

# How and Why Species Multiply

*The Radiation of Darwin's Finches*

PETER R. GRANT AND B. ROSEMARY GRANT

# *Contents*

<i>List of Illustrations</i>	<i>xi</i>
<i>List of Tables</i>	<i>xv</i>
<i>Preface</i>	<i>xvii</i>

## **ONE**

<b>The Biodiversity Problem and Darwin's Finches</b>	1
Biodiversity	1
The Choice of Organisms	2
Darwin's Finches	3
Diversity of Darwin's Finch Species	5
Species and Populations	8
Overview of the Book	11

## **TWO**

<b>Origins and History</b>	13
Introduction	13
Phylogeny	14
Ancestors	16
The Time of Arrival	16
Colonization	17
The Ecological Theater	18
A Change of Scenery	21
The Evolutionary Play	22
Recent History	22
Summary	25

## **THREE**

<b>Modes of Speciation</b>	26
The Formation of New Species	26
Two Groups from One	27
Divergence in Allopatry	28

## CONTENTS

Coexistence in Sympatry	29
Sympatric Speciation	30
Parapatric Speciation	31
Testing the Models	33
Summary	33
<b>FOUR</b>	
<b>Colonization of an Island</b>	35
Speciation: The Initial Split	35
Establishment of a New Population	35
Founder Effects: Expectations from Theory	36
A Colonization Event	38
Inbreeding	39
Recurrent Immigration	39
An Alternative Phenology of Founder Effects	42
CONCLUSION	42
Species Elsewhere	44
Summary	45
<b>FIVE</b>	
<b>Natural Selection, Adaptation, and Evolution</b>	46
Adaptation	46
Beak Sizes and Diets	47
Adaptive Evolution When the Environment Changes	50
Natural Selection	52
Evolution	54
Oscillating Directional Selection	55
Extrapolating from Short to Long Term	58
The Sources of Variation	58
How Beaks Are Formed	59
DEPTH AND WIDTH	59
LENGTH	62
Summary	63
<b>SIX</b>	
<b>Ecological Interactions</b>	65
Introduction	65
Competition	66

## CONTENTS

Patterns of Coexistence	66
DIETS INFERRED FROM BEAKS	67
INTERPRETING THE PATTERNS	67
Character Displacement and Release	68
CHARACTER DISPLACEMENT OBSERVED	68
THE COMPETITIVE ROLE OF <i>G. Magnirostris</i>	69
SELECTION UNDER CONTRASTING CONDITIONS	73
EVOLUTION OF CHARACTER DISPLACEMENT	73
Summary	75
<b>SEVEN</b>	
<b>Reproductive Isolation</b>	76
Pre-mating Barrier to Interbreeding	76
Factors Involved in the Discrimination between Species	76
BEAKS	77
SONG	77
Learning	79
Song Differences between Species	80
Song Divergence in Allopatry	81
ADAPTATION TO HABITAT	83
CHANGE OF SONGS AS A CONSEQUENCE OF MORPHOLOGICAL DIVERGENCE	84
THE ROLE OF CHANCE	86
Simulating Secondary Contact	88
Summary	91
<b>EIGHT</b>	
<b>Hybridization</b>	92
Introduction	92
Hybridization	92
Why Hybridization Occurs	93
When Hybridization Does Not Occur	96
Hybrid Fitness	97
Introgression on <i>Daphne Major</i>	100
Introgression in the Archipelago	103
Reinforcement	103
Reproductive Character Displacement	105

## CONTENTS

Evolutionary Significance of Introgression	106
Summary	107
<b>NINE</b>	
<b>Species and Speciation</b>	108
Introduction	108
From Process to Product: What Is a Species?	109
A Working Definition	110
How Many Species of Darwin's Finches?	111
<i>Certhidea olivacea</i> : ONE SPECIES OR TWO?	112
<i>Geospiza difficilis</i> : ONE SPECIES OR THREE?	113
From Product Back to Process	114
Fission and Fusion	116
Summary	119
<b>TEN</b>	
<b>Reconstructing the Radiation of Darwin's Finches</b>	120
Introduction	120
The Shape of the Radiation	121
Speciation and Extinction	123
SPECIATION	125
EXTINCTION	126
IMPLICATIONS FOR PHYLOGENY	127
Adaptive Landscape	128
A Pattern of Ecological Segregation	133
Specialization	134
The Buildup of Complex Communities	134
Summary	135
<b>ELEVEN</b>	
<b>Facilitators of Adaptive Radiation</b>	137
Introduction	137
Environmental Opportunity	138
Geographical Suitability	139
Ecological Opportunity	140
High Diversification Potential	142
Behavioral Flexibility	142

## CONTENTS

Introgressive Hybridization	145
HYBRIDIZATION AND ANIMAL BREEDING	146
ENVIRONMENTAL CONDITIONS CONDUCIVE TO INTROGRESSION	146
Finches versus Mockingbirds	148
Summary	150
 <b>TWELVE</b>	
<b>The Life History of Adaptive Radiations</b>	152
Introduction	152
The First Stage of Adaptive Radiation	153
The Second Stage of Adaptive Radiation	154
Haldane's Rule	157
The Third Stage of Adaptive Radiation	158
Synthesis	160
Summary	162
 <b>THIRTEEN</b>	
<b>Summary of the Darwin's Finch Radiation</b>	163
What Happened and Why	163
What Is Missing?	165
Epilogue	166
 <i>Glossary</i>	 168
<i>References</i>	175
<i>Author Index</i>	201
<i>Subject Index</i>	210

## *Illustrations*

Color Plates (following page 122)

1. Relationships among Darwin's finch species based on microsatellite DNA
2. Darwin's finch species
3. *Melanospiza richardsoni*, *Tiaris olivacea*, and *Certhidea olivacea*
4. Warbler finches from four islands
5. Volcanic activity on Isabela island; and Daphne Major island
6. Cocos island and its finch
7. Four Galápagos habitats at different elevations
8. Capturing, measuring, and banding birds
9. Measurements of birds
10. The four species of Darwin's finches on Daphne Major island
11. Large tree finches, differing in beak size and shape on two islands
12. Habitats of the sharp-beaked ground finch, *Geospiza difficilis*
13. *G. difficilis* on a high island (Pinta) and a low island (Genovesa)
14. Unusual feeding habits of the sharp-beaked ground finch, *Geospiza difficilis*
15. Plants that produce small seeds
16. Feeding of medium ground finches on Daphne Major island
17. Effects of a drought on Daphne Major vegetation
18. *Tribulus cistoides*
19. Effects of El Niño on Daphne Major vegetation
20. The large cactus finch in the presence and absence of the large ground finch
21. Feeding of large ground finches on Daphne Major island
22. Cactus fruits exploited by cactus finches
23. Cactus feeding by cactus finches on Daphne Major island

## ILLUSTRATIONS

24. Character displacement of <i>G. fortis</i> in the presence of <i>G. magnirostris</i>	
25. Dead finches on Daphne Major island	
26. Tests of discrimination by appearance and by song	
27. A probable hybrid on Genovesa	
28. Hybrids and backcrosses on Daphne Major island	
29. Tool-using woodpecker finch, and a tick-eating small ground finch	
30. Four allopatric species of Galápagos mockingbirds	
31. The vangids of Madagascar and the honeycreeper finches of Hawaii	
Figures	
1.1 Map of the Galápagos islands	4
1.2 Adaptive radiation of Darwin's finches	6
1.3 Morphological variation of <i>Geospiza fuliginosa</i> , <i>G. fortis</i> , and <i>G. magnirostris</i>	10
2.1 Relationships among Darwin's finch species constructed with microsatellite DNA	15
2.2 Increase in number of islands over the last 3 million years	19
2.3 Global climate change and Pacific temperatures over the last 3 million years	20
2.4 Parallel increase in number of islands and number of finch species	23
2.5 Altitudinal zonation of habitats	24
3.1 Allopatric speciation, in three stages	28
4.1 Two versions of the founder effects model of speciation	37
4.2 Numbers of pairs of <i>Geospiza magnirostris</i> on Daphne Major island	40
4.3 Inbreeding depression in the 1991 cohort of <i>G. magnirostris</i>	40
4.4 Changes in genetic diversity of <i>G. magnirostris</i>	41
4.5 Average beak size in the population of <i>G. magnirostris</i> during fluctuations in population numbers	43
5.1 An analogy between beak shapes and pliers	48
5.2 Seed sizes that can be cracked in relation to beak depth	49
5.3 <i>Geospiza difficilis</i> populations in the Galápagos archipelago	50
5.4 Phylogeny of the sharp-beaked ground finch, <i>Geospiza difficilis</i>	51
5.5 Annual rainfall on Daphne Major island	52

ILLUSTRATIONS

5.6	Changes in beak depth in the medium ground finch, <i>G. fortis</i> , as a result of natural selection	53
5.7	The relationship between parents and offspring in beak depth	54
5.8	Evolutionary change in beak depth in the population of <i>Geospiza fortis</i>	56
5.9	Morphological changes in the populations of <i>Geospiza fortis</i> and <i>G. scandens</i>	57
5.10	Schematic diagram of beak development	60
5.11	Different expression of the <i>Bmp4</i> and <i>CaM</i> genes in species of ground finches	61
5.12	Summary of effects of two genes, <i>Bmp4</i> and <i>CaM</i> , on developing finch beaks	63
6.1	The long-term morphological trajectory of <i>G. fortis</i> on Daphne Major island	70
6.2	Numbers of <i>G. magnirostris</i> and <i>G. fortis</i> before, during, and after a crash	70
6.3	Diets of three ground finch species in three categories of seed size	72
6.4	Observed evolutionary responses to natural selection in <i>G. fortis</i> and <i>G. scandens</i> compared with predicted values	74
7.1	Discrimination by ground finch species between stuffed specimens	78
7.2	Discrimination by male ground finches between local conspecific and heterospecific song	79
7.3	A pedigree of songs sung by <i>G. fortis</i> males on Daphne Major island	82
7.4	Lifetime constancy of the single song sung by <i>G. fortis</i> males	83
7.5	Similarity of <i>G. scandens</i> songs produced by father and son	84
7.6	Advertising songs of <i>G. difficilis</i> on Pinta, Wolf, Darwin, and Genovesa	85
7.7	Similarity in the songs of different species	87
7.8	Discrimination by ground finch species between residents and immigrants	89
7.9	The likelihood of a resident species breeding with an immigrant in relation to the difference in their morphology	90
8.1	Miscopying of <i>G. magnirostris</i> songs by <i>G. fortis</i> on Daphne Major island	95

ILLUSTRATIONS

8.2 Diets of ground finch species, hybrids, and two generations of backcrosses	98
8.3 Change in the fate of hybrids on Daphne Major island after the 1982–83 El Niño	99
8.4 Fitness of hybrids and backcrosses in relation to the parental species	100
8.5 Backcrossing of <i>G. fortis</i> and <i>G. scandens</i> according to paternal song type	101
8.6 Genetic and morphological convergence of <i>G. fortis</i> and <i>G. scandens</i>	102
8.7 Introgressive hybridization between closely related pairs of ground finches and tree finches in the Galápagos archipelago	104
8.8 Increase in microsatellite heterozygosity and beak shape variance in <i>G. scandens</i>	106
9.1 A simple representation of speciation	109
9.2 Oscillating divergence and convergence during speciation	116
9.3 Beak sizes of <i>G. fortis</i> and <i>G. magnirostris</i> on Santa Cruz, San Cristóbal and Marchena	118
10.1 Morphological diversity among Darwin's finch species	122
10.2 Accumulation of species through time.	124
10.3 Phylogeny with hybridization and extinction	129
10.4 An adaptive landscape	130
10.5 An adaptive landscape for finches	132
11.1 Morphological divergence among relatives of Darwin's finches	143
11.2 Changes in the center of the Galápagos archipelago in the last 22,000 years	147
12.1 A model of the evolution of genetic incompatibilities as a function of time	156

## *Tables*

1.1 Darwin's finch species	5
1.2 Finch distributions on the 18 major islands	7
6.1 Coefficients associated with two episodes of natural selection	71
