Preface to the Second Edition	xvi
Preface to the First Edition	xviii
Acknowledgments for the Second Edition	xxvi
Acknowledgments for the First Edition	xxvii
<b>1 Some Essential Notation</b>	<b>1</b>
<b>2 Signals, Integrals, and Sets of Measure Zero</b>	<b>4</b>
2.1 Introduction . . . . .	4
2.2 Integrals . . . . .	4
2.3 Integrating Complex-Valued Signals . . . . .	5
2.4 An Inequality for Integrals . . . . .	6
2.5 Sets of Lebesgue Measure Zero . . . . .	7
2.6 Swapping Integration, Summation, and Expectation . . . . .	10
2.7 Additional Reading . . . . .	11
2.8 Exercises . . . . .	11
<b>3 The Inner Product</b>	<b>14</b>
3.1 The Inner Product . . . . .	14
3.2 When Is the Inner Product Defined? . . . . .	17
3.3 The Cauchy-Schwarz Inequality . . . . .	18
3.4 Applications . . . . .	20
3.5 The Cauchy-Schwarz Inequality for Random Variables . . . . .	23
3.6 Mathematical Comments . . . . .	23
3.7 Exercises . . . . .	24
<b>4 The Space <math>\mathcal{L}_2</math> of Energy-Limited Signals</b>	<b>27</b>
4.1 Introduction . . . . .	27
4.2 $\mathcal{L}_2$ as a Vector Space . . . . .	27
4.3 Subspace, Dimension, and Basis . . . . .	29
4.4 $\ u\ _2$ as the “length” of the Signal $u(\cdot)$ . . . . .	31
4.5 Orthogonality and Inner Products . . . . .	33
4.6 Orthonormal Bases . . . . .	37
4.7 The Space $L_2$ . . . . .	49

4.8	Additional Reading . . . . .	51
4.9	Exercises . . . . .	51
<b>5</b>	<b>Convolutions and Filters</b>	<b>54</b>
5.1	Introduction . . . . .	54
5.2	Time Shifts and Reflections . . . . .	54
5.3	The Convolution Expression . . . . .	55
5.4	Thinking About the Convolution . . . . .	55
5.5	When Is the Convolution Defined? . . . . .	56
5.6	Basic Properties of the Convolution . . . . .	58
5.7	Filters . . . . .	59
5.8	The Matched Filter . . . . .	59
5.9	The Ideal Unit-Gain Lowpass Filter . . . . .	61
5.10	The Ideal Unit-Gain Bandpass Filter . . . . .	62
5.11	Young's Inequality . . . . .	62
5.12	Additional Reading . . . . .	62
5.13	Exercises . . . . .	62
<b>6</b>	<b>The Frequency Response of Filters and Bandlimited Signals</b>	<b>65</b>
6.1	Introduction . . . . .	65
6.2	Review of the Fourier Transform . . . . .	65
6.3	The Frequency Response of a Filter . . . . .	77
6.4	Bandlimited Signals and Lowpass Filtering . . . . .	80
6.5	Bandlimited Signals Through Stable Filters . . . . .	90
6.6	The Bandwidth of a Product of Two Signals . . . . .	91
6.7	Bernstein's Inequality . . . . .	94
6.8	Time-Limited and Bandlimited Signals . . . . .	94
6.9	A Theorem by Paley and Wiener . . . . .	97
6.10	Picket Fences and Poisson Summation . . . . .	97
6.11	Additional Reading . . . . .	99
6.12	Exercises . . . . .	100
<b>7</b>	<b>Passband Signals and Their Representation</b>	<b>104</b>
7.1	Introduction . . . . .	104
7.2	Baseband and Passband Signals . . . . .	104
7.3	Bandwidth around a Carrier Frequency . . . . .	107
7.4	Real Passband Signals . . . . .	111
7.5	The Analytic Signal . . . . .	112
7.6	Baseband Representation of Real Passband Signals . . . . .	119
7.7	Energy-Limited Passband Signals . . . . .	133
7.8	Shifting to Passband and Convolution . . . . .	141
7.9	Mathematical Comments . . . . .	142
7.10	Exercises . . . . .	142
<b>8</b>	<b>Complete Orthonormal Systems and the Sampling Theorem</b>	<b>147</b>
8.1	Introduction . . . . .	147
8.2	Complete Orthonormal System . . . . .	147
8.3	The Fourier Series . . . . .	151

8.4	The Sampling Theorem . . . . .	152
8.5	The Samples of the Convolution . . . . .	156
8.6	Closed Subspaces of $\mathcal{L}_2$ . . . . .	156
8.7	An Isomorphism . . . . .	161
8.8	Prolate Spheroidal Wave Functions . . . . .	161
8.9	Exercises . . . . .	162
<b>9</b>	<b>Sampling Real Passband Signals</b>	<b>168</b>
9.1	Introduction . . . . .	168
9.2	Complex Sampling . . . . .	169
9.3	Reconstructing $x_{PB}$ from its Complex Samples . . . . .	170
9.4	Exercises . . . . .	173
<b>10</b>	<b>Mapping Bits to Waveforms</b>	<b>176</b>
10.1	What Is Modulation? . . . . .	176
10.2	Modulating One Bit . . . . .	177
10.3	From Bits to Real Numbers . . . . .	178
10.4	Block-Mode Mapping of Bits to Real Numbers . . . . .	179
10.5	From Real Numbers to Waveforms with Linear Modulation . . . . .	181
10.6	Recovering the Signal Coefficients with a Matched Filter . . . . .	182
10.7	Pulse Amplitude Modulation . . . . .	184
10.8	Constellations . . . . .	185
10.9	Uncoded Transmission . . . . .	187
10.10	Bandwidth Considerations . . . . .	188
10.11	Design Considerations . . . . .	189
10.12	Some Implementation Considerations . . . . .	191
10.13	Exercises . . . . .	193
<b>11</b>	<b>Nyquist's Criterion</b>	<b>195</b>
11.1	Introduction . . . . .	195
11.2	The Self-Similarity Function of Energy-Limited Signals . . . . .	196
11.3	Nyquist's Criterion . . . . .	199
11.4	The Self-Similarity Function of Integrable Signals . . . . .	208
11.5	Exercises . . . . .	208
<b>12</b>	<b>Stochastic Processes: Definition</b>	<b>213</b>
12.1	Introduction and Continuous-Time Heuristics . . . . .	213
12.2	A Formal Definition . . . . .	214
12.3	Describing Stochastic Processes . . . . .	216
12.4	Additional Reading . . . . .	216
12.5	Exercises . . . . .	217
<b>13</b>	<b>Stationary Discrete-Time Stochastic Processes</b>	<b>219</b>
13.1	Introduction . . . . .	219
13.2	Stationary Processes . . . . .	219
13.3	Wide-Sense Stationary Stochastic Processes . . . . .	220
13.4	Stationarity and Wide-Sense Stationarity . . . . .	221
13.5	The Autocovariance Function . . . . .	222

13.6	The Power Spectral Density Function . . . . .	224
13.7	The Spectral Distribution Function . . . . .	228
13.8	Exercises . . . . .	229
<b>14</b>	<b>Energy and Power in PAM</b>	<b>232</b>
14.1	Introduction . . . . .	232
14.2	Energy in PAM . . . . .	232
14.3	Defining the Power in PAM . . . . .	235
14.4	On the Mean of Transmitted Waveforms . . . . .	237
14.5	Computing the Power in PAM . . . . .	238
14.6	A More Formal Account . . . . .	249
14.7	Exercises . . . . .	253
<b>15</b>	<b>Operational Power Spectral Density</b>	<b>257</b>
15.1	Introduction . . . . .	257
15.2	Motivation . . . . .	258
15.3	Defining the Operational PSD . . . . .	262
15.4	The Operational PSD of Real PAM Signals . . . . .	266
15.5	A More Formal Account . . . . .	270
15.6	Operational PSD and Average Autocovariance Function . . . . .	276
15.7	The Operational PSD of a Filtered Stochastic Process . . . . .	283
15.8	The Operational PSD and Power . . . . .	285
15.9	Exercises . . . . .	292
<b>16</b>	<b>Quadrature Amplitude Modulation</b>	<b>295</b>
16.1	Introduction . . . . .	295
16.2	PAM for Passband? . . . . .	296
16.3	The QAM Signal . . . . .	297
16.4	Bandwidth Considerations . . . . .	299
16.5	Orthogonality Considerations . . . . .	300
16.6	Spectral Efficiency . . . . .	303
16.7	QAM Constellations . . . . .	303
16.8	Recovering the Complex Symbols via Inner Products . . . . .	305
16.9	Filtering QAM Signals . . . . .	309
16.10	Exercises . . . . .	311
<b>17</b>	<b>Complex Random Variables and Processes</b>	<b>314</b>
17.1	Introduction . . . . .	314
17.2	Notation . . . . .	315
17.3	Complex Random Variables . . . . .	316
17.4	Complex Random Vectors . . . . .	323
17.5	Discrete-Time Complex Stochastic Processes . . . . .	328
17.6	Limits of Proper Complex Random Variables . . . . .	334
17.7	On the Eigenvalues of Large Toeplitz Matrices . . . . .	337
17.8	Exercises . . . . .	337
<b>18</b>	<b>Energy, Power, and PSD in QAM</b>	<b>341</b>
18.1	Introduction . . . . .	341

18.2	The Energy in QAM . . . . .	341
18.3	The Power in QAM . . . . .	344
18.4	The Operational PSD of QAM Signals . . . . .	349
18.5	A Formal Account of Power in Passband and Baseband . . . . .	354
18.6	A Formal Account of the PSD in Baseband and Passband . . . . .	361
18.7	Exercises . . . . .	370
<b>19</b>	<b>The Univariate Gaussian Distribution</b>	<b>373</b>
19.1	Introduction . . . . .	373
19.2	Standard Gaussian Random Variables . . . . .	373
19.3	Gaussian Random Variables . . . . .	375
19.4	The $Q$ -Function . . . . .	378
19.5	Integrals of Exponentiated Quadratics . . . . .	382
19.6	The Moment Generating Function . . . . .	383
19.7	The Characteristic Function of Gaussians . . . . .	384
19.8	Central and Noncentral Chi-Square Random Variables . . . . .	386
19.9	The Limit of Gaussians Is Gaussian . . . . .	390
19.10	Additional Reading . . . . .	392
19.11	Exercises . . . . .	392
<b>20</b>	<b>Binary Hypothesis Testing</b>	<b>395</b>
20.1	Introduction . . . . .	395
20.2	Problem Formulation . . . . .	395
20.3	Guessing in the Absence of Observables . . . . .	397
20.4	The Joint Law of $H$ and $\mathbf{Y}$ . . . . .	398
20.5	Guessing after Observing $\mathbf{Y}$ . . . . .	400
20.6	Randomized Decision Rules . . . . .	403
20.7	The MAP Decision Rule . . . . .	405
20.8	The ML Decision Rule . . . . .	407
20.9	Performance Analysis: the Bhattacharyya Bound . . . . .	408
20.10	Example . . . . .	408
20.11	(Nontelepathic) Processing . . . . .	411
20.12	Sufficient Statistics . . . . .	416
20.13	Implications of Optimality . . . . .	424
20.14	Multi-Dimensional Binary Gaussian Hypothesis Testing . . . . .	425
20.15	Guessing in the Presence of a Random Parameter . . . . .	431
20.16	Mathematical Notes . . . . .	433
20.17	Exercises . . . . .	433
<b>21</b>	<b>Multi-Hypothesis Testing</b>	<b>441</b>
21.1	Introduction . . . . .	441
21.2	The Setup . . . . .	441
21.3	Optimal Guessing . . . . .	442
21.4	Example: Multi-Hypothesis Testing for 2D Signals . . . . .	447
21.5	The Union-of-Events Bound . . . . .	451
21.6	Multi-Dimensional $M$ -ary Gaussian Hypothesis Testing . . . . .	458
21.7	Additional Reading . . . . .	464
21.8	Exercises . . . . .	464

<b>22 Sufficient Statistics</b>	<b>468</b>
22.1 Introduction . . . . .	468
22.2 Definition and Main Consequence . . . . .	469
22.3 Equivalent Conditions . . . . .	471
22.4 Identifying Sufficient Statistics . . . . .	481
22.5 Sufficient Statistics for the M-ary Gaussian Problem . . . . .	485
22.6 Irrelevant Data . . . . .	487
22.7 Testing with Random Parameters . . . . .	489
22.8 Additional Reading . . . . .	491
22.9 Exercises . . . . .	491
<b>23 The Multivariate Gaussian Distribution</b>	<b>494</b>
23.1 Introduction . . . . .	494
23.2 Notation and Preliminaries . . . . .	495
23.3 Some Results on Matrices . . . . .	497
23.4 Random Vectors . . . . .	503
23.5 A Standard Gaussian Vector . . . . .	509
23.6 Gaussian Random Vectors . . . . .	510
23.7 Jointly Gaussian Vectors . . . . .	523
23.8 Moments and Wick's Formula . . . . .	527
23.9 The Limit of Gaussian Vectors Is a Gaussian Vector . . . . .	528
23.10 Conditionally-Independent Gaussian Vectors . . . . .	529
23.11 Additional Reading . . . . .	533
23.12 Exercises . . . . .	534
<b>24 Complex Gaussians and Circular Symmetry</b>	<b>540</b>
24.1 Introduction . . . . .	540
24.2 Scalars . . . . .	540
24.3 Vectors . . . . .	548
24.4 Exercises . . . . .	558
<b>25 Continuous-Time Stochastic Processes</b>	<b>560</b>
25.1 Notation . . . . .	560
25.2 The Finite-Dimensional Distributions . . . . .	560
25.3 Definition of a Gaussian SP . . . . .	563
25.4 Stationary Continuous-Time Processes . . . . .	564
25.5 Stationary Gaussian Stochastic Processes . . . . .	566
25.6 Properties of the Autocovariance Function . . . . .	568
25.7 The Power Spectral Density of a Continuous-Time SP . . . . .	571
25.8 The Spectral Distribution Function . . . . .	573
25.9 The Average Power . . . . .	576
25.10 Stochastic Integrals and Linear Functionals . . . . .	578
25.11 Linear Functionals of Gaussian Processes . . . . .	585
25.12 The Joint Distribution of Linear Functionals . . . . .	591
25.13 Filtering WSS Processes . . . . .	594
25.14 The PSD Revisited . . . . .	600
25.15 White Gaussian Noise . . . . .	603
25.16 Exercises . . . . .	613

<b>26</b>	<b>Detection in White Gaussian Noise</b>	<b>620</b>
26.1	Introduction . . . . .	620
26.2	Setup . . . . .	620
26.3	From a Stochastic Process to a Random Vector . . . . .	621
26.4	The Random Vector of Inner Products . . . . .	626
26.5	Optimal Guessing Rule . . . . .	628
26.6	Performance Analysis . . . . .	632
26.7	The Front-End Filter . . . . .	634
26.8	Detection in Passband . . . . .	637
26.9	Some Examples . . . . .	638
26.10	Detection in Colored Gaussian Noise . . . . .	652
26.11	Multiple Antennas . . . . .	662
26.12	Detecting Signals of Infinite Bandwidth . . . . .	664
26.13	Exercises . . . . .	665
<b>27</b>	<b>Noncoherent Detection and Nuisance Parameters</b>	<b>670</b>
27.1	Introduction and Motivation . . . . .	670
27.2	The Setup . . . . .	672
27.3	From a SP to a Random Vector . . . . .	673
27.4	The Conditional Law of the Random Vector . . . . .	675
27.5	An Optimal Detector . . . . .	678
27.6	The Probability of Error . . . . .	680
27.7	Discussion . . . . .	681
27.8	Extension to $M \geq 2$ Signals . . . . .	683
27.9	Exercises . . . . .	685
<b>28</b>	<b>Detecting PAM and QAM Signals in White Gaussian Noise</b>	<b>688</b>
28.1	Introduction and Setup . . . . .	688
28.2	A Random Vector and Its Conditional Law . . . . .	689
28.3	Other Optimality Criteria . . . . .	691
28.4	Consequences of Orthonormality . . . . .	693
28.5	Extension to QAM Communications . . . . .	696
28.6	Additional Reading . . . . .	703
28.7	Exercises . . . . .	703
<b>29</b>	<b>Linear Binary Block Codes with Antipodal Signaling</b>	<b>707</b>
29.1	Introduction and Setup . . . . .	707
29.2	The Binary Field $\mathbb{F}_2$ and the Vector Space $\mathbb{F}_2^k$ . . . . .	708
29.3	Binary Linear Encoders and Codes . . . . .	711
29.4	Binary Encoders with Antipodal Signaling . . . . .	714
29.5	Power and Operational Power Spectral Density . . . . .	715
29.6	Performance Criteria . . . . .	719
29.7	Minimizing the Block Error Rate . . . . .	720
29.8	Minimizing the Bit Error Rate . . . . .	725
29.9	Assuming the All-Zero Codeword . . . . .	729
29.10	System Parameters . . . . .	734
29.11	Hard vs. Soft Decisions . . . . .	735
29.12	The Varshamov and Singleton Bounds . . . . .	735

29.13	Additional Reading . . . . .	736
29.14	Exercises . . . . .	737
<b>30</b>	<b>The Radar Problem</b>	<b>740</b>
30.1	The Setup . . . . .	740
30.2	The Radar and the Knapsack Problems . . . . .	746
30.3	Pareto-Optimality and Linear Functionals . . . . .	747
30.4	One Type of Error Is Not Allowed . . . . .	748
30.5	Likelihood-Ratio Tests . . . . .	751
30.6	A Gaussian Example . . . . .	759
30.7	Detecting a Signal in White Gaussian Noise . . . . .	760
30.8	Sufficient Statistics . . . . .	762
30.9	A Noncoherent Detection Problem . . . . .	763
30.10	Randomization Is Not Needed . . . . .	768
30.11	The Big Picture . . . . .	772
30.12	Relative Entropy . . . . .	776
30.13	Additional Reading . . . . .	781
30.14	Exercises . . . . .	781
<b>31</b>	<b>A Glimpse at Discrete-Time Signal Processing</b>	<b>786</b>
31.1	Discrete-Time Filters . . . . .	786
31.2	Processing Discrete-Time Stochastic Processes . . . . .	789
31.3	Discrete-Time Whitening Filters . . . . .	794
31.4	Processing Discrete-Time Complex Processes . . . . .	797
31.5	Additional Reading . . . . .	801
31.6	Exercises . . . . .	801
<b>32</b>	<b>Intersymbol Interference</b>	<b>803</b>
32.1	The Linearly-Dispersive Channel . . . . .	803
32.2	PAM on the ISI Channel . . . . .	803
32.3	Guessing the Data Bits . . . . .	807
32.4	QAM on the ISI Channel . . . . .	818
32.5	From Passband to Baseband . . . . .	823
32.6	Additional Reading . . . . .	827
32.7	Exercises . . . . .	828
<b>A</b>	<b>On the Fourier Series</b>	<b>830</b>
A.1	Introduction and Preliminaries . . . . .	830
A.2	Reconstruction in $\mathcal{L}_1$ . . . . .	832
A.3	Geometric Considerations . . . . .	835
A.4	Pointwise Reconstruction . . . . .	839
<b>B</b>	<b>On the Discrete-Time Fourier Transform</b>	<b>841</b>
<b>C</b>	<b>Positive Definite Functions</b>	<b>845</b>
<b>D</b>	<b>The Baseband Representation of Passband Stochastic Processes</b>	<b>848</b>
	<b>Bibliography</b>	<b>858</b>

<b>Theorems Referenced by Name</b>	<b>864</b>
<b>Abbreviations</b>	<b>865</b>
<b>List of Symbols</b>	<b>866</b>
<b>Index</b>	<b>875</b>
