|                                                    |          |
|----------------------------------------------------|----------|
| Preface                                            | xvii     |
| Acknowledgments                                    | xix      |
| <b>1 Uniform Random Number Generation</b>          | <b>1</b> |
| 1.1 Random Numbers                                 | 1        |
| 1.1.1 Properties of a Good Random Number Generator | 2        |
| 1.1.2 Choosing a Good Random Number Generator      | 3        |
| 1.2 Generators Based on Linear Recurrences         | 4        |
| 1.2.1 Linear Congruential Generators               | 4        |
| 1.2.2 Multiple-Recursive Generators                | 5        |
| 1.2.3 Matrix Congruential Generators               | 6        |
| 1.2.4 Modulo 2 Linear Generators                   | 6        |
| 1.3 Combined Generators                            | 8        |
| 1.4 Other Generators                               | 10       |
| 1.5 Tests for Random Number Generators             | 11       |
| 1.5.1 Spectral Test                                | 12       |
| 1.5.2 Empirical Tests                              | 14       |
| References                                         | 21       |

|          |                                                                                     |           |
|----------|-------------------------------------------------------------------------------------|-----------|
| <b>2</b> | <b>Quasirandom Number Generation</b>                                                | <b>25</b> |
| 2.1      | Multidimensional Integration                                                        | 25        |
| 2.2      | Van der Corput and Digital Sequences                                                | 27        |
| 2.3      | Halton Sequences                                                                    | 29        |
| 2.4      | Faure Sequences                                                                     | 31        |
| 2.5      | Sobol' Sequences                                                                    | 33        |
| 2.6      | Lattice Methods                                                                     | 36        |
| 2.7      | Randomization and Scrambling                                                        | 38        |
|          | References                                                                          | 40        |
| <b>3</b> | <b>Random Variable Generation</b>                                                   | <b>43</b> |
