

Introduction to Geomicrobiology

Kurt Konhauser

Contents

- Preface, ix
- 1 Microbial properties and diversity, 1**
- 1.1 Classification of life, 1
 - 1.2 Physical properties of microorganisms, 5
 - 1.2.1 Prokaryotes, 5
 - 1.2.2 Eukaryotes, 8
 - 1.3 Requirements for growth, 10
 - 1.3.1 Physical requirements, 10
 - 1.3.2 Chemical requirements, 11
 - 1.3.3 Growth rates, 17
 - 1.4 Microbial diversity, 18
 - 1.5 Life in extreme environments, 22
 - 1.5.1 Hydrothermal systems, 23
 - 1.5.2 Polar environments, 26
 - 1.5.3 Acid environments, 28
 - 1.5.4 Hypersaline and alkaline environments, 29
 - 1.5.5 Deep-subsurface environments, 30
 - 1.5.6 Life on other planets, 32
 - 1.5.7 Panspermia, 34
 - 1.6 Summary, 35
- 2 Microbial metabolism, 36**
- 2.1 Bioenergetics, 36
 - 2.1.1 Enzymes, 36
 - 2.1.2 Oxidation-reduction, 37
 - 2.1.3 ATP generation, 42
 - 2.1.4 Chemiosmosis, 43
 - 2.2 Photosynthesis, 47
 - 2.2.1 Pigments, 47
 - 2.2.2 The light reactions – anoxygenic photosynthesis, 49
 - 2.2.3 Classification of anoxygenic photosynthetic bacteria, 51
 - 2.2.4 The light reactions – oxygenic photosynthesis, 54
 - 2.2.5 The dark reactions, 56
 - 2.2.6 Nitrogen fixation, 57
 - 2.3 Catabolic processes, 58
 - 2.3.1 Glycolysis and fermentation, 59
 - 2.3.2 Respiration, 61
 - 2.4 Chemoheterotrophic pathways, 65
 - 2.4.1 Aerobic respiration, 65
 - 2.4.2 Dissimilatory nitrate reduction, 66
 - 2.4.3 Dissimilatory manganese reduction, 67
 - 2.4.4 Dissimilatory iron reduction, 69
 - 2.4.5 Trace metal and metalloid reductions, 72
 - 2.4.6 Dissimilatory sulfate reduction, 74
 - 2.4.7 Methanogenesis and homoacetogenesis, 77
 - 2.5 Chemolithoautotrophic pathways, 79
 - 2.5.1 Hydrogen oxidizers, 79
 - 2.5.2 Homoacetogens and methanogens, 81
 - 2.5.3 Methylophils, 82
 - 2.5.4 Sulfur oxidizers, 84
 - 2.5.5 Iron oxidizers, 86
 - 2.5.6 Manganese oxidizers, 89
 - 2.5.7 Nitrogen oxidizers, 91
 - 2.6 Summary, 92

- 3 Cell surface reactivity and metal sorption, 93
 - 3.1 The cell envelope, 93
 - 3.1.1 Bacterial cell walls, 93
 - 3.1.2 Bacterial surface layers, 97
 - 3.1.3 Archaeal cell walls, 100
 - 3.1.4 Eukaryotic cell walls, 100
 - 3.2 Microbial surface charge, 101
 - 3.2.1 Acid–base chemistry of microbial surfaces, 101
 - 3.2.2 Electrophoretic mobility, 104
 - 3.2.3 Chemical equilibrium models, 105
 - 3.3 Passive metal adsorption, 108
 - 3.3.1 Metal adsorption to bacteria, 108
 - 3.3.2 Metal adsorption to eukaryotes, 111
 - 3.3.3 Metal cation partitioning, 112
 - 3.3.4 Competition with anions, 114
 - 3.4 Active metal adsorption, 114
 - 3.4.1 Surface stability requirements, 115
 - 3.4.2 Metal binding to microbial exudates, 116
 - 3.5 Bacterial metal sorption models, 119
 - 3.5.1 K_d coefficients, 119
 - 3.5.2 Freundlich isotherms, 120
 - 3.5.3 Langmuir isotherms, 121
 - 3.5.4 Surface complexation models (SCM), 122
 - 3.5.5 Does a generalized sorption model exist?, 124
 - 3.6 The microbial role in contaminant mobility, 126
 - 3.6.1 Microbial sorption to solid surfaces, 127
 - 3.6.2 Microbial transport through porous media, 131
 - 3.7 Industrial applications based on microbial surface reactivity, 133
 - 3.7.1 Bioremediation, 133
 - 3.7.2 Biorecovery, 136
 - 3.8 Summary, 138
- 4 Biomineralization, 139
 - 4.1 Biologically induced mineralization, 139
 - 4.1.1 Mineral nucleation and growth, 139
 - 4.1.2 Iron hydroxides, 143
 - 4.1.3 Magnetite, 149
 - 4.1.4 Manganese oxides, 150
 - 4.1.5 Clays, 153
 - 4.1.6 Amorphous silica, 156
 - 4.1.7 Carbonates, 160
 - 4.1.8 Phosphates, 166
 - 4.1.9 Sulfates, 169
 - 4.1.10 Sulfide minerals, 171
 - 4.2 Biologically controlled mineralization, 174
 - 4.2.1 Magnetite, 174
 - 4.2.2 Greigite, 178
 - 4.2.3 Amorphous silica, 179
 - 4.2.4 Calcite, 183
 - 4.3 Fossilization, 185
 - 4.3.1 Silicification, 186
 - 4.3.2 Other authigenic minerals, 189
 - 4.4 Summary, 191
- 5 Microbial weathering, 192
 - 5.1 Mineral dissolution, 192
 - 5.1.1 Reactivity at mineral surfaces, 192
 - 5.1.2 Microbial colonization and organic reactions, 195
 - 5.1.3 Silicate weathering, 200
 - 5.1.4 Carbonate weathering, 205
 - 5.1.5 Soil formation, 206
 - 5.1.6 Weathering and global climate, 209
 - 5.2 Sulfide oxidation, 211
 - 5.2.1 Pyrite oxidation mechanisms, 211
 - 5.2.2 Biological role in pyrite oxidation, 215
 - 5.2.3 Bioleaching, 223
 - 5.2.4 Biooxidation of refractory gold, 229

- 5.3 Microbial corrosion, 230
 - 5.3.1 Chemolithoautotrophs, 231
 - 5.3.2 Chemoheterotrophs, 232
 - 5.3.3 Fungi, 234
- 5.4 Summary, 234
- 6 Microbial zonation, 235
 - 6.1 Microbial mats, 235
 - 6.1.1 Mat development, 236
 - 6.1.2 Photosynthetic mats, 240
 - 6.1.3 Chemolithoautotrophic mats, 246
 - 6.1.4 Biosedimentary structures, 249
 - 6.2 Marine sediments, 259
 - 6.2.1 Organic sedimentation, 260
 - 6.2.2 An overview of sediment diagenesis, 262
 - 6.2.3 Oxidic sediments, 265
 - 6.2.4 Suboxic sediments, 266
 - 6.2.5 Anoxic sediments, 272
 - 6.2.6 Preservation of organic carbon into the sedimentary record, 280
 - 6.2.7 Diagenetic mineralization, 283
 - 6.2.8 Sediment hydrogen concentrations, 287
 - 6.2.9 Problems with the biogeochemical zone scheme, 288
 - 6.3 Summary, 292
- 7 Early microbial life, 293
 - 7.1 The prebiotic Earth, 293
 - 7.1.1 The Hadean environment, 294
 - 7.1.2 Origins of life, 296
 - 7.1.3 Mineral templates, 301
 - 7.2 The first cellular life forms, 305
 - 7.2.1 The chemolithoautotrophs, 305
 - 7.2.2 Deepest-branching *Bacteria* and *Archaea*, 309
 - 7.2.3 The fermenters and initial respirers, 311
 - 7.3 Evolution of photosynthesis, 312
 - 7.3.1 Early phototrophs, 312
 - 7.3.2 Photosynthetic expansion, 319
 - 7.3.3 The cyanobacteria, 323
 - 7.4 Metabolic diversification, 327
 - 7.4.1 Obligately anaerobic respirers, 327
 - 7.4.2 Continental platforms as habitats, 331
 - 7.4.3 Aerobic respiratory pathways, 334
 - 7.5 Earth's oxygenation, 340
 - 7.5.1 The changing Proterozoic environment, 340
 - 7.5.2 Eukaryote evolution, 345
 - 7.6 Summary, 349
- References, 350
- Index, 406
