

Molecules in Electromagnetic Fields

From Ultracold Physics to Controlled Chemistry

Roman V. Krems

Contents in Brief

- 1 Introduction to Rotational, Fine, and Hyperfine Structure of Molecular Radicals 1
- 2 DC Stark Effect 35
- 3 Zeeman Effect 59
- 4 AC Stark Effect 81
- 5 Molecular Rotations Under Control 121
- 6 External Field Traps 145
- 7 Molecules in Superimposed Fields 175
- 8 Molecular Collisions in External Fields 187
- 9 Matrix Elements of Collision Hamiltonians 217
- 10 Field-Induced Scattering Resonances 239
- 11 Field Control of Molecular Collisions 257
- 12 Ultracold Controlled Chemistry 283

Contents

List of Figures	<i>xiii</i>
List of Tables	<i>xxv</i>
Preface	<i>xxvii</i>
Acknowledgments	<i>xxxii</i>

1	Introduction to Rotational, Fine, and Hyperfine Structure of Molecular Radicals	1
1.1	Why Molecules are Complex	1
1.2	Separation of Scales	3
1.2.1	Electronic Energy	5
1.2.2	Vibrational Energy	10
1.2.3	Rotational and Fine Structure	14
1.3	Rotation of a Molecule	17
1.4	Hund's Cases	21
1.4.1	Hund's Coupling Case (a)	21
1.4.2	Hund's Coupling Case (b)	22
1.4.3	Hund's Coupling Case (c)	23
1.5	Parity of Molecular States	23
1.6	General Notation for Molecular States	27
1.7	Hyperfine Structure of Molecules	28
1.7.1	Magnetic Interactions with Nuclei	28
1.7.2	Fermi Contact Interaction	29
1.7.3	Long-Range Magnetic Dipole Interaction	30
1.7.4	Electric Quadrupole Hyperfine Interaction	31
	Exercises	31
2	DC Stark Effect	35
2.1	Electric Field Perturbations	35
2.2	Electric Dipole Moment	37
2.3	Linear and Quadratic Stark Shifts	40

- 2.4 Stark Shifts of Rotational Levels 42
 - 2.4.1 Molecules in a $^1\Sigma$ Electronic State 42
 - 2.4.2 Molecules in a $^2\Sigma$ Electronic State 46
 - 2.4.3 Molecules in a $^3\Sigma$ Electronic State 48
 - 2.4.4 Molecules in a $^1\Pi$ Electronic State – Λ -Doubling 51
 - 2.4.5 Molecules in a $^2\Pi$ Electronic State 54
 - Exercises 56

- 3 Zeeman Effect 59
 - 3.1 The Electron Spin 59
 - 3.1.1 The Dirac Equation 60
 - 3.2 Zeeman Energy of a Moving Electron 63
 - 3.3 Magnetic Dipole Moment 64
 - 3.4 Zeeman Operator in the Molecule-Fixed Frame 66
 - 3.5 Zeeman Shifts of Rotational Levels 67
 - 3.5.1 Molecules in a $^2\Sigma$ State 67
 - 3.5.2 Molecules in a $^2\Pi$ Electronic State 71
 - 3.5.3 Isolated Σ States 74
 - 3.6 Nuclear Zeeman Effect 75
 - 3.6.1 Zeeman Effect in a $^1\Sigma$ Molecule 76
 - Exercises 78

- 4 AC Stark Effect 81
 - 4.1 Periodic Hamiltonians 82
 - 4.2 The Floquet Theory 84
 - 4.2.1 Floquet Matrix 88
 - 4.2.2 Time Evolution Operator 89
 - 4.2.3 Brief Summary of Floquet Theory Results 90
 - 4.3 Two-Mode Floquet Theory 92
 - 4.4 Rotating Wave Approximation 94
 - 4.5 Dynamic Dipole Polarizability 96
 - 4.5.1 Polarizability Tensor 97
 - 4.5.2 Dipole Polarizability of a Diatomic Molecule 99
 - 4.5.3 Rotational vs Vibrational vs Electronic Polarizability 101
 - 4.6 Molecules in an Off-Resonant Laser Field 104
 - 4.7 Molecules in a Microwave Field 107
 - 4.8 Molecules in a Quantized Field 109
 - 4.8.1 Field Quantization 109
 - 4.8.2 Interaction of Molecules with Quantized Field 116
 - 4.8.3 Quantized Field vs Floquet Theory 117
 - Exercises 118

5	Molecular Rotations Under Control	121
5.1	Orientation and Alignment	122
5.1.1	Orienting Molecular Axis in Laboratory Frame	123
5.1.2	Quantum Pendulum	126
5.1.3	Pendular States of Molecules	129
5.1.4	Alignment of Molecules by Intense Laser Fields	131
5.2	Molecular Centrifuge	136
5.3	Orienting Molecules Matters – Which Side Chemistry	140
5.4	Conclusion	142
	Exercises	142
6	External Field Traps	145
6.1	Deflection and Focusing of Molecular Beams	146
6.2	Electric (and Magnetic) Slowing of Molecular Beams	151
6.3	Earnshaw's Theorem	155
6.4	Electric Traps	158
6.5	Magnetic Traps	162
6.6	Optical Dipole Trap	165
6.7	Microwave Trap	167
6.8	Optical Lattices	168
6.9	Some Applications of External Field Traps	171
	Exercises	173
7	Molecules in Superimposed Fields	175
7.1	Effects of Combined DC Electric and Magnetic Fields	175
7.1.1	Linear Stark Effect at Low Fields	175
7.1.2	Imaging of Radio-Frequency Fields	178
7.2	Effects of Combined DC and AC Electric Fields	181
7.2.1	Enhancement of Orientation by Laser Fields	181
7.2.2	Tug of War Between DC and Microwave Fields	182
8	Molecular Collisions in External Fields	187
8.1	Coupled-Channel Theory of Molecular Collisions	188
8.1.1	A Very General Formulation	188
8.1.2	Boundary Conditions	191
8.1.3	Scattering Amplitude	194
8.1.4	Scattering Cross Section	197
8.1.5	Scattering of Identical Molecules	200
8.1.6	Numerical Integration of Coupled-Channel Equations	204
8.2	Interactions with External Fields	208
8.2.1	Coupled-Channel Equations in Arbitrary Basis	208

- 8.2.2 External Field Couplings 209
- 8.3 The Arthurs–Dalgarno Representation 211
- 8.4 Scattering Rates 214

- 9 Matrix Elements of Collision Hamiltonians 217**
 - 9.1 Wigner–Eckart Theorem 218
 - 9.2 Spherical Tensor Contraction 220
 - 9.3 Collisions in a Magnetic Field 221
 - 9.3.1 Collisions of 1S -Atoms with $^2\Sigma$ -Molecules 221
 - 9.3.2 Collisions of 1S -Atoms with $^3\Sigma$ -Molecules 225
 - 9.4 Collisions in an Electric Field 229
 - 9.4.1 Collisions of $^2\Pi$ Molecules with 1S Atoms 229
 - 9.5 Atom–Molecule Collisions in a Microwave Field 232
 - 9.6 Total Angular Momentum Representation for Collisions in Fields 234

- 10 Field-Induced Scattering Resonances 239**
 - 10.1 Feshbach vs Shape Resonances 239
 - 10.2 The Green’s Operator in Scattering Theory 242
 - 10.3 Feshbach Projection Operators 243
 - 10.4 Resonant Scattering 246
 - 10.5 Calculation of Resonance Locations and Widths 249
 - 10.5.1 Single Open Channel 249
 - 10.5.2 Multiple Open Channels 249
 - 10.6 Locating Field-Induced Resonances 252

- 11 Field Control of Molecular Collisions 257**
 - 11.1 Why to Control Molecular Collisions 257
 - 11.2 Molecular Collisions are Difficult to Control 259
 - 11.3 General Mechanisms for External Field Control 261
 - 11.4 Resonant Scattering 261
 - 11.5 Zeeman and Stark Relaxation at Zero Collision Energy 264
 - 11.6 Effect of Parity Breaking in Combined Fields 269
 - 11.7 Differential Scattering in Electromagnetic Fields 271
 - 11.8 Collisions in Restricted Geometries 272
 - 11.8.1 Threshold Scattering of Molecules in Two Dimensions 276
 - 11.8.2 Collisions in a Quasi-Two-Dimensional Geometry 280

- 12 Ultracold Controlled Chemistry 283**
 - 12.1 Can Chemistry Happen at Zero Kelvin? 284
 - 12.2 Ultracold Stereodynamics 287
 - 12.3 Molecular Beams Under Control 289
 - 12.4 Reactions in Magnetic Traps 289

12.5	Ultracold Chemistry – The Why and What’s Next?	291
12.5.1	Practical Importance of Ultracold Chemistry?	291
12.5.2	Fundamental Importance of Ultracold Controlled Chemistry	293
12.5.3	A Brief Outlook	294
A	Unit Conversion Factors	297
B	Addition of Angular Momenta	299
B.1	The Clebsch–Gordan Coefficients	301
B.2	The Wigner $3j$ -Symbols	303
B.3	The Raising and Lowering Operators	304
C	Direction Cosine Matrix	307
D	Wigner D-Functions	309
D.1	Matrix Elements Involving D -Functions	311
E	Spherical Tensors	315
E.1	Scalar and Vector Products of Vectors in Spherical Basis	317
E.2	Scalar and Tensor Products of Spherical Tensors	318
	References	321
	Index	347
