Contents

Preface	xiii
About the Author	xv
1. DNA Methylation – Introduction	1
1.1 Epigenetics	1
1.2 Histone Modifications	2
1.3 DNA Methylation	3
1.4 Methyl-Binding Domain Proteins	4
1.5 DNA Demethylation	5
1.6 DNA Hydroxymethylation	5
1.7 Differentially Methylated Regions	5
1.8 Nutriepigenomics	6
References	6
2. DNA Methylation and Epigenetic Biomarkers in Cancer	9
2.1 Introduction	10
2.2 Cancerogenesis	11
2.3 Epimutations in Cancer	12
2.4 Conclusion	22
References	23
3. DNA Methylation and Epigenetic Biomarkers in Non-Neoplastic Diseases	29
3.1 Introduction	30
3.2 Autoimmunity	30
3.3 Metabolic Diseases	34
3.4 Developmental Diseases	36
3.5 Psychiatric Diseases	37
3.6 Conclusion	38
References	40
4. DNA Methylation and Environmental Factors	45
4.1 Introduction	46
4.2 Impact of the Environment in Early Life	46

4.3	Nutritional Factors	50
4.4	Adverse Environmental Factors	52
4.5	Immune Activation	56
4.6	Maternal Mood and Experience in Early Life	58
4.7	Physical Exercise	59
4.8	Conclusion	60
	References	60
5.	DNA Methylation and Epidemiology	67
5.1	Introduction	67
5.2	Endocrine Disrupting Chemicals	69
5.3	Epigenomics and Breast Cancer	71
5.4	Tobacco Smoking	72
5.5	Conclusion	75
	References	76
6.	DNA Methylation and Viral Infections	81
6.1	Introduction	82
6.2	Virus Infection and Methylation Changes	83
6.3	Virus Infections, DNA Methylation, and Cancer	94
6.4	Endogenous Retroviruses	97
6.5	Conclusion	97
	References	98
7.	DNA Methylation and Cancer	103
7.1	Introduction	104
7.2	Maintenance and Plasticity of the Epigenome	105
7.3	DNA Methylation, CpG Islands and CpG Shores	107
7.4	Aberrant DNA Methylation in Cancer	111
7.5	Epimutations, Heritable Alterations in Cancer	115
7.6	Epimutations of Epigenetic Regulators	119
7.7	Epigenetic Interplays	122
7.8	Reactivation of Silenced Tumor Suppressor Genes	126
7.9	Conclusion	126
	References	127
8.	DNA Methylation in Breast and Ovarian Carcinomas	135
8.1	Introduction	135
8.2	Hormonal Receptors	136
8.3	Hypomethylated Genes	137
8.4	Hypermethylated Genes	138

8.5 Conclusion	152
References	153
9. DNA Methylation in Acquired Drug Resistance	161
9.1 Introduction	161
9.2 DNA Methylation and Acquired Drug Resistance	162
9.3 Mechanisms of Acquired Drug Resistance	168
9.4 Conclusion	170
References	172
10. DNA Methylation and Endocrinology	177
10.1 Introduction	178
10.2 Imprinted Disorders	180
10.3 Rapid Promoter Methylation/Demethylation Processes	182
10.4 Exposure to Stress	184
10.5 Maternal and Sexual Behavior	187
10.6 Exposure to Endocrine Disruptors	191
10.7 Obesity and Type 2 Diabetes	192
10.8 Conclusion	196
References	197
11. DNA Methylation in Metabolic Diseases	201
11.1 Introduction	201
11.2 Obesity	203
11.3 Type 2 Diabetes	205
11.4 Epigenome-Metabolism Crosstalk	207
11.5 Conclusion	210
References	211
12. DNA Methylation in Pituitary Diseases	215
12.1 Introduction	215
12.2 Hypothalamo-Pituitary Axis	216
12.3 Pituitary Development	217
12.4 Pituitary Adenoma	218
12.5 Pro-Opiomelanocortin Gene	219
12.6 Prolactin and Growth Hormone	220
12.7 Gonadotropins (Luteinizing Hormone, Follicle Stimulating Hormone)	222
12.8 Thyroid Stimulating Hormone	222
12.9 Arginine Vasopressin and Atrial Natriuretic Peptide	223
12.10 Conclusion	224
References	224

13. DNA Methylation and Development	229
13.1 Introduction	229
13.2 Different Embryonic Lineages	231
13.3 Mesoderm Development	235
13.4 Ectoderm Development	236
13.5 Endoderm Development	237
13.6 Hematopoietic Stem Cells	238
13.7 Conclusion	238
References	238
14. DNA Methylation in Growth Retardation	241
14.1 Introduction	241
14.2 Silver-Russell Syndrome	244
14.3 Beckwith-Wiedemann Syndrome	244
14.4 Transient Neonatal Diabetes Mellitus	248
14.5 Pseudohypoparathyroidism Type 1b (PHP1b)	250
14.6 Prader-Willi and Angelman Syndromes	251
14.7 Syndromes Mimicking Uniparental Disomy 14 (UPD14)	253
14.8 Familial Biparental Hydratidiform Mole	254
14.9 Conclusion	255
References	255
15. DNA Methylation in Cardiology	261
15.1 Introduction	261
15.2 Atherosclerosis	262
15.3 Arrhythmia	264
15.4 Ischemic Heart Disease	265
15.5 Hypertension	266
15.6 Conclusion	270
References	270
16. DNA Methylation and Neurology	273
16.1 Introduction	273
16.2 Co-Adaptation of Imprinted Genes	274
16.3 Memory	276
16.4 Alcoholism	279
16.5 Drug Addiction	281
16.6 Schizophrenia	281
16.7 Conclusion	284
References	284

17. DNA Methylation in Psychiatric Diseases	289
17.1 Introduction	290
17.2 Major Psychosis	290
17.3 Alzheimer's Disease	293
17.4 Autism	299
17.5 Parkinson's Disease	301
17.6 Huntington's Disease	304
17.7 Amyotrophic Lateral Sclerosis	307
17.8 Conclusion	308
References	309
18. DNA Methylation in Cellular Mechanisms of Neurodegeneration	315
18.1 Introduction	315
18.2 Protein Misfolding	316
18.3 Protein Degradation	318
18.4 Membrane Damage	318
18.5 Mitochondrial Dysfunction	319
18.6 Axonal Transport	321
18.7 Programmed Cell Death	321
18.8 Early Life Experiences	322
18.9 Conclusion	323
References	324
19. DNA Methylation and Autoimmunity	327
19.1 Introduction	327
19.2 Environmental Factors	331
19.3 Changes in DNA Methylation	333
19.4 Conclusion	336
References	337
20. DNA Methylation in Lymphocyte Development	341
20.1 Introduction	342
20.2 Hematopoietic Cells	342
20.3 T-cell Subpopulations	343
20.4 T-cell Functions	345
20.5 B-cell Development	348
20.6 Infection and Inflammation	348
20.7 Tumor Clearance	349
20.8 Environmental Factors and Autoimmunity	350
20.9 Conclusion	352
References	353

21. DNA Methylation in Stem Cell Diseases	357
21.1 Introduction	357
21.2 Stem Cell Differentiation	358
21.3 Induced Pluripotent Stem Cells	360
21.4 Environmental Factors and Aging	361
21.5 Disruption of Differentiation and Development	362
21.6 Conclusion and Outlook	365
References	366
22. DNA Methylation and Rheumatology	371
22.1 Introduction	371
22.2 Systemic Lupus Erythematosus	372
22.3 Systemic Sclerosis	373
22.4 Osteoarthritis	374
22.5 Rheumatoid Arthritis	375
22.6 Juvenile Rheumatoid Arthritis	376
22.7 Dermatomyositis	376
22.8 Hypermobility Syndromes	376
22.9 Conclusion	377
References	377
23. DNA Methylation in Synovial Fibroblasts	381
23.1 Introduction	381
23.2 Endogenous Retroviruses	383
23.3 DNA Hypomethylation	384
23.4 DNA Methyltransferase 1	384
23.5 S-Adenosylmethionine and Adenosylhomocysteine	385
23.6 Recycling Pathway of Polyamines	386
23.7 Differential Methylation of Specific Promoters	388
23.8 MicroRNAs Interfering with DNA Methylation	388
23.9 Conclusion	389
References	389
24. DNA Methylation in Osteoporosis	395
24.1 Introduction	395
24.2 Early Development	396
24.3 Osteoblast Differentiation	398
24.4 Variations in the Response to Vitamin D	400
24.5 Conclusion	400
References	402

25. Epigenetic Therapies	405
25.1 Introduction	405
25.2 Demethylating Agents	406
25.3 Cancer Stem Cells – Targeted Therapies	408
25.4 Methyl Donors	410
25.5 Polyamine Recycling Inhibitors	412
25.6 Conclusion	413
References	413
26. Demethylating Agents	419
26.1 Introduction	419
26.2 Mechanism of Action	420
26.3 New Drug Development	421
26.4 Combination Therapies	422
26.5 Stem Cell Differentiation	423
26.6 Induction of Autoimmunity	423
26.7 Conclusion	424
References	424
27. Methyl Donors	429
27.1 Introduction	429
27.2 L-Methionine	430
27.3 Betaine	431
27.4 S-Adenosylmethionine	432
27.5 Methionine Metabolism	432
27.6 Polyamine Metabolism	435
27.7 Conclusion	436
References	436
28. Methylome Analysis of Complex Diseases	441
28.1 Introduction	442
28.2 Global DNA Methylation Analysis	442
28.3 Gene-Specific Methylation Analysis	444
28.4 Methylome-Wide Analysis	446
28.5 Sequencing Approaches	449
28.6 Conclusion	452
References	452
29. Methylome Analysis in Cancer	457
29.1 Introduction	457
29.2 Bisulfite-Based Methods	458

29.3 Non-Bisulfite Methods	459
29.4 Methylated DNA Binding Column	459
29.5 Combination with MeDiP-seq or RRBS	460
29.6 DNA Methylation in Formalin-Fixed Paraffin-Embedded Tissues	461
29.7 Conclusion	461
References	462
30. Methylome Analysis in Non-Neoplastic Disease	465
30.1 Introduction	466
30.2 Environmental Factors	466
30.3 Cardiovascular Diseases	469
30.4 Inflammatory Skin Diseases	471
30.5 Asthma	473
30.6 Inflammatory Bowel Disease	473
30.7 Rheumatic Diseases	474
30.8 Metabolic Diseases	475
30.9 Neurodegenerative Diseases	477
30.10 Psychiatric Disorders	478
30.11 Neurological Disorders	480
30.12 Conclusion	480
References	481
31. Outlook	485
Concluding Thoughts	485
References	489
Glossary	491
Index	501
