.1. Organizational Disruption	249
5. Other Hormones Involved in Reproduction in Males and Females	223	5.1.1. Gonadal differentiation	249
5.1. Corticosterone (CORT)	223	5.1.2. Gonadal intersex	249
5.2. Relaxin	223	5.2. Activational Disruption	251

5.2.1. Vitellogenin (Vtg) induction in male fishes	251	6.1.3. Nonsteroidal estrogenic compounds in waste water treatment plant (WWTP) effluent	253
5.2.2. Central activational effects: feedback disruption	252	6.2. Masculinizing Effects of Endocrine-active Chemicals (EACs)	254
5.2.3. Activation of gametogenesis	252	6.3. Pesticides in the Environment	254
6. Evidence of Reproductive Disruption in Free-Living Fishes	252	6.4. Neuroactive Pharmaceuticals in the Environment	255
6.1. Waste Water Treatment Plant (WWTP) Effluent Interaction with Estrogen Signaling Networks	253	6.5. Polychlorinated Biphenyls (PCBs) in the Environment	255
6.1.1. Steroidal estrogens in waste water treatment plant (WWTP) effluents	253	7. Conclusions	255
6.1.2. Synthetic steroidal estrogens in waste water treatment plant (WWTP) effluents	253	References	256

Series Preface	xiii		
Volume Preface	xv		
List of Contributors	xvii		
1. Sex Determination and Sexual Differentiation in Amphibians			
1. Introduction	1		
2. Sex Determination	1		
2.1. Sex Chromosomes	2		
2.2. Evolution of Sex Chromosomes	3		
2.3. Markers of Sex Chromosomes	4		
3. Sex Differentiation	4		
3.1. Origin of Germ Cells	5		
3.2. The Undifferentiated Gonad	6		
3.3. From the Bipotential Gonad to the Testis or the Ovary	7		
3.4. Tractus Differentiation and Post-metamorphosis Events	7		
4. Sensitivity of Sex Determination/Differentiation to Epigenetic Factors	8		
4.1. Effect of Rearing Temperature	8		
4.2. Breeding Experiments	9		
5. The Role of Steroid Hormones	10		
5.1. Treatment with Steroids	10		
5.2. Synthesizing Enzymes	10		
5.3. Steroid Hormone Receptors	11		
5.4. Inhibition of Steroid Action or Synthesis	11		
5.5. Steroids and Temperature	11		
6. Genes Involved in Gonadal Sex Differentiation	11		
7. Undifferentiated Races, Hermaphroditism, and Unisexals	14		
8. Conclusion	14		
Abbreviations	15		
References	15		
2. Neuroendocrine Control of Reproduction in Amphibians			
1. Introduction	21		
2. Gonadotropin-Releasing Hormone (GnRH) Systems	21		
		2.1. An Overview of the Amphibian Hypothalamic–Pituitary System	21
		2.2. Ontogeny, Distribution, and Function of the GnRH Systems	22
		2.3. The Pattern of GnRH Release from the Amphibian Brain	24
		2.4. Structure and Function of GnRH Receptors in Amphibians	25
		3. Regulation of the GnRH-I System	26
		3.1. An Overview	26
		3.2. Modulation of the GnRH-I System by Gonadal Steroid Hormones	27
		3.3. Modulation of the GnRH-I System by Dopamine (DA)	28
		3.4. Modulation of the GnRH-I System by Endocannabinoids	28
		3.5. Modulation of the GnRH-I System by RFamides	28
		3.6. Modulation of the GnRH-I System by Mesotocin/Opsin-positive Neurons	29
		3.7. Modulation of the GnRH-I System by Social and Environmental Cues	29
		4. The Roles of Peripheral GnRH in Reproduction	30
		4.1. Overview	30
		4.2. GnRH-I and Chemosensory Function	30
		4.3. Peripheral GnRH in Gonadal Regulation	30
		5. Nonapeptides and Neurosteroids	31
		6. Future Directions	31
		Abbreviations	32
		References	32
3. Testicular Structure and Control of Sperm Development in Amphibians			
		1. Introduction	39
		2. Urodeles	39
		2.1. Testicular Structure	39
		2.1.1. General gross anatomical structure	39
		2.1.2. Histomorphic structure and sperm development	40
		2.2. Regulation of Testicular Activity	41

2.2.1. Endocrine and molecular events associated with spermatogenesis and spermiogenesis	41	3.7. Corpus Luteum	69
2.2.2. Control of spermiation	42	3.8. Follicular Atresia	69
2.2.3. Control of the interstitial compartment	42	4. Oviductal Structure	70
3. Anurans	44	4.1. Infundibulum	72
3.1. Testicular Structure	44	4.2. Pars Recta or Atrium	73
3.1.1. General gross anatomical structure	44	4.3. Pars Convoluta or Ampulla	74
3.1.2. Histomorphic structure and sperm development	44	4.4. Ovisac	76
3.2. Regulation of Testicular Activity	45	Acknowledgements	78
3.2.1. Endocrine and molecular events associated with spermatogenesis and spermiogenesis	45	Abbreviations	78
3.2.2. Control of spermiation	47	References	78
3.2.3. Control of the interstitial compartment	47		
4. Gymnophiona	48	5. Hormones, Sex Accessory Structures, and Secondary Sexual Characteristics in Amphibians	
4.1. Testicular Structure	48	1. Introduction	83
4.1.1. General gross anatomical structure	48	2. Sex Accessory Structures	83
4.1.2. Histomorphic structure and sperm development	48	2.1. Wolffian Ducts/Vas Deferens	83
4.2. Regulation of Testicular Activity	49	2.2. Müllerian Ducts	84
4.2.1. Endocrine and molecular events associated with spermatogenesis and spermiogenesis	49	2.2.1. Oviduct of <i>Ascaphus</i>	85
		2.2.2. Uterus of viviparous anurans	85
		2.2.3. Uterus of <i>Salamandra</i>	85
		2.2.4. Uterus of caecilians	86
		2.3. Penis of <i>Ascaphus</i>	86
		2.4. Cloacal Glands of Salamanders	86
		2.5. Phallosome of Caecilians	87
5. Summary	49	3. Secondary Sexual Characteristics	87
Abbreviations	50	3.1. Amphibian Skin	88
References	50	3.2. Anuran Breeding Glands	88
		3.2.1. Adhesive glands	88
		3.3. Nuptial Excrescences of Anurans	89
		3.4. Tusks/Spines	89
		3.5. Tail Fin and Nuptial Pads of Newts	89
		3.6. Teeth of Plethodontids	90
		3.7. Muscles	90
		3.8. Vomerolabial Organ	91
		3.9. Color	91
		3.10. Salamander Courtship Glands	91
		3.10.1. Caudal glands in the middorsal tail base	91
		3.10.2. Caudal glands in the midventral tail base	92
		3.10.3. Cloacal glands that secrete onto epidermal areas	92
		3.10.4. Genial glands	92
		3.10.5. Mental glands	92
		3.10.6. Nasolabial glands (cirri)	93
		3.10.7. Skin glands of <i>Taricha</i>	93
		4. Future Work	93
		Abbreviations	94
		References	94
4. Hormones and the Female Reproductive System of Amphibians			
1. Introduction	55		
2. Ovarian Structure	56		
3. Oogenesis	57		
3.1. Oogonia	59		
3.2. Folliculogenesis	60		
3.3. Primary Growth	60		
3.4. Secondary Growth	62		
3.5. Oocyte Maturation	66		
3.6. Oogenesis Stages	66		
3.6.1. Primary growth: stage 1	68		
3.6.2. Primary growth: stage 2	68		
3.6.3. Primary growth: stage 3	68		
3.6.4. Secondary growth: stage 4	68		
3.6.5. Secondary growth: stage 5	68		
3.6.6. Secondary growth; full-grown: stage 6	68		
3.6.7. Oocyte maturation: stage 7	68		

6. Stress and Reproduction in Amphibians	
1. Introduction	99
2. Definitions of Stress	99
3. The Hypothalamus–Pituitary–Adrenal (HPA) Axis in Amphibians	101
3.1. Regulation of the Hypothalamus–pituitary–adrenal (HPA) Axis	102
4. Neuronal Circuits Mediating Endocrine Response to Stressors	103
5. Response of the Amphibian Endocrine System to Stressors	103
5.1. Effects of Water Quality and Water–borne Contaminants on the Hypothalamus–pituitary–adrenal (HPA) axis	105
5.2. Multiple Stressor Effects on the Hypothalamus–pituitary–adrenal (HPA) Axis as a Result of Decreased Habitat Quality	105
5.3. Contribution of Multiple Stressors to Allostatic Load and Overload	106
6. Inhibitory Effects of Stress and the HPA axis on Reproduction	106
6.1. Effects of Stressors and Hypothalamus–pituitary–adrenal (HPA) Axis Hormones on Plasma Sex Steroid Levels	106
6.2. Effects of Stress and Hypothalamus–pituitary–adrenal (HPA) Axis Hormones on Gonadotropin–releasing hormone (GnRH), Gonadotropins, and Sex Steroid Synthesis	107
6.3. Effects of Stress and the Hypothalamus–pituitary–adrenal (HPA) Axis on Gametogenesis	108
6.4. Effects of Stress and Hypothalamus–pituitary–adrenal (HPA) Axis Hormones on Reproductive Behavior	108
6.5. Multiple Stressor and Habitat Quality Effects on Reproduction	109
7. Role of Glucocorticoids in Meeting Energy Demands during Reproduction	109
8. Adaptive Significance of Stress-Induced Inhibition of Reproduction	110
Abbreviations	111
References	112
7. Maternal Adaptations to Reproductive Modes in Amphibians	
1. Topics and Terminology	117
2. Oviductal Incubation	118
2.1. Urodela	119
2.1.1. The oviduct and its changes during gestation	119
2.1.2. Gestation time and endocrinological aspects	121
2.1.3. Mother–offspring interactions	122
2.1.3.1. Respiration and gas exchange	122
2.1.3.2. Osmoregulation and excretion	122
2.1.3.3. Immunology	122
2.1.3.4. Allocation of food	122
2.1.3.5. Parturition	123
2.2. Gymnophiona	123
2.2.1. The oviduct and its changes during reproduction	123
2.2.2. Gestation time and endocrinological aspects	125
2.2.3. Mother–offspring interactions	125
2.2.3.1. Respiration and gas exchange	125
2.2.3.2. Osmoregulation and excretion	126
2.2.3.3. Immunology	126
2.2.3.4. Allocation of food	126
2.2.3.5. Parturition	126
2.3. Anura	127
2.3.1. The oviduct and its changes during reproduction	127
2.3.2. Gestation time and endocrinological aspects	127
2.3.3. Mother–offspring interactions	128
2.3.3.1. Respiration and gas exchange	128
2.3.3.2. Osmoregulation and excretion	128
2.3.3.3. Immunology	128
2.3.3.4. Allocation of food	128
2.3.3.5. Parturition	128
3. Skin Incubation	128
3.1. Skin incubation in the Pipidae	129
3.1.1. The skin and its changes during reproduction	129
3.1.2. Gestation time and endocrinological aspects	131
3.1.3. Mother–offspring interactions	131
3.1.3.1. Respiration and gas exchange	131
3.1.3.2. Osmoregulation and excretion	131
3.1.3.3. Immunology	131
3.1.3.4. Allocation of food	131
3.1.3.5. Parturition	131

3.2. Skin incubation in the Hemiphractidae, Cryptobatrachidae, and Amphignathodontidae	131	3. Background to Reproductive Behaviors	144
3.2.1. The skin and its changes during reproduction	133	3.1. Mating	144
3.2.2. Gestation time and endocrinological aspects	133	3.2. Male Advertisement and Female Attraction	144
3.2.3. Mother—offspring interactions	134	3.3. Mate Searching	145
3.2.3.1. Respiration and gas exchange	134	4. Male Mating Behaviors	145
3.2.3.2. Osmoregulation and excretion	134	4.1. Androgens	145
3.2.3.3. Immunology	134	4.1.1. Androgens maintain expression of salamander mating behavior	145
3.2.3.4. Allocation of food	134	4.1.2. Androgens activate male mating behavior in some but not all anurans	146
3.2.3.5. Parturition	134	4.1.3. Sex steroid hormone brain receptors and mating	147
4. Other Sites of Incubation	134	4.1.4. Conclusions and future directions	147
4.1. Gastric Incubation in the Myobatrachidae	134	4.2. Arginine Vasotocin (AVT)	147
4.1.1. The stomach and its changes during reproduction	134	4.2.1. Arginine vasotocin (AVT) promotes expression of male sexual behavior in the rough-skinned newt	147
4.1.2. Gestation time	134	4.2.2. Arginine vasotocin (AVT) neurons and receptors in the urodele brain	148
4.1.3. Mother—offspring interactions	134	4.2.3. Mechanisms of arginine vasotocin (AVT) action in rough-skinned newts	148
4.1.3.1. Respiration and gas exchange	135	4.2.4. Conclusions and future directions	150
4.1.3.2. Immunology	135	4.3. Corticosterone (CORT)	150
4.1.3.3. Osmoregulation and excretion	135	4.3.1. Corticosterone (CORT) rapidly suppresses amplexic clasping	150
4.1.3.4. Allocation of food	135	4.3.2. Context modulates the effects of corticosterone (CORT) on amplexic clasping	151
4.1.3.5. Parturition	135	4.3.3. Corticosterone (CORT) modulates excitability of clasp-controlling neural circuits	151
4.2. Vocal Sac Incubation in the Cycloramphidae	135	4.3.4. Corticosterone (CORT) and endocannabinoid signaling	152
4.2.1. The vocal sac and its changes during reproduction	135	4.3.5. Conclusions and future directions	152
4.2.2. Gestation time and endocrinological aspects	135	4.4. Prolactin (PRL)	153
4.2.3. Father—offspring interactions	135	4.4.1. Prolactin promotes male mating behavior in salamanders	153
4.2.3.1. Respiration and gas exchange	135	4.4.2. Conclusions and future directions	154
4.2.3.2. Osmoregulation and excretion	135	4.5. Other Factors	154
4.2.3.3. Immunology	135	4.5.1. Nitric oxide	154
4.2.3.4. Allocation of food	135	4.5.2. Gonadotropins	154
4.2.3.5. Parturition	136	5. Male Advertisement Behavior	154
5. Conclusions	136	5.1. Androgens and Auditory Advertisement	154
Acknowledgements	136	5.1.1. Seasonal activation of calling	154
Abbreviations	137	5.1.2. Sex steroid hormone receptors in vocal and auditory brain areas	155
References	137	5.1.3. Development of the vocal system	155
		5.1.4. Conclusions	155
8. Hormones and Reproductive Behavior in Amphibians		5.2. Gonadotropins (GTHs) and Auditory Advertisement	156
1. Introduction	143		
2. Approaches	143		

5.3. Arginine Vasotocin (AVT) and Auditory Advertisement	156	4. Female Reproductive Cycle	176
5.3.1. Behavioral effects of arginine vasotocin (AVT)	156	4.1. Ovarian Cycles	176
5.3.2. Distribution of arginine vasotocin (AVT) cells, fibers, and receptors in the anuran brain	156	4.2. Hormones	176
5.4. Corticosterone and Auditory Advertisement	157	5. Environmental Control	178
5.4.1. The energetics–hormone–vocalization model	157	5.1. Temperature	178
5.4.2. Testing the energetics–hormone–vocalization model in explosive–breeding toads	157	5.2. Rainfall and Humidity	179
5.4.3. Conclusions and future directions	158	5.3. Photoperiod	180
5.5. Hormones and Olfactory Advertisement	158	5.4. Nutrition	180
6. Male Mate-Searching Behaviors	159	6. Bioregulatory Mechanisms (Molecular Machinery)	181
6.1. Habitat Preferences	159	7. Concluding Remarks	182
6.2. Locomotion	159	Abbreviations	182
6.3. Chemo-investigation	159	References	183
6.4. Sensitivity to Sensory Information	160	10. Hormones and Reproductive Patterns in Urodele and Gymnophionid Amphibians	
7. Female Reproductive Behaviors	160	1. Introduction	187
7.1. Female Receptive Behaviors	160	2. Life-History Patterns in Urodele Amphibians	187
7.1.1. Salamander mating behavior	160	2.1. Biphasic Life Cycle	188
7.1.2. Anuran mating behavior	160	2.2. Paedomorphic Life Cycle	188
7.2. Attraction to Male Social Signals	161	2.3. Direct Development in Fully Terrestrial Species without a Larval Stage	189
7.2.1. Sensitivity of the salamander vomeronasal sensory epithelium	161	2.4. Viviparity	189
7.2.2. Anuran phonotaxis	161	3. Ecological Factors Affecting the Timing of Reproduction	189
7.2.3. Salamander chemo-investigation	161	3.1. Roles for Hormones in Reproduction of Urodeles	190
7.3. Other Female Reproductive Behaviors	161	3.2. Hormonal Regulation in Male Urodeles	190
7.3.1. Salamander egg-laying behavior	161	3.3. Hormonal Regulation in Female Urodeles	190
7.3.2. Anuran mating vocalizations of females	162	3.4. Hormonal Control of Courtship and Mating in Urodeles	191
7.4. Conclusions and Future Directions	162	4. Fertilization	191
8. Final Conclusions	162	5. Representative Urodele Reproductive Cycles	192
Abbreviations	162	5.1. The Eastern Newt, <i>Notophthalmus viridescens</i>	192
References	162	5.2. Pacific Newts, <i>Taricha</i> species	193
9. Hormones and Reproductive Cycles in Anuran Amphibians		5.3. The Tiger Salamander, <i>Ambystoma tigrinum</i>	193
1. Introduction	171	6. Gymnophiona (Caecilians)	196
2. Reproductive Strategies	172	7. Future Directions	197
2.1. Seasonality	172	Acknowledgements	198
2.2. Oviparity/Viviparity	172	Abbreviations	199
2.3. Oviposition/Nesting Site	172	References	199
2.4. Mating Systems	173	11. Endocrine Disruption of Reproduction in Amphibians	
2.5. Clutch Size	173	1. Introduction	203
3. Male Reproductive Cycle	173		
3.1. Testicular Cycles	173		
3.2. Hormones	175		

2. Sources of Endocrine-Disrupting Chemicals (EDCs)	204	6. Endocrine-Disrupting Chemical (EDC) Effects in Amphibians	206
3. Amphibians as Targets for Endocrine-Disrupting Chemicals (EDCs) and Other Emerging Contaminants (ECs)	204	7. Future Studies	208
4. Amphibian Hormones Related to Metamorphosis and Reproduction	205	Abbreviations	208

Series Preface	xiii	6.3. Evolutionary Potential of Temperature-dependent Sex Determination (TSD)	28
Volume Preface	xv	6.4. Comments on the Coexistence of Temperature-dependent Sex Determination (TSD) and Sex Chromosomes	29
List of Contributors	xvii	7. <i>Where to go next: Future Research and Conclusions</i>	30
1. Sex Determination in Reptiles		Acknowledgements	31
1. Introduction	1	Abbreviations	31
2. What Mechanisms Occur in Reptiles?		References	31
Diversity of Sex-Determining Mechanisms (SDMs) and Patterns	2	2. Neuroendocrinology of Reptilian Reproductive Behavior	
2.1. Patterns of Genotypic Sex Determination	2	1. Introduction	39
2.2. Patterns of Temperature-dependent Sex Determination	8	2. Behavioral Displays in Ecological Context	40
2.3. Sex-determining Mechanisms as a Dichotomy or a Continuum?	10	2.1. <i>Anolis</i> Lizards and the Ecology of Visual Reproductive Displays	40
3. Who Exhibits Genotypic Sex Determination (GSD) and Temperature-dependent Sex Determination (TSD)? Taxonomic and Phylogenetic Distribution	12	2.2. Reproductive Communication in Other Reptilian Taxa	41
3.1. Chelonian and Squamate Sex Determination	12	2.2.1. Differences between males and females	41
3.2. Transitions between Sex-determining Mechanisms (SDMs)	15	2.2.2. Variation within sexes: Alternative reproductive strategies	42
4. How is Sex Determined? Proximate Mechanisms	16	2.3. Summary	43
4.1. Gonadal Differentiation and Gene Expression	16	3. Hormonal Control of Reproductive Behaviors in Adulthood	43
4.2. Physiological Mechanisms under Temperature-dependent Sex Determination (TSD)	18	3.1. Hormonal Control of Anole Reproduction	43
5. When is Sex Determined? Timing of Embryonic Sexual Liability	20	3.2. Hormonal Control in Species with Alternative Reproductive Strategies	44
5.1. Methods for Establishing the Thermosensitive Period (TSP)	20	3.3. Hormonal Control of Reproduction in Other Reptilian Taxa	45
5.2. Variation in the Thermosensitive Period (TSP) and its Ecological Implications	21	3.4. Summary	45
6. Why do Reptiles Exhibit a Diversity of Sex-determining Mechanisms (SDMS)? Ecology and Evolution	24	4. Neural Control of Reproductive Behaviors	46
6.1. Ecological Relevance: Does Temperature-dependent Sex Determination (TSD) Occur in Nature?	24	4.1. Neural and Muscular Control of Anole Reproduction	46
6.2. Adaptive Significance of Sex-determining Mechanisms (SDMs)	25	4.2. Neural Control of Whiptail Lizard Reproduction	49
		4.3. Neural Control of Reproduction in Other Reptiles	50
		4.4. Summary	50

5. Development of Reproductive Traits	50	4. Hormonal Regulation of Ovarian Function in Reptiles	
5.1. Development of Sex Differences in Anoles and Whiptail Lizards	50	1. Introduction	89
5.2. Development in Reptiles with Alternative Reproductive Morphs	51	1.1. Ovarian Structure	89
5.3. Development in Reptiles with Temperature-dependent Sex Determination (TSD)	52	1.2. Ovarian Development	89
5.4. Summary	53	1.2.1. Hormonal control of ovarian development	91
6. Adult Plasticity	53	1.3. Major Ovarian Hormones	91
6.1. Effects of Season and Hormone Manipulation in Anoles	53	1.4. Hypophysial Regulation of Ovarian Function	92
6.2. Effects of Season and Hormone Manipulation in Other Reptiles	54	2. Ovarian Steroids	92
6.3. Summary	55	2.1. Steroid Synthesis	94
7. Conclusions and Future Directions	55	2.2. Tissue Receptors	95
Abbreviations	55	2.3. Steroid-binding Proteins in Plasma	96
References	56	2.4. Peripheral Metabolism of Steroids	97
		3. Follicular Development	98
3. Hormonal Regulation of Testicular Functions in Reptiles		3.1. Recruitment	98
1. Introduction	63	3.2. Follicular Development	98
2. Testicular Structure	65	3.2.1. Roles of hormones in recruitment and folliculogenesis	100
2.1. Tubular Compartment of the Testis	66	3.2.2. Determinants of clutch size	100
2.2. Interstitial Compartment	67	3.2.3. Follicular atresia	101
3. Testicular Functions	69	3.3. Vitellogenesis	101
3.1. Spermatogenesis	69	3.3.1. Mechanisms of vitellogenesis	102
3.2. Steroidogenesis	74	3.3.2. Hormones and vitellogenesis	102
4. Regulation of Testicular Functions	76	3.3.3. Yolk steroids	104
4.1. Environmental Factors	76	4. Ovulation	104
4.2. Extratesticular Factors	76	4.1. Mechanisms of Ovulation in Reptiles	104
4.2.1. Hypothalamic hormones	76	4.2. Hormonal Control of Ovulation	105
4.2.2. Pituitary hormones	77	4.3. Oocyte Maturation	105
4.2.3. Other hormones	78	5. The Post-ovulatory Ovary: The Corpus Luteum	106
4.3. Intratesticular Factors	78	5.1. Morphological Changes in the Reptilian Corpus Luteum	106
4.3.1. Androgens	78	5.2. Steroid Production by the Corpus Luteum	107
4.3.2. Estrogens	79	5.3. Relaxin	107
4.3.3. Other paracrine factors	79	5.4. Hormones and Luteolysis	108
4.3.3.1. Sertoli cell-secreted factors	79	6. Future Directions: Application of Reproductive Endocrinology to Conservation	108
4.3.3.2. Testicular macrophage-secreted factor	80	Abbreviations	109
4.3.3.3. Histamine	80	References	109
4.3.3.4. Leydig cell-secreted factors	80		
5. Regulation of Testicular Immune Functions	80	5. Hormones and the Sex Ducts and Sex Accessory Structures of Reptiles	
6. Maintenance of Male Accessory Sex Organs and Courtship Behavior	81	1. Introduction	117
6.1. Accessory Sex Organs	81	2. Oviparity	117
6.2. Courtship Behavior	82	3. Reproductive Cycles and Sex Hormones	118
7. Conclusions	82	4. The Male	118
Abbreviations	84	4.1. Efferent Ductules	118
References	84	4.2. Ductus Epididymis	120
		4.3. Ductus Deferens	121

7. Conclusions and Research Directions	202	5. Reproductive Morphology and Physiology: Requirements or Refinements of Viviparity?	250
7.1. Conclusions	202	6. Egg Retention and the Lengthening of Gestation	250
7.2. Future Research Directions	203	7. The Reduction of the Eggshell	255
Abbreviations	204	8. Emergence of the Placenta	259
References	204	9. Maternal Recognition of Pregnancy	262
8. Hormones and Behavior of Reptiles		10. Conclusions	264
1. Introduction	215	11. Research Questions & Future Directions	265
1.1. Organization and Other Developmental Effects of Reptilian Hormones on Behavior	216	Abbreviations	268
1.2. Endocrine Effects on Behavior in Viviparous Species	220	References	268
1.3. Activational Events	221	10. Hormones and Reproductive Cycles in Turtles	
1.4. Endocrine Network Theory and the Regulation of Behaviors	222	1. Introduction	277
2. The Form of Natural, Sexual, and Social Selection	223	2. Methodologies	278
2.1. Hormone Modulation of Male Reproductive Behaviors	227	2.1. Gonadal Cycles	278
2.2. Sexual Selection, Life History, and Correlated Selection—Hormones, Behavior, and Fitness	227	2.2. Hormonal Cycles	280
2.3. Testosterone (T) and Signals—Colors and Badges	228	3. Different Types of Cycles and Timing of Reproduction in Turtles	280
2.4. Aggression and Territoriality	228	3.1. Cyclicity	280
2.5. Testosterone (T) and Courtship/Copulations	230	3.1.1. Prenuptial and postnuptial reproductive cycles	280
2.6. Integration—Hormones, Performance, Behavior, and Fitness	230	3.1.2. Sexual maturation	281
2.7. Modulation of Aggressive and Courtship Behavior: Arginine Vasotocin (AVT)	230	3.1.3. Nesting cyclicity	282
2.8. Interactions with CNS Neuroendocrine Hormones	233	3.1.4. Variation in the number of clutches	285
2.9. Parental Care—Crocodilians as Model Organisms	233	3.2. Timing of Reproduction	285
3. Social Networks and Endocrine Networks	233	4. Hormonal and Gonadal Reproductive Cycles	285
3.1. Social Groups, Monogamy, Filialive Behaviors, and the Suppression of 'Aggression'	236	4.1. Cryptodira	285
3.2. The Potential Role of Prolactin as the Master Regulator of Reptilian Behaviors	237	4.1.1. Freshwater turtles	285
Abbreviations	240	4.1.2. Sea turtles	288
References	240	4.1.3. Terrestrial turtles (tortoises)	290
9. Viviparity in Reptiles: Evolution and Reproductive Endocrinology		4.2. Pleurodira	293
1. Introduction	247	4.2.1. Chelidae	293
2. Defining Reproductive Mode	247	4.2.2. Podocnemididae	295
3. Evolution of Viviparity within Squamates	248	4.2.3. Pelomedusidae	295
4. Selective Forces for the Evolution of Viviparity	248	5. Other Hormonal Cycles	296
		5.1. Metabolic and Stress Hormones	296
		5.1.1. Thyroid hormones and their possible role in reproduction	296
		5.1.2. Corticosterone (CORT)	297
		5.1.3. Catecholamines	297
		5.2. Pineal Hormones and Annual Cycles	297
		6. Conclusions	298
		Abbreviations	299
		References	299
		11. Hormones and Reproductive Cycles in Crocodilians	
		1. Introduction	305
		2. Development	306

2.1. Sexual Differentiation	307	2.3.1.11. Shinisauridae	337
2.1.1. Gonadal development	307	2.3.1.12. Chamaeleonidae	338
2.1.2. Secondary sex characteristics	308	2.3.1.13. Agamidae	338
2.2. Juvenile Growth and Peripubertal Seasonality	309	2.3.1.14. Scincidae	339
3. Reproductive Cycles	309	2.3.1.15. Xantusiidae	340
3.1. Seasonality	309	2.3.1.16. Gerrhosauridae	340
3.2. Male Reproductive Cycles	311	2.3.1.17. Cordylidae	340
3.3. Female Reproductive Cycles	312	2.3.1.18. Sphaerodactylidae, Gekkonidae, Phyllodactylidae, Eublepharidae, Diplodactylidae, Carphodactylidae, Pygopodidae	340
3.3.1. Vitellogenesis and oocyte maturation	312	2.3.1.19. Dibamidae	341
3.3.2. Ovulation, gravidity, and oviposition	312	2.3.2. Other aspects of endocrine regulation of reproductive cycles	341
4. Current and Future Research Directions	315	2.3.2.1. Hypothalamus–pituitary–adrenal (HPA) axis	341
4.1. Molecular Endocrinology in Crocodylians	315	2.3.2.2. Endogenous rhythms	342
4.1.1. Steroidogenesis and steroid metabolism	315	3. Conclusions and Future Directions	343
4.1.2. Peptide hormones and hormone receptors	315	Abbreviations	344
4.2. Research Gaps	316	References	344
Abbreviations	316		
References	316		

12. Hormones and Reproductive Cycles in Lizards

1. Introduction	321
1.1. Why Study Lizards?	321
1.1.1. Practical considerations	321
1.1.2. Evolutionary considerations	322
1.1.3. Environmental and conservation considerations	325
1.2. Overview for Remainder of Chapter	326
2. Reproductive Cycles	326
2.1. Seasonality of Reproduction	326
2.2. Types of Reproductive Cycle	328
2.3. Endocrine Regulation	330
2.3.1. Overview of the hypothalamus–pituitary–gonadal (HPG) axis regulation of reproductive cycles	330
2.3.1.1. Iguanidae	331
2.3.1.2. Amphisbaenidae, Trogonophidae, Bipedidae, Blanidae, Cadeidae, and Rhineuridae	335
2.3.1.3. Lacertidae	335
2.3.1.4. Teiidae	336
2.3.1.5. Gymnophthalmidae	336
2.3.1.6. Anguidae, Anniellidae, and Diploglossidae	336
2.3.1.7. Helodermatidae	337
2.3.1.8. Xenosauridae	337
2.3.1.9. Lanthanotidae	337
2.3.1.10. Varanidae	337

13. Hormones and Reproductive Cycles in Snakes

1. Introduction	355
2. Hormones and Reproductive Cycles in Snakes	356
2.1. Steroids and Reproduction in Snakes other than <i>Thamnophis sirtalis parietalis</i>	357
2.1.1. Females	357
2.1.2. Males	358
2.2. Steroids and Reproduction in Red-sided Garter Snakes (<i>Thamnophis sirtalis parietalis</i>)	359
2.2.1. Females	359
2.2.2. Males	359
2.3. Hypothalamic Hormones, Gonadotropins, Hormone Receptors, and Binding Globulins in Snakes	360
2.4. The Neuroendocrinology of Reproduction in Snakes	361
3. Influences on the Reproductive Cycle	362
3.1. Environmental Influences	362
3.2. Social Influences	362
3.3. Physiological Influences	364
3.4. Embryonic Influences	365
4. Future Directions to Augment Existing Knowledge	365
Acknowledgements	367
Abbreviations	367
References	367

14. Endocrine Disruption of Reproduction in Reptiles

1. Introduction	373	4.1. Hatching and Neonatal Growth	386
2. Reptiles as Models of EDC Exposure	376	4.2. Growth, Metabolism, and Effects on Reproduction	387
3. Endocrine-Disrupting Chemicals (EDCs) and Reptilian Reproduction	376	4.3. Thyroidal–Gonadal Axes and Effects on Reproduction	389
3.1. Tissue Concentrations of Endocrine-disrupting Chemicals (EDCs) in Reptiles	377	5. Conclusions	390
3.2. Sex Steroid Hormone Alterations	378	Abbreviations	390
3.3. Reproductive Organ Abnormalities	382	References	391
3.4. Sex Determination	384	Species Index	397
4. Endocrine-Disrupting Chemicals (EDCs) and Reptilian Thyroid Function	386	Subject Index	401

Series Preface	xiii		
Volume Preface	xv		
List of Contributors	xvii		
1. Neuroendocrine Control of Reproduction in Birds	1		
1. Introduction	1		
2. The Hypothalamus–Pituitary System (HPS)	2		
3. Mechanisms and Pathways Regulating Gonadotropin (GTH) Secretion	3		
3.1. Gonadotropin-releasing Hormone (GnRH)	3		
3.2. Gonadotropin-inhibiting Hormone (GnIH)	5		
4. Mechanisms and Pathways Regulating Ovulation and Oviposition	7		
4.1. Regulation of Ovulation	7		
4.2. Regulation of Oviposition	8		
5. Mechanisms and Pathways Regulating Prolactin (PRL) Secretion	8		
6. Mechanisms and Pathways Regulating Seasonal Reproduction	9		
6.1. Seasonal Reproduction in Birds	9		
6.2. Seasonal Changes in Gonadotropin-releasing Hormone (GnRH)	11		
6.3. Photoreceptor	12		
6.4. Biological Clock	12		
6.5. Melatonin (MEL)	13		
6.6. Thyroid Hormones	14		
7. Future Research Directions	15		
References	16		
2. Avian Testicular Structure, Function, and Regulation	27		
1. Central Mechanisms Regulating Testicular Development	27		
2. Endocrine Influence on Development of the Avian Male Phenotype	28		
3. Avian Testicular Anatomy	28		
3.1. Leydig Cells	28		
3.2. Seminiferous Tubules	29		
		4. Endocrine and Exocrine Functions of Avian Testes	29
		4.1. Testicular Androgen Hormone Synthesis and Secretion	29
		4.2. Spermatogenesis	29
		4.3. Sperm Maturation, Transport, and Storage	30
		4.4. Seasonal Testicular Regression and Programmed Cell Death	30
		5. Endocrine and Paracrine Control of Avian Testicular Function	31
		5.1. Luteinizing Hormone (LH)	31
		5.2. Follicle-stimulating Hormone (FSH)	31
		5.3. Gonadotropin-inhibiting Hormone (GnIH)	36
		5.4. Inhibin and Activin	37
		5.5. Melatonin (MEL)	37
		5.6. Prolactin (PRL)	38
		5.7. Glucocorticoids and Metabolic Hormones	38
		5.8. Nitric Oxide (NO) and D-aspartate (D-Asp)	39
		5.9. An Avian Androgen-binding Protein?	39
		6. Exogenous Regulation of Testicular Function	40
		6.1. Abiotic Factors	40
		6.1.1. Photophase	40
		6.1.2. Precipitation	40
		6.1.3. Temperature	42
		6.1.4. Food	42
		6.2. Life History	43
		6.2.1. Breeding strategy	43
		6.2.2. Migratory vs. sedentary species	43
		6.2.3. Brood parasitism	44
		6.2.4. Social cues	44
		7. Ecology of Testicular Functions	45
		7.1. Linking Testosterone (T) and Sperm Quality	45
		7.2. Correlates of Testicular Size	45
		7.2.1. Body size and age	45
		7.2.2. Testosterone (T), mating systems, and geography	46
		7.3. Evolutionary Explanations for Testicular Size Asymmetry	47
		7.4. Theories of Sperm Competition	47
		7.5. Negative Consequences of Large Testes	48
		8. Testicular Dysfunction	49
		8.1. Phytoestrogens	49

8.2. Hybridization and Infertility	49	2.3. Conclusion	93
8.3. Testicular Pathology	50	3. Mechanisms of Accumulation	94
9. Anthropogenic Effects on Testicular Function	50	3.1. Why Relevant?	94
9.1. Introduced Species	50	3.2. Hormone Production	94
9.2. Climate Change	51	3.3. Accumulation of Hormones in the Egg	95
9.3. Direct Human Impact—Endocrine Disruption and Urbanization	52	3.4. Differential Regulation of Yolk and Circulating Levels	95
10. Conclusions and Future Directions	52	3.5. Conclusion	96
References	54	4. Effects on Offspring	96
3. Organization and Functional Dynamics of the Avian Ovary	71	4.1. Early Development	96
1. The Avian Ovary	71	4.1.1. Time until hatching and growth	96
2. Developmental Dynamics and Organization of the Avian Ovary	72	4.1.2. Begging/competitiveness	100
2.1. Organization of the Embryonic Ovary	72	4.1.3. Metabolic rate	100
2.2. Postembryonic Development of the Ovary	73	4.1.4. Immune system	101
2.3. Endocrine, Paracrine, and Autocrine Factors Regulating Ovarian Function	74	4.1.5. Endocrine system	101
2.3.1. Protein hormones	74	4.1.6. Survival	101
2.3.2. Steroids and steroidogenesis	76	4.1.7. Sex allocation	101
2.3.3. Prostaglandins and thyroid hormones	77	4.2. Long-term Effects	102
2.3.4. Innate and adaptive immunity in ovarian tissues	77	4.2.1. Competitiveness	102
3. Reproductive Seasonality	78	4.2.2. Dispersal	102
3.1. Environmental Cues Mediating Ovarian Growth	78	4.2.3. Coloration, morphology, and song	102
3.2. Ovulation—Oviposition Cycles	79	4.2.4. Reproduction	103
3.3. Regression of the Ovary During the Photorefractory Period and Molt	80	4.2.5. Behavioral syndromes or personalities	103
4. Follicular Development	80	4.2.6. Endocrine system	103
4.1. Primordial Follicular Reserve and Initial Recruitment	81	4.2.7. Survival	104
4.2. Follicular Selection	82	4.3. Indirect Effects on Other Family Members	104
4.3. Preovulatory Follicular Growth and Final Differentiation	83	4.4. Other Yolk Hormones	104
4.4. Ovulation	84	4.5. Conclusion	105
4.5. Follicular Atresia	85	5. Mechanisms of Action	105
4.6. Evidence for, and Proposed Functions of, a Local Ovarian Clock	86	5.1. Why Relevant?	105
5. Summary	86	5.2. Activational and Organizational Effects	105
Acknowledgements	86	5.3. Hormone Uptake	106
References	87	5.4. Hormone Metabolism	106
4. Maternal Hormones in Avian Eggs	91	5.5. Binding Proteins	107
1. Introduction: Importance of the Topic and Outline	91	5.6. Receptors (Time, Location)	107
2. Hormones and Levels	92	5.7. Embryonic vs. Maternal Hormones	107
2.1. Which Hormones?	92	5.8. Conclusion	108
2.2. What Determines Hormone Levels in Eggs?	93	6. Functional and Evolutionary Aspects	108
		6.1. Within-clutch Variation	109
		6.1.1. Laying order and sibling competition	109
		6.1.2. Egg quality	111
		6.1.3. Parentage	112
		6.1.4. Sex	112
		6.1.5. Bet-hedging	113
		6.2. Between-clutch Variation	113
		6.2.1. Social interactions	113
		6.2.2. Male quality	114
		6.2.3. Food	114
		6.2.4. Season	115
		6.2.5. Female quality	115
		6.2.6. Parasites	116

6.3. Between-species Comparison	116	2.1.1. Environmental and social stimuli influence male testosterone (T)	154
6.3.1. Social stimulation	116	2.1.2. Hormone manipulations establish a role for testosterone (T) in male courtship and copulation	155
6.3.2. Parasite exposure	116	2.1.3. Many testosterone (T) effects on male courtship and copulation are mediated by its metabolites	155
6.3.3. Predation risk	117	2.2. Steroid control of female courtship and mating behaviors	157
6.4. Conclusion	117	2.2.1. Estrogens and female sexual behavior	157
6.5. Parent—Offspring Conflict and Coadaptation	118	2.2.2. Progestogens and female sexual behavior	157
7. Conclusion, GAPS, and perspectives	119	2.2.3. Environmental and social stimuli influence female 17 β -estradiol (E ₂) concentrations and behavior	158

6. Hormonal Regulation of Avian Courtship and Mating Behaviors	153		
1. Introduction	153		
2. Steroid Hormones Synchronize Courtship and Mating Behaviors with Reproductive Physiology and Environmental Factors	153		
2.1. Steroid Control of Male Courtship and Mating Behaviors	154		

5.1.2. Appetitive and consummatory sexual behavior rely on partially distinct neuronal mechanisms	165	3. Incubation	183
5.1.3. The medial preoptic nucleus is part of a neural circuit that regulates male sexual behavior	165	3.1. Costs of Incubation and Parental Attentiveness	183
5.2. Male Songbirds	165	3.2. Behavioral Patterns—Roles of the Sexes	184
5.2.1. Testosterone (T) stimulates male courtship song	165	3.3. Brood-patch Formation	185
5.2.2. Testosterone (T) may act within the song-control system to influence sensorimotor aspects of song	166	3.4. Laying, Incubation, and Asynchronous Hatching	186
5.2.3. Evidence that testosterone (T) acts in the medial preoptic nucleus (POM) to motivate male courtship song	166	3.5. Hormonal Control of Incubation	186
5.2.4. The medial preoptic nucleus (POM) is part of a neural circuit that regulates male courtship song	166	3.6. Initiation and Maintenance of Incubation	186
5.3. How Does Testosterone (T) Modulate Activity Within Regions Underlying Courtship and Copulation in Males?	166	3.7. Steroid Effects on Incubation	188
6. Neuroendocrine Regulation of Female Sexual Behavior	168	3.8. Regulation of Prolactin (PRL) Secretion	188
6.1. Female Ring Doves and Japanese Quail	168	3.9. Renesting and Responses to Nest Failure	189
6.1.1. 17β -estradiol (E_2) acts within the ventromedial hypothalamus to regulate female sexual behavior	168	4. Care of Young	189
6.1.2. Pathways underlying vocal self-stimulation in ring doves	168	4.1. The Altricial—Precocial Spectrum	189
6.2. Female Songbirds	169	4.2. Hormonal Correlates of Posthatching Parental Behavior	190
6.2.1. Estrogen-sensitive circuits regulate female songbird responses to male courtship song	169	4.3. Prolactin (PRL) Level and Parental Effort	191
6.2.2. Endocrine influences on auditory responses to male song	169	4.4. Parent—Chick Interactions	191
6.2.3. Neuroendocrine regulation of female sexually motivated responses to courtship song	169	5. Testosterone (T) and Male Parental Behavior	192
6.3. How Does 17β -estradiol (E_2) Modulate Activity Within Regions Underlying Female Responses to Male Courtship?	170	6. Effects of Environmental Stress on Parental Behavior—Roles of Corticosterone (CORT) and Prolactin (PRL)	193
7. Closing Remarks	171	7. Special Cases of Parental Behavior	194
Acknowledgments	171	7.1. Obligate Brood Parasites	194
References	172	7.2. Helpers at the Nest	194
		7.3. Effects of Domestication on Hormonal and Behavioral Patterns	195
		8. Future Research	195
		References	196
7. Hormones and Regulation of Parental Behavior in Birds	181	8. Hormones in Migration and Reproductive Cycles of Birds	205
1. Introduction	181	1. Introduction	205
2. Nest Building	182	2. Life History and Ecology of the Subspecies of the White-crowned Sparrow (<i>Zonotrichia leucophrys</i>)	205
2.1. Behavioral Patterns—Roles of the Sexes	182	3. Hypothalamic—pituitary Control of Hormones in the Reproductive Cycles of Male and Female Birds	206
2.2. Interaction with Courtship Behavior	182	4. Annual Cycles of Migratory and Sedentary White-crowned Sparrows	206
2.3. Hormonal Correlates—Sex Steroids	182	5. Applying Finite State Machine Theory to Migration and Breeding	207

6.5. Regulation of the Developmental Phases of Migratory and Breeding Stages	212	11. Future Directions	228
6.6. Morphological Evidence for Separate Control Systems for Migration and Breeding	212	11.1. Vernal and Autumn Migration: Similarities and Differences	228
7. The Vernal Migratory Stage	213	Acknowledgements	228
7.1. The Developmental Phase	213	References	229
7.1.1. Hyperphagia and fattening	213	9. Endocrine Disruption of Reproduction in Birds	239
7.1.2. Carbohydrates and lipids	214	1. Introduction	239
7.1.3. The enigmatic roles of the pancreatic hormones: insulin and glucagon	214	2. Impacts of Endocrine-disrupting Chemicals (EDCs)	240
7.1.4. Role of the gonad	215	3. Modes of Exposure in Birds	241
7.1.5. Prolactin (PRL)	215	3.1. Avian Models	242
7.1.6. Leptin	216	4. Challenges in Assessing Endocrine-disrupting Chemical (EDC) Effects in Birds	243
7.1.7. Ghrelin	216	4.1. Consideration of the Lifecycle of Endocrine-disrupting Chemicals (EDCs)	243
7.1.8. Corticosterone (CORT)	216	5. Discerning the Effects of Different Classes of Endocrine-disrupting Chemicals (EDCs)	243
7.1.9. Hormone action of corticosterone (CORT)	217	6. Lifecycle and Species Differences in the Timing of Vulnerability to Endocrine-disrupting Chemicals (EDCs)	243
7.1.10. Flight-muscle hypertrophy	218	6.1. Sexual Differentiation in Birds	244
7.1.11. Erythropoiesis	219	6.2. Discerning Effects in Altricial Birds as Compared to Precocial Birds	244
7.2. The Mature Capability Phase	220	6.3. Discerning Effects in Precocial Birds	245
7.2.1. Fueling and flight cycles	220	6.4. Steroid- and Endocrine-disrupting Chemical (EDC)-sensitive Neural Centers and the Hypothalamic—pituitary—gonadal (HPG) Axis in Japanese Quail	246
7.2.2. Melatonin (MEL)	220	7. Major Effects of Endocrine-disrupting Chemicals (EDCs) in Avian Species	247
7.2.3. Corticosterone (CORT)	220	7.1. Observations in Wild Populations	247
7.2.4. Captive studies and corticosterone (CORT)	221	7.2. Laboratory Studies in Birds	248
7.2.5. The migration modulation hypothesis	221	7.3. Estrogen-active Compounds	249
7.2.6. Corticosterone-binding globulin (CBG)	222	7.3.1. Methoxychlor (MXC)	249
7.2.7. Metabolic adjustments during fueling/flight cycles	222	7.3.2. 3,3',4,4',5-Pentachlorobiphenyl-126 (PCB-126), other polychlorinated biphenyls (PCBs), and dioxins	250
7.3. The Termination Phase	223	7.3.3. Endocrine-active phytochemicals (phytoestrogens)	250
7.3.1. Arrival biology	223	7.4. Anti-androgenic Endocrine-disrupting Chemicals (EDCs)	251
8. The Breeding Life-history Stage	223	7.5. Androgenic Endocrine-disrupting Chemicals (EDCs)	251
8.1. The Developmental Phase	223	7.5.1. Vinclozolin	251
8.1.1. Latitude and photoperiod	223	7.6. Thyroid-disrupting Compounds	251
8.1.2. Sedentary vs. migratory <i>Zonotrichia</i>	224	7.7. Polybrominated Diphenyl Ethers (PBDEs) and Potential Thyroid Disruption	252
8.1.3. Lifecycles of <i>Zonotrichia</i>	224		
8.2. The Termination Phase	225		
8.2.1. Photorefractoriness	225		
8.2.2. The role of the hypothalamic—pituitary—thyroid (HPT) axis	226		
9. The Autumn Migratory Stage	226		
9.1. The Developmental Phase	226		
9.1.1. Photoperiod and refractoriness	226		
9.1.2. Hyperphagia and fattening	226		
9.2. The Mature Capability Phase	227		
9.2.1. Navigation and juvenile birds	227		
9.3. The Termination Phase	228		
9.3.1. Local environmental conditions	228		
10. Conclusions	228		

8. Other Considerations: Effects of Endocrine-Disrupting Chemicals (EDCs) on Immune Function and Stress Responses	253	Acknowledgements	254

Series Preface	xv		
Volume Preface	xvii		
Contributors	xix		
1. Sexual Differentiation of the Mammalian Brain	1		
1. Introduction	1		
2. Historical Overview	2		
2.1. Phoenix, Goy, Gerall, and Young: 1959	2		
2.2. Modern Views—Where Science and Society Collide	2		
3. The Organizational/Activational Hypothesis of Sexual Differentiation	3		
3.1. Basic Principles of Hormone Action	3		
3.2. Sensitive Periods	5		
3.3. The Role of Aromatization	5		
3.4. Masculinization, Feminization, and Defeminization	6		
3.5. Brain vs. Behavior	6		
3.6. Challenges to the Dogma	8		
4. Advances in Mechanisms	10		
4.1. Cell Birth and Cell Death	10		
4.2. Old Players with New Roles	11		
4.3. New Players with Old Roles	12		
4.4. The Need for and Consequences of Cell-to-cell Communication	14		
5. Summary and Future Directions	16		
References	17		
2. Neuroendocrine Control of Gonadotropins in Mammals	25		
1. Introduction to Gonadotropins	25		
1.1. The Discovery of Hypothalamic Releasing Factors	25		
1.2. The Organization of the Mammalian Pituitary Gland	26		
2. Gonadotropin-releasing Hormone (GnRH)	27		
2.1. The Development of Gonadotropin-releasing Hormone (GnRH) Neurons: Cell Fate Specification	28		
2.2. Development of Gonadotropin-releasing Hormone (GnRH) Neurons: Neuronal Migration	29		
2.3. Development of Gonadotropin-releasing Hormone (GnRH) Neurons: Axonal Targeting	30		
2.4. Gonadotropin-releasing Hormone (GnRH) Neurons are Anatomically Unique	30		
2.5. Gonadotropin-releasing Hormone (GnRH) is Structurally Conserved	31		
2.6. Gonadotropin-releasing Hormone (GnRH) Release is Pulsatile	33		
3. Gonadotropin-releasing Hormone (GnRH) Receptors	34		
3.1. Gonadotropin-releasing Hormone (GnRH) Receptor Regulation in Gonadotropes	35		
3.2. GnRH-I Receptor Signaling Pathways	36		
3.3. Gonadotropin-releasing Hormone (GnRH) Pulsatility Differentially Regulates Gonadotropins (GTHs)	36		
4. Conclusions	37		
References	38		
3. Endocrine and Paracrine Regulation of Mammalian Spermatogenesis	45		
1. Overview of Spermatogenesis	45		
2. Regulation of Stem Spermatogonia Via Growth Factors and Paracrine Interactions	46		
2.1. Characteristics of Stem Spermatogonia	46		
2.2. Replication and Differentiation of Stem Spermatogonia in their Niche	46		
2.3. Glial-derived Neurotrophic Factor (GDNF) and Other Growth Factors in the Stem Spermatogonia Niche	47		
2.4. Regulation of Sertoli Cell Function by Differentiated Spermatogenetic Cells and the Implications of this Regulation for the Function of the Stem Spermatogonial Niche	48		
3. Endocrine Regulation of Spermatogenesis	49		
3.1. Leydig Cells and Testosterone (T) Production	49		

3.2. Mechanism(s) by which Testosterone (T) Acts to Drive Spermatogenesis: The Role of Androgen Receptors (ARs)	49	2. The Menstrual Cycle, Luteolysis, and Pregnancy in Primates (<i>Homo Sapiens</i> and <i>Macaca Mulatta</i>)	77
3.3. Androgen Receptor (AR) Expression is Stage-specific and Specific Stages of Spermatogenesis are Androgen-dependent	50	2.1. The Menstrual Cycle	77
3.4. Testosterone (T) and Spermatogenesis	51	2.2. Pregnancy	77
3.5. Male Hormonal Contraception	52	3. Estrous Cycles, Luteolysis, Pseudopregnancy, Delayed Implantation, and Pregnancy in Subprimate Mammals	81
3.6. Male Infertility	52	3.1. Rodents: Rat (<i>Rattus norvegicus</i>), Mouse (<i>Mus musculus</i>), Guinea Pig (<i>Cavia porcellus</i>)	81
4. Future Directions	52	3.1.1. The estrous cycle and luteolysis	81
Acknowledgments	53	3.1.2. Pseudopregnancy and pregnancy	81
References	53	3.1.3. Rodent decidual prolactin (PRL)-like proteins and placental lactogens	82
4. The Endocrinology of the Mammalian Ovary	59	3.2. Ruminants	82
1. Introduction	59	3.2.1. The estrous cycle and luteolysis	82
2. Embryogenesis of the Ovary	59	3.2.2. Pregnancy	83
2.1. Oogenesis	60	3.2.3. Cows	84
2.2. Folliculogenesis	60	3.2.4. Goats	84
2.2.1. Ovarian steroidogenesis	62	3.2.5. Sheep	84
2.3. Puberty	63	3.3. Swine (<i>Sus domestica</i>)	84
3. The Ovarian Cycle	63	3.3.1. The estrous cycle and luteolysis	84
3.1. The Follicular Phase of the Ovarian Cycle	64	3.3.2. Pregnancy	85
3.2. Ovulation	64	3.4. Horses (<i>Equus ferus caballus</i>)	87
3.3. The Luteal Phase of the Ovarian Cycle	65	3.4.1. The estrous cycle and luteolysis	87
4. Ovarian Lifespan and Reproductive Aging	66	3.4.2. Pregnancy	87
5. Ovarian Events and Reproductive Cycles of Selected Mammals	66	3.5. Rabbits (<i>Oryctolagus cuniculus</i>)	87
5.1. The Four-day-cycling Rat	67	3.5.1. The ovarian cycle and estrus	87
5.2. The Ewe	67	3.5.2. Pregnancy	88
5.3. Women	68	3.6. Domestic Cats (<i>Felis catus</i>)	89
5.4. The Elephant	69	3.6.1. The estrous cycle	89
6. Future Research Needs	69	3.6.2. Pregnancy	89
References	70	3.7. Domestic Dogs (<i>Canis lupus familiaris</i>)	90
		3.7.1. The ovarian cycle and estrus	90
		3.7.2. Pregnancy	90
		4. Summary and Conclusions	90
		5. Future Research	91
		References	92
5. Hormones and Pregnancy in Eutherian Mammals	73	6. The Comparative Physiology of Parturition in Mammals: Hormones and Parturition in Mammals	95
1. Introduction	73	1. Introduction	95
1.1. Corpus Luteum (CL) Formation and Regression	73	2. What Determines Gestation Length?	97
1.2. Pregnancy Recognition Signals for Maintenance of the Corpus Luteum (CL)	74	3. How are Fetal Maturation and Parturition Synchronized?	100
1.3. Luteinizing Hormone (LH), Chorionic Gonadotropin (CG), and their Receptor (LHCGR)	74	4. How Does the Fetus Signal the Initiation of Labor?	101
1.4. Progesterone (P ₄) and Progesterone Receptors (PRs)	75	4.1. A More Complicated Case: The Corpus Luteum-dependent Species	101
1.5. Relaxin (RLX)	76		
1.6. Chorionic Somatomammotropin Hormone (CSH1)	77		

4.2. The Role of the Fetal Hypothalamus– pituitary–adrenal (HPA) Axis in the Initiation of Parturition	102	7. Relevant Neurotransmitters and Neuropeptides	147
4.3. Signals from the Fetal Lungs	104	7.1. Females	147
5. How are the Uterotonic Mechanisms Activated?	104	7.1.1. Norepinephrine (NE)	148
5.1. The Sex Steroids: Progesterone (P ₄) and Estrogens	104	7.1.2. Acetylcholine (ACh)	149
5.2. Inflammatory Mediators: Prostaglandins (PGs) and Cytokines	108	7.1.3. Gonadotropin-releasing hormone (GnRH)	149
5.3. Oxytocin (OXY)	110	7.1.4. Opiates	149
5.4. Electrical Conductivity of the Myometrium	110	7.2. Neurotransmitters that Act in Both Sexes	149
6. Conclusions	111	7.2.1. Dopamine (DA)	150
References	112	7.2.2. Serotonin (5-HT)	150
		7.2.3. Oxytocin (OXY)	151
		7.2.4. α -Melanocyte-stimulating hormone (MSH, or melanotropin)	152
7. Stress and Reproduction in Mammals	117	8. Gonad-independent Sexual Behavior	152
1. Introduction	117	9. Genetics of Sexual Behavior	153
2. Effects of Food Restriction	119	10. Neuroendocrinology of Human Sexual Behavior	156
3. Effects of Stress on Immunity and Reproduction	121	10.1. Men	156
4. Effects of Other Stressors	124	10.2. Women	157
4.1. Females	124	11. Summary	158
4.2. Males	125	References	159
5. Role of HPA Activation (Glucocorticoids and CRH)	126		
6. Implications for Wildlife	128	9. Pheromones and Reproduction in Mammals	175
7. Conclusions	129	1. Introduction	175
Acknowledgements	130	1.1. Scope	175
References	130	1.2. Pheromones	175
		1.3. Chemosensory Systems	176
		1.4. Organization	176
8. Behavioral Neuroendocrinology of Reproduction in Mammals	139	2. Social Odors and Physiology	176
1. Introduction	139	2.1. Responses by Females	176
2. Description of Male and Female Sexual Behavior (MSB/FSB)	139	2.1.1. Puberty acceleration	177
3. The Role of Gonadal Steroids in Sexual Behavior	141	2.1.2. Puberty delay	177
4. Neural Circuitry Regulating Sexual Behavior	142	2.1.3. Inhibition of ovarian cyclicity	178
4.1. Chemosensory Inputs to Male Sexual Behavior (MSB)	142	2.1.4. Facilitation of ovarian cyclicity	178
4.2. Neural Circuitry Regulating Lordosis	142	2.1.5. Ovarian synchrony	179
5. Steroid Receptors and Sexual Behavior	144	2.1.6. Pregnancy blockage	179
5.1. Males	144	2.2. Responses by Males	180
5.2. Females	145	2.2.1. Reproductive development	180
6. Ligand-independent Activation of Steroid Receptors	146	2.2.2. Sperm allocation	180
		2.2.3. Hormone release	180
		3. Social Odors and Behavior	181
		3.1. Responses by Females	181
		3.1.1. Attraction and investigation	181
		3.1.2. Scent marking	182
		3.2. Responses by Males	182
