

Gold Nanoparticles in Analytical Chemistry

Comprehensive Analytical Chemistry

Volume 66

Edited by

Miguel Valcárcel and Ángela I. López-Lorente

Department of Analytical Chemistry

University of Córdoba

Córdoba, Spain

ELSEVIER

AMSTERDAM • BOSTON • HEIDELBERG • LONDON • NEW YORK • OXFORD
PARIS • SAN DIEGO • SAN FRANCISCO • SINGAPORE • SYDNEY • TOKYO

Contents

Contributors to Volume 66	xv
Series Editor's Preface	xix
Volume Editor's Preface	xxi

Part I Generalities

1. Analytical Nanoscience and Nanotechnology	
<i>Ángela Inmaculada López-Lorente and Miguel Valcárcel</i>	
1. Contextualization	4
1.1 Definitions	4
1.2 Classifications	5
1.3 Synthesis of Nanoparticles	6
1.4 Types of Nanoparticles	7
1.5 Properties of Nanoparticles	12
2. Introduction to Analytical Nanoscience and Nanotechnology	13
2.1 Facets of Analytical Nanoscience and Nanotechnology	13
2.2 Types of Analytical Systems	13
2.3 Evolution and Limit of Analytical Nanoscience and Nanotechnology	17
2.4 Ethical and Social Implications	18
3. Use of Nanoparticles as Tools in Analytical Processes	19
3.1 Objectives	19
3.2 Sample Treatment: Purification and Preconcentration of Analytes	20
3.3 Improvement of Chromatographic and Electrophoretic Separations	22
3.4 Improvement of Detection Processes	23
4. Analysis of Nanoparticles and Nanostructured Material	23
4.1 Information from the Nanoworld	23
4.2 Determination and Characterization of Nanoparticles	24
4.3 Microscopic Techniques	25
4.4 Separation Techniques	26
4.5 Spectroscopic Techniques	27
4.6 Other Techniques	29
4.7 Nanometrology	30

5. Final Remarks	30
Acknowledgment	31
References	31
2. Synthesis of Gold Nanoparticles	
<i>Han-Wen Cheng, Zakiya R. Skeete, Elizabeth R. Crew, Shiyao Shan, Jin Luo and Chuan-Jian Zhong</i>	
1. Introduction	37
2. Synthesis of Gold Nanoparticles in Aqueous Phase	41
2.1 Seeded and Aggregative Growth	41
2.2 Optical and Spectroscopic Properties of Au NPs in Correlation with Particle Size	48
3. Synthesis of Gold Nanoparticles in Organic Phase	53
3.1 Thermally Activated Size Evolution via Aggregative Growth	53
3.2 Molecularly Tuned Size Selectivity in Aggregative Growth via Capping Molecules	57
4. Applications of Gold Nanoparticles in Analytical Chemistry	63
4.1 Enhanced SERS Detection of Bacteria Biomarker and DNA Bioactivities	63
4.2 MicroRNA Conjugation for Cell Transfection	68
4.3 Interparticle Assemblies for Detection of Amino Acids	70
5. Summary	73
Acknowledgment	74
References	74
3. Physico-Chemical Characteristics of Gold Nanoparticles	
<i>Vincenzo Amendola, Moreno Meneghetti, Mauro Stener, Yan Guo, Shaowei Chen, Patricia Crespo, Miguel Angel García, Antonio Hernando, Paolo Pengo and Lucia Pasquato</i>	
1. Introduction	82
1.1 Physical Properties, Chemical Properties, and Their Size Dependence	84
2. Optical Properties	84
2.1 Origin of the Surface Plasmon Absorption	84
2.2 Specific Phenomena Influencing the Surface Plasmon Absorption	86
2.3 Sensing by Surface Plasmon Absorption	88
2.4 Surface-Enhanced Raman Scattering and Local Field Enhancement	89
2.5 Modeling of the Optical Properties	92
2.6 Surface Plasmon Radiative Dynamics	93
2.7 Plasmonic Modulation of Molecular Fluorescence	94
2.8 Nonlinear Optics of Metal Nanoparticles	95

3. Quantum Chemistry of Electronic and Optical Properties	98
3.1 Introduction	98
3.2 Electronic Structure of Gold Clusters: Quantum Chemical Methods, Relativistic Effects, and Convergence Behavior	100
3.3 Photoabsorption: Description of the Phenomenon, Plasmons, Size, and Shape Effects	103
4. Quantized Charge Transfer of Nanoparticle Molecules and Ensembles	107
4.1 Introduction	107
4.2 STM-Based Coulomb Staircase of Single Nanoparticles	108
4.3 Electrochemical Quantized Charging	110
4.4 Summary and Perspectives	116
5. Magnetism in Gold Nanoparticles	117
5.1 Introduction	117
5.2 Experimental Studies	118
5.3 Origin of the Magnetic Moment	123
5.4 First Principle Calculations	124
5.5 Magnetic Moment of an Electron Gas Confined on a Spherical Surface	126
5.6 Final Remarks	129
6. Chemical Properties	129
6.1 Introduction	129
6.2 Surface Properties of Nanosize Gold	130
6.3 Catalytic Activity	135
6.4 Characteristics and Properties of Monolayers Grafted on the Gold Surface	139
7. Concluding Remarks	146
Acknowledgment	146
References	147
4. Derivatization of Colloidal Gold Nanoparticles Toward Their Application in Life Sciences	
<i>Dominik Hühn and Wolfgang J. Parak</i>	
1. Introduction	154
1.1 Physicochemical Properties of Gold Nanoparticles	154
1.2 Other Inorganic Nanoparticles	156
1.3 Colloidal Stabilization—Phase Transfer	158
1.4 Functionalization Toward Biological Applications	159
1.5 Health and Environmental Aspects	162
2. Synthesis and Characterization of Functional Nanoparticles Toward Biological Applications	163
2.1 Synthesis of Inorganic Gold Nanoparticles	163
2.2 Phase Transfer	165
2.3 Colloidal Characterization and Purification of Nanoparticles	167
2.4 Characterization of Nanoparticles via pH Titration	170

2.5	Charge-Dependent Interaction of Nanoparticles with Biological Systems	175
2.6	Nanoparticles for Ion Sensing	187
3.	Conclusions and Outlook	192
	List of Abbreviations	194
	Acknowledgment	196
	References	196
5.	Toxicity of Gold Nanoparticles	
	<i>Encarnación Caballero-Díaz and Miguel Valcárcel</i>	
1.	Introduction	208
1.1	Incentives to Assess the Toxicity of Nanoparticles	208
2.	Gold Nanoparticles in the Biological Field	208
2.1	Properties of Gold Nanoparticles	208
2.2	Biofunctionalization	210
2.3	Biomedical Applications	211
3.	Toxicity of Gold Nanoparticles	217
3.1	Cellular Uptake Processes	217
3.2	Methods to Determine the Nanoparticle Uptake	221
3.3	Intracellular Fate	221
3.4	Influential Factors	222
3.5	Main Routes of Human Exposure	226
3.6	Mechanisms of Toxicity	227
4.	Methods for Toxicity Assessment	233
4.1	In Vitro Assays	233
4.2	In Vivo Assays	238
5.	Limitations in Toxicity Studies	244
5.1	Nanoparticle Characterization	244
5.2	Interferences with Assays	247
5.3	Conditions for Assessing In vivo	248
	Acknowledgment	248
	References	248

Part II

Gold Nanoparticles as Target Analytes: Characterization and Determination of Gold Nanoparticles

6. Microscopic Techniques for the Characterization of Gold Nanoparticles

Christine Kranz and Boris Mizaikoff

1.	Introduction	257
2.	Optical Microscopy	262
2.1	Dark-Field Microscopy	262
2.2	Other Optical Techniques	264

3. Electron Microscopy	265
3.1 High-Resolution Scanning Electron Microscopy	266
3.2 Transmission Electron Microscopy	267
3.3 Scanning Transmission Electron Microscopy	272
4. Scanning Probe Microscopy	275
4.1 Scanning Tunneling Microscopy	276
4.2 Atomic Force Microscopy	279
4.3 Near-Field Scanning Optical Microscopy	285
4.4 Scanning Electrochemical Microscopy	286
5. Conclusions	289
List of Abbreviations	290
References	291
7. Spectroscopic Techniques for Characterization of Gold Nanoparticles	
<i>Georg Ramer and Bernhard Lendl</i>	
1. Electromagnetic Modes of Gold Nanoparticles	301
1.1 Mie Theory	302
1.2 Gans Theory	303
1.3 Numerical Methods	305
1.4 Optical Constants of Gold Nanoparticles	305
2. Photon-Based Techniques	307
2.1 UV–VIS Transmission Spectroscopy	307
2.2 Spatial Modulation Spectroscopy	311
2.3 Dark-Field Microscopy	312
2.4 Scanning Near-Field Optical Microscopy	313
2.5 Dynamic Light Scattering	315
2.6 Other Photon-Based Techniques	319
3. Electron-Based Techniques	319
3.1 Interaction of Nanoparticles and Electron Beams	320
3.2 Scanning Transmission Electron Microscopy Electron Energy-Loss Spectroscopy and Energy Filtered Transmission Electron Microscopy Electron Energy-Loss Spectroscopy	320
3.3 Cathodoluminescence (CL)	323
4. Summary	323
4.1 Comparison of Methods	323
References	325
8. Mass Spectrometry for the Characterization of Gold Nanoparticles	
<i>Laura Trapiella-Alfonso, José M. Costa-Fernández, Jorge Ruiz Encinar, Rosario Pereiro and Alfredo Sanz-Medel</i>	
1. Mass Spectrometry in Nanotechnology	330
2. Elemental Mass Spectrometry	333

2.1 Inductively Coupled Plasma—Mass Spectrometry for Elemental Characterization of Engineering Gold Nanoparticles	333
3. Hyphenated Techniques with Elemental Mass Spectrometry	340
3.1 Liquid Chromatography	341
3.2 Differential Mobility Analysis	343
3.3 Flow-Field Fractionation	345
4. Molecular Mass Spectrometry	346
4.1 Matrix-Assisted Laser Desorption/Ionization	346
4.2 Electrospray Ionization	349
5. A Forward Look into the Future of Mass Spectrometry in the Nanoworld	350
Acknowledgment	352
References	352

9. Separation Techniques of Gold Nanoparticles

Ángela Inmaculada López-Lorente and Miguel Valcárcel

1. Introduction	358
1.1 Separation of Nanoparticles in Analytical Nanoscience and Nanotechnology	358
1.2 Most Usual Separation Techniques	358
2. Electrophoresis	359
2.1 Introduction	359
2.2 Capillary Electrophoresis	360
2.3 Gel Electrophoresis	366
2.4 Dielectrophoresis	368
2.5 Other Electrophoretic Techniques	370
3. Field-Flow Fractionation	371
3.1 Introduction	371
3.2 Types of FFF Techniques	374
3.3 Application to the Separation of GNPs	375
4. Chromatographic Techniques	377
4.1 Introduction	377
4.2 Size-Exclusion Chromatography	378
4.3 Liquid Chromatography	381
4.4 Hydrodynamic Chromatography	383
4.5 Other Chromatographic Techniques	383
5. Other Separation Techniques	384
5.1 Centrifugation	384
5.2 Extraction	385
5.3 Cloud-Point Extraction	386
5.4 Filtration	388
5.5 Precipitation	388
Acknowledgment	390
References	390

10. Determination of Gold Nanoparticles in Biological, Environmental, and Agrifood Samples	
<i>Ángela Inmaculada López-Lorente and Miguel Valcárcel</i>	
1. Introduction	395
2. Analytical Requirements	397
3. Analytical Tools and Procedures for the Analysis of AuNPs	399
3.1 Microscopic Techniques	399
3.2 Spectroscopic Techniques	402
3.3 Separation Techniques	407
3.4 Other Techniques	408
4. Determination of AuNPs in Environmental Samples	410
4.1 Occurrence and Fate of NPs in the Environment	410
4.2 Representative Examples	411
5. Determination of AuNPs in Biological Matrices	413
5.1 Effects of NPs in Biological Systems	413
5.2 Representative Examples	416
6. Determination of AuNPs in Agrifood Samples	419
6.1 Nanotechnology Applications in Agriculture and Food	419
6.2 Representative Examples	420
7. Trends	421
Acknowledgment	422
References	422

Part III

Gold Nanoparticles as Analytical Tools

11. Applications of Gold Nanoparticles in Electroanalysis

Marek Trojanowicz

1. Introduction	429
2. Gold Nanoparticles in Electrochemistry: Beginnings	430
3. Kinds of Gold Nanostructures Employed in Electrochemical Sensors	431
4. Deposition of AuNPs on the Surface and in the Bulk Material of Electrodes	434
5. Electrodeposition of AuNPs for Electrochemical Applications	442
6. Gold Nanoparticles as Probes in Electrochemical Biosensing	445
7. Electrochemical Sensing Employing AuNPs with Different Detection Methods	453
7.1 Potentiometry	453
7.2 Voltammetry	457
7.3 Amperometry	462

7.4 Impedance Spectroscopy, Electrochemiluminescence, and Other Detection Methods	466
8. Conclusions	470
List of Abbreviations	471
References	471

12. Spectroscopic Techniques Based on the Use of Gold Nanoparticles

María Jesús Almendral Parra and Sara Sánchez Paradinas

1. Introduction: Optical Properties of Gold Nanoparticles as a Starting Point for Use in Spectroscopic Techniques	478
1.1 Surface Plasmon Resonance	479
1.2 Surface-Enhanced Raman Scattering	481
1.3 Size- and Shape-Based Colorimetric Variations	482
1.4 Enhanced Optical Properties of Gold Nanoparticles by Surface Functionalization	485
2. Gold Nanoparticles as the Basis of Spectrophotometric Methods of Determination	486
2.1 Absorption-Based Colorimetric Sensing/Sensing Approaches Based on NP Aggregation (Colorimetric Assays)	488
2.2 Surface Plasmon of Gold Nanoparticles as Probes for the Detection of Analytes	494
2.3 SERS-Based Sensing	500
3. Application of Gold Nanoparticles in the Development of Fluorescence-Based Methodologies	502
3.1 Functionalized Gold Nanoparticles as Fluorophores	504
3.2 Quenching Processes	505
3.3 FRET Mechanisms	506
3.4 Surface-Modified Fluorescence	507
3.5 Fluorescent Gold Nanostructures for the Detection of Analytes: Representative Examples	507
4. Gold Nanoparticles in Phosphorescence Processes	509
4.1 Complex Formation of Functionalized Gold Nanoparticles with Eu(III)/Tb(III)	510
5. Applications of Gold Nanoparticles in Chemiluminescence Reactions	511
5.1 AuNPs as Catalysts in CL Reactions in the Luminol–H ₂ O ₂ System	513
5.2 Chemiluminescence Immunoassays	514
5.3 CL-Hybridization Assays	515
5.4 Chemiluminescence-Resonance-Energy Transfer	518
6. General Conclusions to This Chapter	520
Acknowledgment	522
References	522

13. Gold Nanoparticles as (Bio)Chemical Sensors

Miguel Peixoto de Almeida, Eulália Pereira, Pedro Baptista, Inês Gomes, Sara Figueiredo, Leonor Soares, and Ricardo Franco

1. Introduction	530
2. Sensors Based on Colorimetric Sensing	532
2.1 Detection of Small Molecules	533
2.2 DNA/RNA Applications	536
2.3 Applications to Protein/Antigen Detection	537
3. Gold Nanoparticle-Based Biobarcode Assay	538
4. Sensors Based on Fluorescence-Related Phenomena	541
4.1 Förster Resonance Energy Transfer-Based Detection	541
4.2 Fluorophores and AuNPs	542
4.3 Quantum Dots and AuNPs	543
5. Electrical and Electrochemical Sensing	545
5.1 AuNP-Based Electrochemical Biosensors	545
5.2 AuNPs in Quartz Crystal Microbalance-Based Sensing	549
6. AuNP-Based Surface Plasmon Resonance Sensors	552
6.1 Sensors Based on Change in Localized SPR of AuNPs	552
6.2 AuNP-Mediated SPR Signal Amplification	553
6.3 Sensors Based on AuNPs Plasmon Resonance Scattering	555
7. Surface-Enhanced Raman Scattering-Based Sensing	556
7.1 SERS Based on Spherical AuNPs in Solution	557
7.2 SERS Based on Anisotropic AuNPs in Solution	559
8. Conclusions and Future Perspectives	560
List of Abbreviations	561
Acknowledgments	561
References	562

14. Lateral Flow Biosensors Based on Gold Nanoparticles

Lourdes Rivas, Alfredo de la Escosura-Muñiz, Josefina Pons, and Arben Merkoçi

1. General Introduction: Historical Perspective	569
2. LF Technology and Its Format Assays	571
2.1 Operation Principles	571
2.2 Components	572
2.3 LF Assay Advantages and Limitations	577
3. Gold Nanoparticle-Based LF Biosensors	578
3.1 Protein Detection	579
3.2 Nucleic Acids	581
3.3 Mycotoxins	586
3.4 Pesticides	588
3.5 Heavy Metals	590
4. New Trends in LF Technology	592
4.1 Amplification Strategies	592
4.2 Multianalyte Detection	595

xiv Contents

4.3	Integration of Novel Materials	596
4.4	Integration with Electrochemistry	598
5.	Conclusions and Future Perspectives	599
	Acknowledgment	601
	References	601
	Index	607
