Preface

xvii

1	Introduction to Magnetism and Magnetic Materials	1
1.1	Basic Electromagnetism	2
1.1.1	Magnetic Field: Biot–Savart and Ampere Laws	2
1.1.2	Magnetic Induction or Flux Density	4
1.1.3	The Magnetic Flux	6
1.2	Elementary Magnetostatics	7
1.2.1	Magnetic Charges: “Monopoles” and Dipoles	7
1.2.2	Magnetic Dipole Moment	8
1.2.3	Field Due to a Magnetic Dipole	9
1.3	The Magnetic Moment: Equivalence of Dipoles and Current Loops	11
1.4	Sources of Magnetic Fields	12
1.4.1	Field Generated by a Circular Current Loop	12
1.4.2	Field Generated by a Solenoid	14
1.4.3	Helmholtz Coils	15
1.4.4	A Planar Coil: Archimedean Spiral	16
1.5	Intensity of Magnetization	17
1.6	Relationship between Magnetization, Field, and Induction	18
1.7	Susceptibility and Permeability	20
1.8	An Overview of the Types of Magnetic Behavior in Materials	22
1.8.1	Diamagnetism	22
1.8.2	Paramagnetism	23
1.8.3	Ferromagnetism	23
1.8.4	Antiferromagnetism	25
1.8.5	Ferrimagnetism	25
1.9	Hysteresis	26
1.10	Work Done by the External Field in Hysteresis	28
1.11	Demagnetization	29
1.11.1	Calculation of Demagnetizing Factors	31
1.11.2	Gauss Law	34
1.11.3	Demagnetization Energy	36
1.11.4	Practical Consequences of the Demagnetization Field	37
1.12	Maxwell Equations	38

Summary	39
Further Reading	40
References	41
Exercises	41
2 Atomic Origins of Magnetism	47
2.1 Quantization of Energy	48
2.2 Quantization of Angular Momentum	50
2.3 Spatial Quantization of the Angular Momentum	50
2.4 One-Electron Wave Functions Subject to a Central Force	52
2.5 Relationship Between the Orbital Angular Momentum and the Magnetic Moment of an Electron	55
2.5.1 The Zeeman Effect: Evidence for Spatial Quantization	56
2.6 Electron Spin	57
2.7 The Stern–Gerlach Experiment	58
2.7.1 Nuclear Spin	60
2.8 The Spin–Orbit Interaction	61
2.9 The Electronic Structure of the Atom	63
2.10 Total Angular Momentum and the Magnetic Moment of the Atom	66
2.11 Quenching of Orbital Angular Momentum	71
2.12 Electron Paramagnetic Resonance (EPR) and Determination of the Landé g -Factor	73
Summary	75
Further Reading	75
Reference	75
Exercises	76
3 Magnetic Materials: From Isolated Moments to Ordered Arrangements	79
3.1 Langevin Theory of Diamagnetism	80
3.2 Introduction to Superconductors	82
3.3 Langevin Theory of Paramagnetism	84
3.4 Quantum Theory of Paramagnetism	87
3.5 Weiss Theory of Ferromagnetism	90
3.6 Law of Corresponding States	95
3.7 Mean-Field Approximation, Critical Phenomena, and Exponents	98
3.8 Exchange Interactions	102
3.9 Nature of the Exchange Integral and the Bethe–Slater Curve	105
3.10 Helical Structures	107
3.11 The Physical Meaning of Long-Range and Short-Range Forces	108
Summary	109
Further Reading	110
References	110
Exercises	110

4 Other Ordered Magnetic Materials: Antiferromagnetism and Ferrimagnetism	115
4.1 Introduction to Antiferromagnetism	115
4.2 Molecular Field Theory of Antiferromagnetism	117
4.2.1 Temperature $T > T_N$	117
4.2.2 Temperature $T < T_N$	118
4.2.3 Field Applied Perpendicular to the Spin Lattice Direction	120
4.2.4 Field Applied Parallel to the Spin Direction ($T < T_N$)	120
4.2.5 Powder or Polycrystalline Samples	122
4.3 Spin-Flopping and Metamagnetism	123
4.4 Introduction to Ferrimagnetic Materials	124
4.5 Molecular Field Theory of Ferrimagnetism	125
4.5.1 At High Temperatures, $T > T_C$	126
4.5.2 For Low Temperature, $T < T_C$	127
4.6 Indirect Exchange Interactions	129
4.6.1 Super-Exchange Interactions	130
4.6.2 Double-Exchange Interaction	132
4.7 Role of Local Symmetry and the Environment	133
4.8 Determination of Magnetic Order: Neutron Scattering	136
4.9 Examples of Antiferromagnetic and Ferrimagnetic Materials	140
4.9.1 Rock-Salt Structures	140
4.9.2 Spinel Structure Compounds (Ferrites)	141
4.9.3 The Garnet Structure	145
4.9.4 Perovskites	147
4.9.5 Hexagonal Iron Oxide Structures	149
Summary	151
Further Reading	152
References	153
Exercises	153
5 Magnetism in Metals and Alloys	157
5.1 Introduction to the Electronic Structure of Metals	158
5.2 Free Electron Theory of Metals	159
5.3 Pauli Paramagnetism	163
5.4 Stoner Model of Ferromagnetism	165
5.5 Ferromagnetism of $3d$ Transition Metals and Alloys	168
5.6 The Slater–Pauling Curve	174
5.7 Spin Density Waves	176
5.8 The Indirect RKKY Interaction	178
5.8.1 Spin Glass and Frustration	180
5.8.2 The Kondo Effect	181
5.9 Amorphous Ferromagnetic Metals and Alloys	182
5.10 Examples of Magnetic Alloys	185

x *Contents*

Summary	187
Further Reading	188
References	189
Exercises	190
6 Magnetic Anisotropy	193
6.1 Magnetocrystalline Anisotropy	193
6.1.1 Cubic Crystals	195
6.1.2 Uniaxial (Hexagonal) Crystals	197
6.1.3 General Crystal Structures	200
6.2 Anisotropy Measurements	200
6.2.1 Torque Magnetometry	201
6.3 Determination of Anisotropy Constants from Magnetization	207
6.3.1 Fitting Magnetization Curves	208
6.3.2 Areas of Magnetization Curves	212
6.4 Anisotropy Field	213
6.5 Magnetic Resonance	213
6.6 Nature of Magnetocrystalline Anisotropy	214
6.7 Shape or Magnetostatic Anisotropy (Revisited)	217
6.8 Magnetostriction or Magnetoelastic Anisotropy	217
6.8.1 Phenomenological Theory of Magnetostriction (Magnetoelastic Energy)	221
6.8.2 Magnetostriction and the Effect of Stress	225
6.9 Mixed Anisotropies	226
6.9.1 An Example	226
6.9.2 A Graphical Solution	226
6.10 Anisotropy in Amorphous Magnets	227
6.11 Induced Anisotropy	228
Summary	229
Further Reading	229
References	230
Exercises	230
7 Magnetic Domains and the Process of Magnetization	234
7.1 The Domain Postulate	234
7.2 Contributions to the Domain Energy	238
7.2.1 Continuum Approximation of the Exchange Energy	239
7.2.2 Magnetostatic or Demagnetizing Energy (Shape Anisotropy)	241
7.2.3 Magnetocrystalline and Magnetoelastic Energy	244
7.3 The Bloch Wall	245
7.3.1 Wall Energy and its Optimal Thickness	246
7.3.2 Detailed Derivation of the Structure of a 180° Wall	248
7.3.3 90° Domain Walls	254
7.4 Bloch, Néel, and Cross-Tie Walls	257

7.5	Domain Structures in Particular Configurations	260
7.5.1	Thin Films	261
7.5.2	Fine Particles	266
7.6	Coherent Rotation: the Stoner–Wohlfarth Model	271
7.7	Domain Wall Processes	280
7.7.1	Forces on a Domain Wall and the Potential Approximation	281
7.7.2	The Picture Frame Experiment	285
7.7.3	Interaction of Walls with Inclusions	287
7.7.4	Inclusions and Voids	289
7.7.5	Low Energy Domain Walls: the Wall-Bowing Approximation	290
7.7.6	Stress as a Hindrance to Wall Motion	292
7.8	The Magnetization Process	295
7.8.1	Magnetization in High Fields: Approach to Saturation	296
7.8.2	Magnetization in Low Fields: the Rayleigh Regime	297
7.8.3	Domains and the Magnetization Process	298
	Summary	300
	Further Reading	301
	References	301
	Exercises	303
8	Micromagnetic Imaging and Modeling	307
8.1	Introduction	308
8.2	Imaging Stray Magnetic Fields	310
8.2.1	Bitter Pattern Methods	310
8.2.2	Magnetic Force Microscopy	312
8.3	Imaging the Sample Induction Distribution	315
8.3.1	Interactions of Electrons with Magnetic Samples	315
8.3.2	Electron–Specimen Interactions in a TEM	317
8.3.3	Lorentz Microscopy: Fresnel and Foucault Imaging	319
8.3.4	Lorentz Microscopy: Differential Phase Contrast (DPC) Imaging	320
8.3.5	Electron Holography	322
8.3.6	Off-Axis Electron Holography	323
8.3.7	Coherent Foucault Imaging	325
8.3.8	Scanning Electron Microscopy—Types I and II Contrast	326
8.4	Imaging the Magnetization Distribution with Polarization Analysis	328
8.4.1	Secondary Electron Microscopy with Polarization Analysis (SEMPA)	328
8.4.2	Spin-Polarized Low Energy Electron Microscopy (SPLEEM)	331
8.5	Imaging using Sample–Photon Interactions: the Magneto-Optical Effect	333
8.6	Magnetic Imaging with Element Specificity	337
8.6.1	Principles of X-Ray Magnetic Circular Dichroism (XMCD)	338
8.6.2	Transmission X-Ray Microscopy (TXM)	341
8.6.3	X-Ray Photoemission Electron Microscopy (X-PEEM)	342

xii Contents

8.7	Basics of Micromagnetic Modeling	345
8.7.1	Energy Terms	346
8.7.2	Brown's Static Equations	350
8.7.3	Numerical Micromagnetics: the Dynamical Equations	351
	Summary	352
	Further Reading	353
	References	353
9	Fine Particles and Nanostructured Materials	358
9.1	Introduction	358
9.2	Classification of Fine Particles and Nanostructured Materials	360
9.3	Incoherent Magnetization Reversal: the Curling Mode	362
9.4	Superparamagnetism and the Blocking Temperature	364
9.4.1	Determining Size Distribution of Superparamagnetic Particles	370
9.4.2	The Blocking Temperature: Zero-Field-Cooled (ZFC) and Field-Cooled (FC) Measurements	373
9.5	Coercivity of Fine Particles as a Function of Size	375
9.6	Magnetization Dynamics	377
9.7	Finite Size and Surface Effects	382
9.8	Inter-Particle Interactions	388
9.8.1	Magnetic Order Arising from Dipolar Interactions	390
9.8.2	Remanence Measurements and Interaction Effects	392
9.9	Ferrofluids	394
9.10	Response of Fine Particles to Alternating Fields	398
9.11	Mössbauer Spectroscopy	402
	Summary	404
	Further Reading	404
	References	405
10	Magnetic Surfaces, Interfaces, and Thin Films	409
10.1	Introduction	409
10.2	Growth Methods and Modes	410
10.3	Electronic Structure and Magnetism	415
10.3.1	Energy Bands	415
10.3.2	Magnetic Exchange Splitting, δE_{ex} , Excitations, and Transitions	417
10.3.3	Magnetization, Curie Temperature, and Critical Behavior in Low Dimensions	421
10.3.4	Interactions and Coupling	424
10.3.5	Anisotropy and Magnetostriction	426
10.4	Thin Films	428
10.4.1	Metastable Phases	428
10.4.2	Critical Phenomena and Transitions from 3D to 2D Behavior	431

10.5	Magnetism in Two Dimensions: Monolayers, Ultrathin Films, and Interfaces	433
10.5.1	Monolayer Magnetic Moments	433
10.5.2	Surface/Interface Anisotropy and Perpendicular Magnetization	437
10.5.3	Domains and Two-Dimensional Magnetic Phase Transitions	441
10.6	Oscillatory Exchange Coupling	446
10.6.1	Experimental Observations	446
10.6.2	RKKY Description	448
10.6.3	Spin Polarized Quantum Well Description	453
10.7	Exchange Anisotropy/Bias	454
10.8	Exchange Spring	466
	Summary	468
	Further Reading	469
	References	470
11	Hard and Soft Magnets	476
11.1	Introduction	476
11.2	Hysteresis and Operating Criteria for Hard Magnets	480
11.2.1	Demagnetizing Field and the Open Magnetic Circuit	480
11.2.2	Energy Density Product, BH	482
11.3	Magnetic Anisotropy and Mechanisms of Coercivity	484
11.3.1	Phenomenological Discussion	484
11.3.2	Atomic Description	487
11.4	Microstructure and Hard Magnetic Behavior	490
11.4.1	Brown's Paradox	490
11.4.2	Exchange-Spring Magnets and Remanence Enhancement	492
11.5	Soft Magnets	494
11.5.1	Alternating Field Response and Eddy Current Losses	495
11.5.2	Random Anisotropy	497
11.5.3	Nanostructured Materials as a Route to Achieving Soft Magnetic Properties	498
11.6	Survey of Soft and Hard Magnetic Materials	500
11.6.1	Crystalline Soft Magnets	500
11.6.2	Amorphous and Nanocrystalline Soft Magnets	503
11.6.3	AlNiCo Permanent Magnet	505
11.6.4	FeCrCo Magnets	506
11.6.5	Pt-Co and Fe-Pt Alloys	506
11.6.6	Hard Ferrites (Hexaferrites)	508
11.6.7	RE-TM Permanent Magnets: Sm-Co and Fe-Nd-B Alloys	509
	Summary	514
	Further Reading	516
