

# Introduction to Computational Chemistry

Third Edition

*Frank Jensen*

*Department of Chemistry, Aarhus University, Denmark*

**WILEY**

## Contents

|   |            |
|---|------------|
| Preface to the First Edition  | <i>xv</i>  |
| Preface to the Second Edition   | <i>xix</i> |
| Preface to the Third Edition  | <i>xxi</i> |
| <b>1 Introduction</b>   | <b>1</b>   |
| 1.1 Fundamental Issues  | 2          |
| 1.2 Describing the System   | 3          |
| 1.3 Fundamental Forces  | 3          |
| 1.4 The Dynamical Equation  | 5          |
| 1.5 Solving the Dynamical Equation  | 7          |
| 1.6 Separation of Variables   | 8          |
| 1.6.1 Separating Space and Time Variables                                     | 9          |
| 1.6.2 Separating Nuclear and Electronic Variables                             | 9          |
| 1.6.3 Separating Variables in General   | 10         |
| 1.7 Classical Mechanics   | 11         |
| 1.7.1 The Sun–Earth System  | 11         |
| 1.7.2 The Solar System  | 12         |
| 1.8 Quantum Mechanics   | 13         |
| 1.8.1 A Hydrogen-Like Atom  | 13         |
| 1.8.2 The Helium Atom   | 16         |
| 1.9 Chemistry   | 18         |
| References  | 19         |
| <b>2 Force Field Methods</b>  | <b>20</b>  |
| 2.1 Introduction  | 20         |
| 2.2 The Force Field Energy  | 21         |
| 2.2.1 The Stretch Energy  | 23         |
| 2.2.2 The Bending Energy  | 25         |
| 2.2.3 The Out-of-Plane Bending Energy   | 28         |
| 2.2.4 The Torsional Energy  | 28         |
| 2.2.5 The van der Waals energy  | 32         |
| 2.2.6 The Electrostatic Energy: Atomic Charges                                | 37         |
| 2.2.7 The Electrostatic Energy: Atomic Multipoles                             | 41         |
| 2.2.8 The Electrostatic Energy: Polarizability and Charge Penetration Effects | 42         |

|          |   |            |
|----------|---|------------|
| 2.2.9    | Cross Terms   | 48         |
| 2.2.10   | Small Rings and Conjugated Systems  | 49         |
| 2.2.11   | Comparing Energies of Structurally Different Molecules                            | 51         |
| 2.3      | Force Field Parameterization  | 53         |
| 2.3.1    | Parameter Reductions in Force Fields  | 58         |
| 2.3.2    | Force Fields for Metal Coordination Compounds                                     | 59         |
| 2.3.3    | Universal Force Fields  | 62         |
| 2.4      | Differences in Atomistic Force Fields   | 62         |
| 2.5      | Water Models  | 66         |
| 2.6      | Coarse Grained Force Fields   | 67         |
| 2.7      | Computational Considerations  | 69         |
| 2.8      | Validation of Force Fields  | 71         |
| 2.9      | Practical Considerations  | 73         |
| 2.10     | Advantages and Limitations of Force Field Methods                                 | 73         |
| 2.11     | Transition Structure Modeling   | 74         |
| 2.11.1   | Modeling the TS as a Minimum Energy Structure                                     | 74         |
| 2.11.2   | Modeling the TS as a Minimum Energy Structure on the Reactant/Product Energy Seam | 75         |
| 2.11.3   | Modeling the Reactive Energy Surface by Interacting Force Field Functions         | 76         |
| 2.11.4   | Reactive Force Fields   | 77         |
| 2.12     | Hybrid Force Field Electronic Structure Methods                                   | 78         |
|          | References  | 82         |
| <b>3</b> | <b>Hartree–Fock Theory</b>  | <b>88</b>  |
| 3.1      | The Adiabatic and Born–Oppenheimer Approximations                                 | 90         |
| 3.2      | Hartree–Fock Theory   | 94         |
| 3.3      | The Energy of a Slater Determinant  | 95         |
| 3.4      | Koopmans’ Theorem   | 100        |
| 3.5      | The Basis Set Approximation   | 101        |
| 3.6      | An Alternative Formulation of the Variational Problem                             | 105        |
| 3.7      | Restricted and Unrestricted Hartree–Fock  | 106        |
| 3.8      | SCF Techniques  | 108        |
| 3.8.1    | SCF Convergence   | 108        |
| 3.8.2    | Use of Symmetry   | 110        |
| 3.8.3    | Ensuring that the HF Energy Is a Minimum, and the Correct Minimum                 | 111        |
| 3.8.4    | Initial Guess Orbitals  | 113        |
| 3.8.5    | Direct SCF  | 113        |
| 3.8.6    | Reduced Scaling Techniques  | 116        |
| 3.8.7    | Reduced Prefactor Methods   | 117        |
| 3.9      | Periodic Systems  | 119        |
|          | References  | 121        |
| <b>4</b> | <b>Electron Correlation Methods</b>   | <b>124</b> |
| 4.1      | Excited Slater Determinants   | 125        |
| 4.2      | Configuration Interaction   | 128        |
| 4.2.1    | CI Matrix Elements  | 129        |
| 4.2.2    | Size of the CI Matrix   | 131        |

|          |   |            |
|----------|---|------------|
| 4.2.3    | Truncated CI Methods  | 133        |
| 4.2.4    | Direct CI Methods   | 134        |
| 4.3      | Illustrating how CI Accounts for Electron Correlation, and the RHF Dissociation Problem | 135        |
| 4.4      | The UHF Dissociation and the Spin Contamination Problem                                 | 138        |
| 4.5      | Size Consistency and Size Extensivity   | 142        |
| 4.6      | Multiconfiguration Self-Consistent Field  | 143        |
| 4.7      | Multireference Configuration Interaction  | 148        |
| 4.8      | Many-Body Perturbation Theory   | 148        |
| 4.8.1    | Møller–Plesset Perturbation Theory  | 151        |
| 4.8.2    | Unrestricted and Projected Møller–Plesset Methods                                       | 156        |
| 4.9      | Coupled Cluster   | 157        |
| 4.9.1    | Truncated coupled cluster methods   | 160        |
| 4.10     | Connections between Coupled Cluster, Configuration Interaction and Perturbation Theory  | 162        |
| 4.10.1   | Illustrating Correlation Methods for the Beryllium Atom                                 | 165        |
| 4.11     | Methods Involving the Interelectronic Distance  | 166        |
| 4.12     | Techniques for Improving the Computational Efficiency                                   | 169        |
| 4.12.1   | Direct Methods  | 170        |
| 4.12.2   | Localized Orbital Methods   | 172        |
| 4.12.3   | Fragment-Based Methods  | 173        |
| 4.12.4   | Tensor Decomposition Methods  | 173        |
| 4.13     | Summary of Electron Correlation Methods   | 174        |
| 4.14     | Excited States  | 176        |
| 4.14.1   | Excited State Analysis  | 181        |
| 4.15     | Quantum Monte Carlo Methods   | 183        |
|          | References  | 185        |
| <b>5</b> | <b>Basis Sets</b>   | <b>188</b> |
| 5.1      | Slater- and Gaussian-Type Orbitals  | 189        |
| 5.2      | Classification of Basis Sets  | 190        |
| 5.3      | Construction of Basis Sets  | 194        |
| 5.3.1    | Exponents of Primitive Functions  | 194        |
| 5.3.2    | Parameterized Exponent Basis Sets   | 195        |
| 5.3.3    | Basis Set Contraction   | 196        |
| 5.3.4    | Basis Set Augmentation  | 199        |
| 5.4      | Examples of Standard Basis Sets   | 200        |
| 5.4.1    | Pople Style Basis Sets  | 200        |
| 5.4.2    | Dunning–Huzinaga Basis Sets   | 202        |
| 5.4.3    | Karlsruhe-Type Basis Sets   | 203        |
| 5.4.4    | Atomic Natural Orbital Basis Sets   | 203        |
| 5.4.5    | Correlation Consistent Basis Sets   | 204        |
| 5.4.6    | Polarization Consistent Basis Sets  | 205        |
| 5.4.7    | Correlation Consistent F12 Basis Sets   | 206        |
| 5.4.8    | Relativistic Basis Sets   | 207        |
| 5.4.9    | Property Optimized Basis Sets   | 207        |
| 5.5      | Plane Wave Basis Functions  | 208        |

|          |   |            |
|----------|---|------------|
| 5.6      | Grid and Wavelet Basis Sets   | 210        |
| 5.7      | Fitting Basis Sets  | 211        |
| 5.8      | Computational Issues  | 211        |
| 5.9      | Basis Set Extrapolation   | 212        |
| 5.10     | Composite Extrapolation Procedures                                  | 215        |
|          | 5.10.1 Gaussian-n Models  | 216        |
|          | 5.10.2 Complete Basis Set Models                                    | 217        |
|          | 5.10.3 Weizmann-n Models  | 219        |
|          | 5.10.4 Other Composite Models                                       | 221        |
| 5.11     | Isogyric and Isodesmic Reactions                                    | 222        |
