Section I **Introduction**

Section II **Where Am I? Genomic Features and DNA Sequence Principles Defining Sites of Epigenetic Regulation: Machine Learning**

CHAPTER 1 Computational Identification of Polycomb/Trithorax Response Elements 7
Marc Rehmsmeier

Introduction to Polycomb/Trithorax Response Elements 7
2003 Ad Hoc Approach to PRE Prediction, Together With Its Particular Motivations 8
Evaluating Classification Performance 11
Results of 2003 PRE Prediction 13
New Motifs Discovered 14
Recasting PRE Prediction as a Machine Learning Problem 14
Misclassification Costs and the Trade-Off Dimension 16
Evolutionary Analysis and Search-Space Reduction 17
Today: Genome-Wide Profiling Data 18
How Good Is Our Method When Evaluated Under These Data? 19
Sensitivity and Specificity of Genome-Wide Profiling 19
Conclusion 21
References 21
Glossary 23
List of Acronyms and Abbreviations 24

CHAPTER 2 Modeling Chromatin States 25
Marc Corrales and Guillaume J. Filion

The Purpose of Modeling Chromatin States 25
The Common Approach 26

What Have We Learned From Those Models? 30
Static Versus Dynamical Models 35
Chromatin States Are Attractors 36
References 40
Glossary 42
List of Acronyms and Abbreviations 43

CHAPTER 3 Crossing Borders: Modeling Approaches to Understand Chromatin Domains and Their Boundaries 45
Benjamin L. Moore and Colin A. Semple

Introduction 45
The Expanding Universe of Structural Domains 47
Experimental Techniques 50
Modeling Higher Order Chromatin Structure 54
Formalizing Compartment Calling and Boundary Prediction 57
Outlook 63
References 65
List of Acronyms and Abbreviations 67

CHAPTER 4 Inferring Chromatin Signaling From Genome-Wide ChIP-seq Data 69
Juliane Perner and Ho-Ryun Chung

Introduction 69
Experimental Techniques 71
Modeling 74
Perturbing the System 81
Outlook 81
References 83
Glossary 85
List of Acronyms and Abbreviations 85

Section III Everything's Moving: In Vivo Dynamics of Epigenetic Regulators: Kinetic Models Based on Ordinary Differential Equations

CHAPTER 5 "In Vivo Biochemistry": Absolute Quantification and Kinetic Modeling Applied to Polycomb and Trithorax Regulation ... 89
Leonie Ringrose

Introduction 89
The Journey Begins: DNA Recombinases Yield Their Secrets to Mathematics 89
The Journey Continues: Epigenetics Meets Mathematics 90

Absolute Quantification In Vivo: A Technical Challenge 91
Fluorescent Tagging: A Powerful Tool for Live Imaging *93*
Absolute Quantification of Molecule Numbers: Double Check! *95*
Everything's Moving: Methods for Measuring Kinetic Parameters In Vivo 97
In Vivo Biochemistry of an Epigenetic System: What Did We Learn? 97
Mathematical Modeling of the System: Defining What We Don't Know 102
Basic Principles of Kinetic Modeling *102*
Kinetic Modeling of Polycomb and ASH1 Makes Mechanistic Predictions *103*
Back to the Bench: Testing the Model by Perturbing the System .. 107
Outlook 109
Acknowledgments 111
References 111
Glossary 114
List of Acronyms and Abbreviations 114

CHAPTER 6 Modeling Distributive Histone Modification by Dot1 Methyltransferases: From Mechanism to Biological Insights 117
Dirk De Vos, Hanneke Vlaming, Barbara M. Bakker and Fred van Leeuwen

Introduction 117
Modeling Histone Modification by Dot1 119
Dot1 Action: Distributive Versus Processive *119*
A Distributive Mechanism of Methylation Provides an Explanation for Transhistone Cross-Talk Phenotypes *125*
Histone Dilution as a Mechanism to Counteract the Distributive Build-Up of H3K79 Methylation *126*
A Single-Cell Model of H3K79 Methylation to Describe the Dynamics During the Cell Cycle *126*
Extending the Single-Cell Model With Demethylation *128*
Modeling H3K76 Methylation by Dot1 in African Trypanosomes *128*
A Two-Enzyme Single-Cell Model to Describe the Cell Cycle Control of H3K76 Methylation in Trypanosomes *129*
Future Developments and Applications of the Models *130*
Acknowledgments 131
References 131

Glossary 135
List of Acronyms and Abbreviations 135
Appendix: Parameter Estimation and Formal Mathematical Description of the Models 135

Section IV Reconciling Randomness and Precision: Bistable Epigenetic Memory and Switching: Stochastic Models

CHAPTER 7 Modeling Bistable Chromatin States 145
Ian B. Dodd and Kim Sneppen

Cell Memory by Chromatin-Based Epigenetics 145
Modeling Approach and Philosophy 147
Benefits of Mathematical Modeling 147
Our Modeling Approach—Simplified Stochastic Simulations 147
Nucleosome-Mediated Epigenetics 147
Fundamental Lessons From Modeling Nucleosome-Mediated Bistability in Fission Yeast 149
Different Reaction Schemes 153
Temporal Regulation—Tilting the System 154
Spatial Regulation—Containing Positive Feedback 156
DNA Methylation-Mediated Epigenetics 158
CpG Methylation 158
Modeling Bistability Through CpG Collaboration 160
Outlook 165
References 165
Glossary 168
List of Acronyms and Abbreviations 168

CHAPTER 8 Quantitative Environmentally Triggered Switching Between Stable Epigenetic States 169
Rea Antoniou-Kourounioti and Martin Howard

Introduction 169
Memory of the Cold Is Digital and Is Stored Locally in the Chromatin 173
Memory 173
Switching 177
Cold Registration Is Digital 178
Model Validation 181
Outlook 183
References 185
Glossary 186
List of Acronyms and Abbreviations 187

Section V **The Third and Fourth Dimensions: Chromosomal Long Range Interactions: Polymer Models**

CHAPTER 9 On the Nature of Chromatin 3D Organization: Lessons From Modeling 191
Mario Nicodemi and Ana Pombo

Introduction 191
Polymer Models of Chromatin 191
Polymer Models of TADs 193
Polymer Models of Mitotic Chromosomes 196
Models to Reconstruct 3D-Conformation From Contact Data 197
Conclusions 198
References 199
Glossary 201

CHAPTER 10 From Chromosome Conformation Capture to Polymer Physics and Back: Investigating the Three-Dimensional Structure of Chromatin Within Topological Associating Domains 203
Guido Tiana, Edith Heard and Luca Giorgetti

Introduction 203
From 5C/Hi-C Maps to Three-Dimensional Structures 207
Description of the Data-Driven Polymer Model 210
What Can Be Learned From Data-Driven, Polymer-Based Reconstructions of Chromosome Structure? 213
What Are the Molecular Mechanisms Behind Interaction Energies? 217
Conclusions and Perspectives 220
References 220
Glossary 224
List of Acronyms and Abbreviations 224

CHAPTER 11 A Combination Approach Based on Live-Cell Imaging and Computational Modeling to Further Our Understanding of Chromatin, Epigenetics, and the Genome 225
Kayo Hibino, Kazunari Kaizu, Koichi Takahashi and Kazuhiro Maeshima

Introduction: Genomic DNA, Nucleosomes, and Chromatin 225
Experimental Techniques: Single-Nucleosome Imaging in Living Cells Using Super-Resolution Microscopy 227
Modeling: Monte Carlo Simulation of Chromatin Dynamics 229
Another Result From the Model: Physical Size of Transcription Complexes 232

Perspective 235
References 236
Glossary 238
List of Acronyms and Abbreviations 238

CHAPTER 12 Capturing Chromosome Structural Properties From Their Spatial and Temporal Fluctuations 239
Aurélien Bancaud, Olivier Gadal and Kerstin Bystricky

Introduction 239
Chromosome Labeling Technologies 241
Spatial Dynamics: Real-Time Imaging and Tracking of Single Chromosome Loci 244
Imaging Experiments *244*
A Few Facts on the Signal-to-Noise Ratio in Single Particle Experiments *244*
Tracking and Trajectory Reconstruction *246*
Data Analysis *247*
Mapping Chromosome Conformational Dynamics by Single/Multi Loci Positioning 250
Single Locus Localization in the Nucleus in a Large Population of Cells *250*
Multilocus Localization for Chromosome Conformation Analysis *253*
Real-Time Tracking of Multiple Loci *254*
Outlook—Future Developments 255
Technological Pipeline *255*
Chromosome Structure and Dynamics and Their Link to Genome Transactions *256*
References 256
Glossary 263
