Algebraic Graph Theory

Morphisms, Monoids and Matrices

De Gruyter

Contents

Preface	v
1 Directed and undirected graphs	1
1.1 Formal description of graphs	1
1.2 Connectedness and equivalence relations	4
1.3 Some special graphs	5
1.4 Homomorphisms	7
1.5 Half-, locally, quasi-strong and metric homomorphisms	11
1.6 The factor graph, congruences, and the Homomorphism Theorem	14
Factor graphs	14
The Homomorphism Theorem	15
1.7 The endomorphism type of a graph	18
1.8 Comments	24
2 Graphs and matrices	26
2.1 Adjacency matrix	26
Isomorphic graphs and the adjacency matrix	28
Components and the adjacency matrix	29
Adjacency list	30
2.2 Incidence matrix	30
2.3 Distances in graphs	31
The adjacency matrix and paths	32
The adjacency matrix, the distance matrix and circuits	33
2.4 Endomorphisms and commuting graphs	34
2.5 The characteristic polynomial and eigenvalues	35
2.6 Circulant graphs	40
2.7 Eigenvalues and the combinatorial structure	43
Cosppectral graphs	43
Eigenvalues, diameter and regularity	44
Automorphisms and eigenvalues	45
2.8 Comments	46
3 Categories and functors	48
3.1 Categories	48
Categories with sets and mappings, I	49
Constructs, and small and large categories	49

	Special objects and morphisms	50
	Categories with sets and mappings, II	51
	Categories with graphs	51
	Other categories	52
3.2	Products & Co.	53
	Coproducts	53
	Products	55
	Tensor products	57
	Categories with sets and mappings, III	58
3.3	Functors	58
	Covariant and contravariant functors	59
	Composition of functors	59
	Special functors – examples	60
	Mor functors	60
	Properties of functors	61
3.4	Comments	63
4	Binary graph operations	64
4.1	Unions	64
	The union	64
	The join	66
	The edge sum	67
4.2	Products	70
	The cross product	71
	The coamalgamated product	72
	The disjunction of graphs	75
4.3	Tensor products and the product in <i>EGra</i>	75
	The box product	76
	The boxcross product	79
	The complete product	79
	Synopsis of the results	80
	Product constructions as functors in one variable	80
4.4	Lexicographic products and the corona	81
	Lexicographic products	81
	The corona	82
4.5	Algebraic properties	83
4.6	Mor constructions	85
	Diamond products	85
	Left inverses for tensor functors	87
	Power products	88
	Left inverses to product functors	89
4.7	Comments	90

5	Line graph and other unary graph operations	91
5.1	Complements, opposite graphs and geometric duals	91
5.2	The line graph	92
	Determinability of G by LG	95
5.3	Spectra of line graphs	97
	Which graphs are line graphs?	99
5.4	The total graph	101
5.5	The tree graph	102
5.6	Comments	103
6	Graphs and vector spaces	104
6.1	Vertex space and edge space	104
	The boundary & Co.	105
	Matrix representation	106
6.2	Cycle spaces, bases & Co.	107
	The cycle space	107
	The cocycle space	109
	Orthogonality	111
	The boundary operator & Co.	112
6.3	Application: MacLane's planarity criterion	113
6.4	Homology of graphs	116
	Exact sequences of vector spaces	116
	Chain complexes and homology groups of graphs	117
6.5	Application: number of spanning trees	119
6.6	Application: electrical networks	123
6.7	Application: squared rectangles	128
6.8	Application: shortest (longest) paths	132
6.9	Comments	135
7	Graphs, groups and monoids	136
7.1	Groups of a graph	136
	Edge group	137
7.2	Asymmetric graphs and rigid graphs	138
7.3	Cayley graphs	144
7.4	Frucht-type results	146
	Frucht's theorem and its generalization for monoids	147
7.5	Graph-theoretic requirements	148
	Smallest graphs for given groups	149
	Additional properties of group-realizing graphs	150
7.6	Transformation monoids and permutation groups	154
7.7	Actions on graphs	156
	Fixed-point-free actions on graphs	156

	Transitive actions on graphs	157
	Regular actions	158
7.8	Comments	160
8	The characteristic polynomial of graphs	161
8.1	Eigenvectors of symmetric matrices	161
	Eigenvalues and connectedness	162
	Regular graphs and eigenvalues	163
8.2	Interpretation of the coefficients of $\text{chapo}(G)$	164
	Interpretation of the coefficients for undirected graphs	166
8.3	Spectra of trees	168
	Recursion formula for trees	168
8.4	The spectral radius of undirected graphs	169
	Subgraphs	169
	Upper bounds	170
	Lower bounds	171
8.5	Spectral determinability	172
	Spectral uniqueness of K_n and $K_{p,q}$	172
8.6	Eigenvalues and group actions	174
	Groups, orbits and eigenvalues	174
8.7	Transitive graphs and eigenvalues	176
	Derogatory graphs	177
	Graphs with Abelian groups	178
8.8	Comments	180
9	Graphs and monoids	181
9.1	Semigroups	181
9.2	End-regular bipartite graphs	185
	Regular endomorphisms and retracts	185
	End-regular and End-orthodox connected bipartite graphs	186
9.3	Locally strong endomorphisms of paths	188
	Undirected paths	188
	Directed paths	191
	Algebraic properties of LEnd	194
9.4	Wreath product of monoids over an act	197
9.5	Structure of the strong monoid	200
	The canonical strong decomposition of G	201
	Decomposition of SEnd	202
	A generalized wreath product with a small category	204
	Cardinality of $\text{SEnd}(G)$	204
9.6	Some algebraic properties of SEnd	205
	Regularity and more for T_A	205

Regularity and more for $\text{SEnd}(G)$	206
9.7 Comments	207
10 Compositions, unretractivities and monoids	208
10.1 Lexicographic products	208
10.2 Unretractivities and lexicographic products	210
10.3 Monoids and lexicographic products	214
10.4 The union and the join	217
The sum of monoids	217
The sum of endomorphism monoids	218
Unretractivities	219
10.5 The box product and the cross product	221
Unretractivities	222
The product of endomorphism monoids	223
10.6 Comments	224
11 Cayley graphs of semigroups	225
11.1 The Cay functor	225
Reflection and preservation of morphisms	227
Does Cay produce strong homomorphisms?	228
11.2 Products and equalizers	229
Categorical products	229
Equalizers	231
Other product constructions	232
11.3 Cayley graphs of right and left groups	234
11.4 Cayley graphs of strong semilattices of semigroups	237
11.5 Application: strong semilattices of (right or left) groups	240
11.6 Comments	244
12 Vertex transitive Cayley graphs	245
12.1 Aut-vertex transitivity	245
12.2 Application to strong semilattices of right groups	247
$\text{ColAut}(S, C)$ -vertex transitivity	249
$\text{Aut}(S, C)$ -vertex transitivity	250
12.3 Application to strong semilattices of left groups	253
Application to strong semilattices of groups	256
12.4 $\text{End}'(S, C)$ -vertex transitive Cayley graphs	256
12.5 Comments	260
13 Embeddings of Cayley graphs – genus of semigroups	261
13.1 The genus of a group	261
13.2 Toroidal right groups	265

13.3 The genus of $(A \times R_r)$	270
Cayley graphs of $A \times R_4$	270
Constructions of Cayley graphs for $A \times R_2$ and $A \times R_3$	270
13.4 Non-planar Clifford semigroups	275
13.5 Planar Clifford semigroups	279
13.6 Comments	284
Bibliography	285
Index	301
Index of symbols	307
