Contents

List of Contributors	xvii	3. Viruses as Quasispecies	23
Introduction	xix	4. Overview of RNA Virus Replication Mechanisms	23
1. Genome Stability: An Evolutionary Perspective		5. The Viral Polymerase as a Source of Error	23
<i>I. Kovalchuk</i>		6. Other Viral Determinants of Mutation Rate	25
1. Introduction	1	7. Recombination	25
2. Evolution Theories and My Reflection on Them	2	8. The Effect of Replication Mode on Mutation Frequency	27
3. The Role of Symbiosis in Genome Evolution	3	9. The Effect of Cellular Factors on Virus Mutation Rate	27
3.1 Changes in the Structure of the Organellar Genome Over Time	4	10. Mechanisms Underlying Genetic Robustness in RNA Viruses	28
3.2 Mutation Rates in Organellar Genomes and Adaptive Evolution	4	11. RNA Viruses on the Edge	29
3.3 Symbiotic Interactions Between Viruses, Prokaryotes, and Eukaryotes: The Role of Transposable Elements	5	12. Virus Genetic Variability and the Virus–Host “Arms Race”	30
4. Fixation of a Mutant Allele in a Population	6	13. Taking Advantage of the Mutability of RNA Viruses	31
5. Evolution of Mutation Rates	7	14. Conclusion	31
5.1 Evolution of Somatic Mutation Rates	9	Glossary	31
6. Genome Instability: Is It Random?	11	List of Abbreviations	32
6.1 A Bias in Mutations in Different Genomic Regions	12	References	33
7. Genome Evolution May Start From Changes at the Level of DNA Methylation or Chromatin Modification	13	3. Genome Instability in DNA Viruses	
8. Conclusion	15	<i>R. Sanjuán, M. Pereira-Gómez and J. Risso</i>	
Glossary	15	1. Overview	37
List of Abbreviations	16	2. Rates of Spontaneous Mutation and Genetic Diversity of DNA Viruses	38
References	16	3. Mutator Phenotypes Produced by Low-Fidelity DNA Virus Polymerases	38
		4. DNA Coliphages and the MMR System	39
		5. The Interaction Between DNA Viruses and the Eukaryotic DNA Damage Response	40
		6. Diversity-Generating Retro-Elements in Bacteriophages	41
		7. Recombination-Driven Genome Instability in DNA Viruses	41
		8. APOBEC3 Proteins and DNA Virus Genome Instability	42
		9. Conclusions and Future Directions	43
		Glossary	44
		List of Acronyms and Abbreviations	44
		References	44

Section I

Genome Instability of Viruses

2. Genetic Instability of RNA Viruses

J.N. Barr and R. Fearn

1. Introduction 21
2. Overview of RNA Virus Multiplication 21

Section II

Genome Instability in Bacteria and Archaea

4. Genome Instability in Bacteria and Archaea: Strategies for Maintaining Genome Stability

J.-E. Messling and A.B. Williams

1. Introduction	51
2. Responses to DNA Damage	55
2.1 The SOS Response: A Primitive Cell-Cycle Checkpoint	55
2.2 An Archaeal UV Response Based on DNA Sharing	56
3. DNA Repair Pathways	57
3.1 Direct Reversal of DNA Damage	57
3.2 Base Excision Repair and Removal of Uracil from DNA	58
3.3 Nucleotide Excision Repair: A Versatile DNA-Repair Pathway	59
3.4 Correcting Mismatched Bases: Cleanup After DNA Replication	60
3.5 Recombination Repair: Dealing With Double-Strand Breaks	61
4. Restriction-Modification Systems: Protecting the Genome From Invaders	62
5. Conclusion	64
Glossary	64
List of Abbreviations	64
References	65

5. Genome Instability in Bacteria: Causes and Consequences

A.B. Williams

1. Introduction	69
2. Effects of Stress Responses on Genome Instability	69
2.1 The SOS Response	70
2.2 The RpoS-Mediated General Stress Response	71
2.3 The Stringent Response	72
2.4 Heat and Cold Shock Responses	72
2.5 Polyphosphate-Mediated Starvation Response	72
3. Genome Instability Due to Stable Mutator Genotypes	73
4. Genome Instability Due to Homologous and Illegitimate Recombination	74
4.1 Microsatellite Instability	74
4.2 Gene Conversion	74
4.3 Site-Specific Inversion Systems	75
4.4 Error-Prone Double-Strand Break Repair	76

5. Genome Instability Due to Specialized Genetic Elements	77
5.1 Insertion Sequences	77
5.2 Transposons (Nonconjugative)	78
5.3 Miniature Inverted-Repeat Transposable Elements	78
6. Genome Instability Due to Genetic Exchange	78
6.1 Transduction	79
6.2 Conjugation	79
6.3 Transformation	80
7. Conclusion	80
Glossary	80
List of Abbreviations	81
References	81

6. CRISPR: Bacteria Immune System

A. Golubov

1. Introduction	87
2. History of the CRISPR/Cas Discovery	87
3. Structure of the CRISPR Loci	88
4. CRISPR/Cas Classification	89
5. Composition of the CRISPR/Cas Systems	90
6. Molecular Machines of CRISPR/Cas Systems	91
7. CRISPR/Cas Systems at Work	92
7.1 The CRISPR Adaptation	92
7.2 The Expression Stage	94
7.3 The CRISPR Interference	94
8. Other Roles of the CRISPR/Cas Systems	94
9. Conclusion	95
Glossary	95
List of Acronyms and Abbreviations	96
References	96

Section III

Genome Stability of Unicellular Eukaryotes

7. From Micronucleus to Macronucleus: Programmed DNA Rearrangement Processes in Ciliates Are Regulated Epigenetically by Small and Long Noncoding RNA Molecules

F. Jönsson

1. Introduction	101
2. The Sexual Life Cycle of Ciliates	102
3. Organization of the Micro- and Macronuclear Genomes	103
4. Epigenetic Regulation of Macronuclear Development in <i>Tetrahymena</i>	106

5. Epigenetic Regulation of Macronuclear Development in Stichotrichous Ciliates	108	1.2 <i>Drosophila</i> as a Model Organism: The Basics	140
6. Conclusion	112	2. Mitotic Recombination	140
Glossary	112	2.1 Mitotic Recombination: A Historical Perspective	141
List of Abbreviations	112	2.2 Mechanisms of Mitotic Recombination	141
References	112	2.3 Initial Response and Pathway Choice	141
8. Homologous Recombination and Nonhomologous End-Joining Repair in Yeast		2.4 Synthesis-Dependent Strand Annealing: A Model Consummated in Flies	143
<i>R.E. Jones and T.C. Humphrey</i>		2.5 End Joining in <i>Drosophila</i>	145
1. Introduction	117	2.6 Mitotic COs and the dHJ Model	145
1.1 A Brief History	118	3. Meiotic Recombination	146
2. Homologous Recombination Models	118	3.1 Meiotic Recombination: A Historical Perspective	146
2.1 Holliday Model	118	3.2 Mechanisms of Meiotic Recombination	147
2.2 Double-Strand Break Repair Model	118	3.3 Initiation of Recombination	147
2.3 Synthesis-Dependent Strand Annealing Model	120	3.4 Preference of Homolog as Repair Template	147
2.4 Break-Induced Replication Model	120	3.5 Promoting CO Formation: Pro-CO Complexes	148
2.5 Single-Strand Annealing Model	120	3.6 Promoting CO Formation: Meiotic Resolvases	148
3. Common Homologous Recombination Steps	121	3.7 Meiotic Recombination in <i>Drosophila</i> : Double-End Engagement Model	149
3.1 End Resection	121	4. <i>Drosophila</i> : The Next 100 Years	150
3.2 Nucleofilament Formation	124	Glossary	150
3.3 Homology Search and Strand Invasion	124	List of Acronyms and Abbreviations	151
3.4 DNA Repair Synthesis	124	References	152
3.5 Strand Annealing	125	10. Genome Stability in <i>Drosophila</i> : Mismatch Repair and Genome Stability	
3.6 Resolution and Dissolution of Recombination Intermediates	125	<i>T. Negishi</i>	
4. Nonhomologous End-Joining	126	1. Introduction	155
4.1 Core Nonhomologous End-Joining Machinery	126	2. MMR Activity in <i>Drosophila</i>	155
4.2 Alternative End-Joining	128	3. MMR Genes in <i>Drosophila</i>	156
5. Cell Cycle Regulation of Homologous Recombination and Nonhomologous End-Joining	129	4. MMR and Microsatellite Instability	156
6. Conclusion	129	5. The Role of MMR in Meiotic Recombination	157
Glossary	129	6. MMR and Somatic Cell Mutation	157
List of Acronyms and Abbreviations	130	7. Conclusion	159
References	131	Glossary	160
		List of Abbreviations	160
		References	160
Section IV		11. Genome Stability in <i>Caenorhabditis elegans</i>	
Genome Stability in Multicellular Eukaryotes		<i>M. Rieckher, A.F.C. Lopes and B. Schumacher</i>	
9. Meiotic and Mitotic Recombination: First in Flies		1. Introduction	163
<i>J.K. Holsclaw, T. Hatkevich and J. Sekelsky</i>		2. The <i>Caenorhabditis elegans</i> Model	164
1. Introduction	139	3. Powerful Genetic Tools to Explore DDR Dynamics	164
1.1 Recombination in <i>Drosophila</i> : The First 100 Years	139		

5. Conclusion	237	8. Physiological Roles of RAD18	266
Glossary	237	8.1 Developmental Roles of RAD18	266
List of Acronyms and Abbreviations	238	8.2 RAD18 Roles in Tumorigenesis	266
Acknowledgments	238	9. Conclusions and Perspectives	267
References	238	Glossary	267
		List of Abbreviations	267
		References	268
15. The Role of p53/p21/p16 in DNA-Damage Signaling and DNA Repair		17. Base Excision Repair and Nucleotide Excision Repair	
<i>Y. Kulaberoglu, R. Gundogdu and A. Hergovich</i>		<i>T. Izumi and I. Mellon</i>	
1. Introduction	243	1. General Overview and Historical Perspectives of Two DNA Excision-Repair Pathways, BER and NER	275
2. The p53 Tumor-Suppressor Protein	244	2. Mammalian BER	276
2.1 p53 in the DNA-Damage Response	244	2.1 History and Overview of BER	276
2.2 p53 in DNA-Damage Repair	246	2.2 Types of DNA Damage Repaired by BER	276
2.3 p53 in Tumor Suppression and the DNA-Damage Response	246	2.3 Mechanism of Mammalian BER	277
2.4 p53 and Targeted DNA-Damaging Cancer Therapy	247	2.4 BER Gene Knockout in Mice and Cells	283
3. The p21 Tumor-Suppressor Protein	248	3. Mammalian NER	283
3.1 p21 in the DNA-Damage Response	248	3.1 History and Overview of NER	283
3.2 p21 in DNA-Damage Repair	249	3.2 Types of DNA Damage Repaired by NER	286
3.3 p21 and Tumor Suppression	249	3.3 Mechanisms of Mammalian NER	286
4. The p16 ^{INK4A} Tumor-Suppressor Protein	250	3.4 Transcription-Coupled NER	289
5. Conclusion	251	3.5 NER and Chromatin Structure	290
Glossary	252	3.6 Alterations in NER and Cancer Predisposition	290
List of Acronyms and Abbreviations	252	4. Biological Implications Beyond DNA Damage and Repair	291
Acknowledgments	252	4.1 Diversity of Immune Cells by Activation-Induced Deaminase	291
References	253	4.2 DNA Demethylation	291
		5. Interplay Between NER and BER: The Key Role of the DNA-Damage Response for Prevention of Cellular Degeneration	291
16. Roles of RAD18 in DNA Replication and Postreplication Repair		5.1 Overlapping Substrate Specificity Between BER and NER	291
<i>C. Vaziri, S. Tateishi, E. Mutter-Rottmayer and Y. Gao</i>		5.2 A Nuclear-Mitochondria Signaling Network as a Main Platform of BER/NER Interplay	292
1. Introduction: The DDR, DNA Damage-Tolerance and DNA Damage-Avoidance Mechanisms	257	6. Concluding Remarks	293
2. Identification of RAD18-RAD6 as a Mediator of DNA Damage Tolerance	258	Glossary	293
3. RAD18-Mediated PCNA Monoubiquitination and the TLS Polymerase Switch	259	List of Abbreviations	294
4. RAD18 Structure, Activation, and Coordination With the DDR	259	Acknowledgment	295
4.1 RAD18 Structure	259	References	295
4.2 RAD18 Activation	260		
4.3 Transcriptional and Posttranslational Regulation of RAD18	262	18. DNA Mismatch Repair in Mammals	
5. DNA Replication-Independent RAD18 Activation and TLS	262	<i>M. Yang and P. Hsieh</i>	
6. RAD18 Functions in Error-Free PRR via Template Switching	264	1. Introduction and Brief History	303
7. TLS- and TS-Independent Roles of RAD18 in Genome Maintenance	265	2. Post-Replication Mismatch Repair	304

Glossary	365	24. Role of DNA Methylation in Genome Stability	
List of Acronyms	365	<i>D. Zhou and K.D. Robertson</i>	
Acknowledgments	366	1. Introduction to the Cellular Functions of DNA Methylation	409
References	367	1.1 DNA-Methylation Dynamics	409
		1.2 Transcriptional Regulation by DNA Methylation	411
22. The Relationship Between Checkpoint Adaptation and Mitotic Catastrophe in Genomic Changes in Cancer Cells		2. Multifaceted Regulation of Genome Stability by DNA Methylation	411
<i>L.H. Swift and R.M. Golsteyn</i>		2.1 Chromosomal Rearrangement and Changes in Nucleic Acid Sequences	411
1. Cancer and Its Hallmarks	373	2.2 DNA-Damage Repair	413
2. The Cell Cycle	374	2.3 DNA Methylation and Heterochromatin Stability	417
3. Cell-Cycle Checkpoints	375	3. Conclusions and Future Direction	419
4. Genotoxic Agents as Anticancer Drugs	375	Glossary	420
5. Cell Death	376	List of Acronyms and Abbreviations	420
6. Mitotic Catastrophe	377	References	421
7. Dual Modes of Cell Death by the Same Genotoxic Agent	379		
8. The Relationship Between Entry Into Mitosis With Damaged DNA and Genomic Instability	379	25. Noncoding RNAs in Genome Integrity	
8.1 Chromothripsis	380	<i>I. Kovalchuk</i>	
9. A History of Checkpoint Adaptation	380	1. Introduction	425
10. Checkpoint Adaptation in Human Cells	383	2. Targeting Bacteriophage Genomes by CRISPR/Cas9	425
11. The Consequences of Checkpoint Adaptation	384	3. DNA Elimination in Ciliates	426
12. The Relationship Between Checkpoint Adaptation and Genomic Instability	384	4. Telomerase RNA and Telomere Length	426
Glossary	385	5. Role of Micro-RNAs in the Regulation of DNA Repair and Genome Stability	426
List of Abbreviations	385	5.1 A Brief Overview of Micro-RNA Biogenesis	426
Acknowledgments	386	5.2 Indirect Impact of miRNAs on Genome Stability	426
References	386	5.3 DNA-Repair Factors Can Affect miRNA Biogenesis in Response to Stress	428
		5.4 Regulation of the Activity of DNA-Damage Sensors and Effectors by miRNAs	428
23. Chromatin, Nuclear Organization, and Genome Stability in Mammals		6. The Role of Piwi-Interacting RNA in the Maintenance of Genome Stability in the Germline	429
<i>L. Boteva and N. Gilbert</i>		6.1 piRNAs in <i>Drosophila</i>	430
1. Introduction	391	6.2 piRNAs in Mammals	432
2. Histones	392	6.3 piRNAs in <i>C. elegans</i>	432
2.1 Histone Variants	392	6.4 piRNAs in Transgenerational Response	434
2.2 Histone Modifications	392	7. The Role of Small Interfering RNAs in the Maintenance of Genome Stability	435
3. Nucleosomes and the 30-nm Fiber	394	7.1 siRNAs in <i>Neurospora crassa</i>	435
4. Higher-Order Structures	395	7.2 DNA Strand Break-Induced Small RNAs or diRNAs Are Involved in DSB Repair	436
5. Chromatin Remodelers	395		
6. Access, Repair, Restore	397		
7. Nuclear Organization of Chromatin	398		
8. Chromosome Territories	399		
9. Transcription and Replication in the Nucleus	400		
10. Conclusions	403		
Glossary	403		
List of Abbreviations	404		
References	404		

8. Conclusion	439
Glossary	439
List of Abbreviations	440
References	440

Section VI

Human Diseases Associated With Genome Instability

26. Human Diseases Associated With Genome Instability

B.C. Feltes, J. de Faria Poloni, K.N. Miyamoto and D. Bonatto

1. Introduction	447
2. Rare Genetic Diseases Associated With DNA Repair	447
2.1 NER-Related Diseases: Xeroderma Pigmentosum, Trichothiodystrophy, and Cockayne Syndrome	448
2.2 Fanconi Anemia	450
2.3 RECQ-Related Diseases: Rothmund–Thomson Syndrome, Werner Syndrome, and Bloom Syndrome	450
2.4 Ataxia Telangiectasia	453
2.5 Hutchinson–Gilford Progeria Syndrome	453
2.6 Rare Genetic Diseases: Summary	454
3. Cancer and Genome Instability	454
4. Epigenetic Regulation of Cell Cycle and DNA Repair in Cancer	456
Glossary	459
List of Acronyms and Abbreviations	459
References	461

27. Cancer and Genomic Instability

W. Wei, Y. Cheng and B. Wang

1. Introduction	463
2. DNA-Repair Pathways	463
2.1 Base Excision–Repair Pathway	464
2.2 Nucleotide Excision–Repair Pathway	464
2.3 Mismatch–Repair Pathway	465
2.4 Repair of DNA Double-Strand Breaks	468
3. Genomic Instability in Hereditary Cancer	468
3.1 Li–Fraumeni Syndrome and TP53	469
3.2 MYH-Associated Polyposis and Deficiency in Base Excision Repair	469
3.3 Xeroderma Pigmentosum and a Deficiency in Nucleotide Excision Repair	470

3.4 Hereditary Cancers Associated With Defects in DNA Mismatch Repair	471
3.5 Hereditary Cancers Associated With Defects of DNA Double-Strand Break Repair	472
4. Genomic Instability in Sporadic Cancers	474
4.1 CIN in Sporadic Cancers	474
4.2 Hypothesis of the Mechanisms of CIN	475
4.3 High-Throughput Sequencing Studies on CIN in Various Cancers	475
4.4 Oncogenes Induce CIN	476
4.5 Chromothripsis	477
4.6 Microsatellite Instability in Sporadic Cancer	477
5. Triggering Excessive Genomic Instability by Targeting DNA-Repair Pathways as a Strategy for Cancer Therapy	478
6. Conclusion	480
Glossary	480
List of Abbreviations	480
References	483

28. Chromatin Modifications in DNA Repair and Cancer

M. Renaud-Young, K. Riabowol and J. Cobb

1. Introduction	487
2. Interrelationship of DNA and Chromatin	487
3. Histone Modifications and Chromatin Remodelers	488
3.1 Histone Acetyltransferases and Deacetylases	488
3.2 Histone Lysine Methyltransferases and Demethylases	490
3.3 Histone Ubiquitination and Sumoylation	491
3.4 Histone Phosphorylation	491
3.5 Nucleosome Exchangers and Remodelers	491
3.6 Histone Variants	492
4. Chromatin Modifiers in Genome Stability	492
4.1 DNA Replication	492
4.2 DNA-Damage Response and Repair	493
5. Replication Stress, Activation of the S-Phase Checkpoint and DNA-Damage Tolerance	498
5.1 DNA-Damage Tolerance	498
5.2 PCNA Modification and DNA-Damage Tolerance	499
5.3 EF-Damage Tolerance	500
5.4 Translesion Synthesis–Damage Tolerance	500
5.5 Checkpoint Signaling, Chromatin, and DDT	500

32. Chemical Carcinogens and Their Effect on Genome and Epigenome Stability

O. Kovalchuk

- | | |
|--|-----|
| 1. Introduction | 555 |
| 2. Epigenetic Regulators | 556 |
| 2.1 DNA Methylation | 556 |
| 2.2 Histone Modifications | 557 |
| 2.3 RNA-Induced Effects | 558 |
| 3. Effects of Metals | 558 |
| 4. Tamoxifen Effects | 559 |
| 5. Effects of 1,3-Butadiene | 560 |
| 6. Influence of Polycyclic Aromatic Hydrocarbons | 561 |
| 7. Conclusions | 562 |
| Glossary | 563 |
| List of Abbreviations | 563 |
| References | 563 |

33. Environmental Sources of Ionizing Radiation and Their Health Consequences

A.A. Goodarzi, A. Anikin and D.D. Pearson

- | | |
|--|-----|
| 1. Introduction | 569 |
| 2. The Molecular Effects of IR in Cells | 569 |
| 3. Radiation Dosage and Linear Energy Transfer | 571 |
| 4. Nuclear Military Attacks and Civilian Nuclear Disasters | 572 |
| 5. Aerospace Travel | 573 |
| 6. Medical Radiation (Radiotherapy and Medical Imaging) | 574 |
| 7. Radon Gas | 575 |
| 8. Conclusion | 577 |
| Glossary | 577 |
| List of Abbreviations | 577 |
| References | 578 |

Section VIII

Bystander and Transgenerational Effects – Epigenetic Perspective

34. Sins of Fathers Through a Scientific Lens: Transgenerational Effects

M. Merrifield and O. Kovalchuk

- | | |
|---|-----|
| 1. Introduction | 585 |
| 2. Radiation-Induced Genome Instability | 586 |

- | | |
|--|-----|
| 2.1 Transgenerational Effects and Transgenerational Genome Instability | 586 |
| 2.2 Bystander Effects | 588 |

- | | |
|--|-----|
| 3. Mechanisms of Transgenerational Effects: Epigenetic Changes | 589 |
| 3.1 DNA Methylation | 589 |
| 3.2 Histone Modifications | 590 |
| 3.3 Small RNA-Mediated Events | 590 |
| 4. Transgenerational Effects Caused by Other Mutagens | 592 |
| 5. Conclusions and Outlook | 593 |
| Glossary | 594 |
| List of Abbreviations | 594 |
| References | 594 |

35. Genomic Instability and the Spectrum of Response to Low Radiation Doses

C. Mothersill and C. Seymour

- | | |
|---|-----|
| 1. Introduction to Low Radiation-Dose Effects | 601 |
| 1.1 Background to the Controversy | 601 |
| 1.2 Epidemiology Is a Blunt Tool | 601 |
| 1.3 Targeted and Nontargeted Effects | 602 |
| 1.4 Genomic Instability | 603 |
| 1.5 Bystander Effects | 603 |
| 1.6 Adaptive/Hormetic Effects | 604 |
| 1.7 Generic Stress Responses | 605 |
| 2. Concept of Uncertainty | 605 |
| 2.1 Spectrum of Effects | 605 |
| 2.2 Spectrum of Responses | 606 |
| 2.3 Individual Variation | 606 |
| 2.4 The Role of Genetic Background | 607 |
| 2.5 The Role of Other Stressors | 607 |
| 2.6 The Role of Lifestyle Factors | 607 |
| 2.7 Species-Sensitivity Distribution | 607 |
| 3. Search for Determinators | 607 |
| 3.1 Bioindicators | 608 |
| 3.2 Biomarkers | 608 |
| 3.3 Biosensors | 608 |
| 3.4 Signals | 608 |
| 3.5 System-Level Responses | 609 |
| 3.6 Emergent Effects | 609 |
| 4. Conclusions | 609 |
| Glossary | 609 |
| List of Acronyms and Abbreviations | 610 |
| Acknowledgments | 610 |
| References | 610 |

36. Transgenerational Genome Instability in Plants

I. Kovalchuk

- | | |
|--|-----|
| 1. Introduction | 615 |
| 2. Genome Stability May Depend Upon the Choice of the DSB DNA-Repair Pathway | 616 |

3. Epigenetic Regulation of Plant Genome Stability	617		
3.1 Chromatin Structure, a Response to Stress and Genome Stability	617		
3.2 The Role of DNA Methylation in the Maintenance of Plant Genome Stability and Response to Stress	619		
3.3 The Role of Histone Modifications in the Maintenance of Genome Stability	622		
3.4 ncRNAs Are Likely Involved in the Regulation of Genome Stability and DNA Repair	623		
4. Transgenerational Responses	623		
4.1 Types of Transgenerational Effects and Possible Mechanisms of Their Appearance	623		
4.2 Transgenerational Changes in Response to Abiotic Stress	625		
4.3 Transgenerational Changes in Genome Stability, Methylation, and Stress Tolerance in Response to Biotic Stress	626		
5. Possible Mechanisms Involved in the Regulation of Transgenerational Inheritance of Stress Memory	627		
5.1 The Potential Role of DNA-Repair Factors	628		
5.2 The Role of Epigenetic Regulators	628		
6. Concluding Remarks	629		
Glossary	629		
List of Abbreviations	630		
References	630		
37. Methods for the Detection of DNA Damage			
<i>D.V. Firsanov, L.V. Solovjeva, V.M. Mikhailov and M.P. Svetlova</i>			
1. Introduction	635		
2. The Detection of DSBs in Cultivated Mammalian Cells and Tissues	636		
2.1 Phosphorylated Histone H2AX as a Marker of DSBs	636		
2.2 Imaging of DSB Repair Proteins at Chromatin Sites Marked by γ H2AX in Cultivated Mammalian Cells	641		
3. γ H2AX in Biodosimetry and Clinical Assays	643		
4. Comet Fluorescence In Situ Hybridization (Comet-FISH) in the Detection of Different Types of DNA Damage	644		
5. Methods for Studying DNA Repair After UV	644		
6. Conclusions	646		
Glossary	646		
List of Abbreviations	646		
Acknowledgments	647		
References	647		
38. Conserved and Divergent Features of DNA Repair: Future Perspectives in Genome Instability Research			
<i>I. Kovalchuk</i>			
1. An Overview and Comparison of DNA-Repair Pathways in Different Organisms	651		
1.1 Direct Reversal of DNA Damage	651		
1.2 Base Excision Repair	653		
1.3 Nucleotide Excision Repair	653		
1.4 Mismatch Repair	654		
1.5 Double-Strand Break Repair	654		
2. Recent Advances and Future Directions in DNA Repair	656		
2.1 The Remaining Questions in MMR	656		
2.2 The Remaining Questions in DSBs Repair	658		
3. Future Directions in Research on DNA Repair, Genome Stability, and Cancer	660		
4. Future Perspectives in DNA-Editing Technologies	662		
Glossary	663		
List of Abbreviations	663		
References	664		
Index			667
