List of Contributors

Preface

A

Aerogel

1	Studies On Biocompatible Surface-Active Silica Aerogel and Polyurethane-Siloxane Cross-Linked Structures for Various Surfaces		
	K. Seeni Meera, R. Murali Sankar, S. N. Jaisankar, and Asit Baran Mandal		

- 1.1 Introduction, 1
 - 1.1.1 Silica Aerogel, 1
 - 1.1.2 Ionic Liquids, 2
 - 1.1.3 Polyurethane–Siloxane Cross-Linked Structures, 2
- 1.2 Experimental Section, 3
 - 1.2.1 Preparation of Silica Aerogel Using Choline Formate, 3
 - 1.2.2 Preparation of Polyurethane–Siloxane Cross-Linked Films, 3
 - 1.2.3 Characterization, 4
- 1.3 Results and Discussion, 5
 - 1.3.1 Results of Surface-Active Silica Aerogel, 5
 - 1.3.2 Results of Polyurethane–Siloxane Cross-Linked Structures, 8
- 1.4 Conclusions, 12

Acknowledgment, 14 References, 14

Anesthetics

2 Interaction of Anesthetics with Globular Proteins

Makoto Nishimoto, Michio Yamanaka, and Hitoshi Matsuki

- 2.1 Introduction, 17
- 2.2 Anesthetic Effect on FFL, 18
- 2.3 Anesthetic Effect on Mgb, Lys, and BSA, 22
- 2.4 Intrinsic Interaction Mode of an Anesthetic with Proteins, 29

1

xxiii

xxix

2.5 Conclusions, 32 Acknowledgments, 33 References, 33

3 Lipid Monolayer and Interaction with Anesthetics

Yasushi Yamamoto and Keijiro Taga

- 3.1 Introduction, 36
- 3.2 Monolayer Formation, 36
 - 3.2.1 Dipalmitoyl Phosphatidyl Choline (DPPC), 37
 - 3.2.2 Dimyristoyl Phosphatidyl Choline (DMPC), 39
 - 3.2.3 Cholesterol, 40
 - 3.2.4 DPPC and Cholesterol Mixture, 41
 - 3.2.5 Usefulness of Dropping Method, 44
- 3.3 Interaction between Lipid Monolayer and Anesthetics, 44
 - 3.3.1 Quartz Crystal Oscillator (QCO) Method, 45
 - 3.3.2 Apparatuses and Procedure, 46
 - 3.3.3 Time Course of Frequency (QCM) and Resistance (QCI), 48
 - 3.3.4 Concentration Dependence of Frequency (QCM) and Resistance (QCI), 49
 - 3.3.5 True Anesthesia Phenomenon, 56
 - Acknowledgment, 56

References, 57

Atomic Force Microscopy

4 Atomic Force Microscopy for Measuring Interaction Forces in Biological Materials and Cells

Naoyuki Ishida, Yasuyuki Kusaka, Tomonori Fukasawa, and Hiroyuki Shinto

- 4.1 Introduction, 59
- 4.2 Measurement of Interaction Forces Using AFM, 60
- 4.3 Interaction of Model Membranes, 61
- 4.4 Interaction of Proteins, 62
- 4.5 Interaction of Cells, 63
- 4.6 Concluding Remarks, 65 References, 65

B

Bacterial Interaction

5 Bacterial Interactions

Masanori Toyofuku, Yosuke Tashiro, Tomohiro Inaba, and Nobuhiko Nomura

- 5.1 Introduction, 68
- 5.2 Gram-Positive and Gram-Negative Bacteria, 68
- 5.3 Cell-Cell Communication in Bacteria, 69
 - 5.3.1 Cell–Cell Communication in Gram-Negative Bacteria, 69
 - 5.3.2 Cell–Cell Communication in Gram-Positive Bacteria, 71
 - 5.3.3 A Common Language for Gram-Negative and Gram-Positive Bacteria: AI-2, 71
- 5.4 Membrane Vesicles, 72
 - 5.4.1 Components of MVs, 72
 - 5.4.2 Biological Roles of MVs, 73

68

59

- 5.4.3 Surface Characteristics of MVs, 73
- 5.4.4 Future Perspectives in MV Research, 74
- 5.5 Biofilm Formation, 745.5.1 Surface-Attached Biofilms, 75
 - 5.5.2 Bacterial Aggregates, 76
- 5.6 Concluding Remarks, 77 References, 77

Biocompatible Polymer

6 2D and 3D Biocompatible Polymers for Biomedical Devices Masaru Tanaka

- 6.1 Introduction, 82
- 6.2 Biocompatible Polymeric Biomaterials, 82
- 6.3 Protein Adsorption on Polymeric Biomaterials, 83
- 6.4 Water Structure of Polymers, 84
- 6.5 3D Polymer Surfaces for Tissue Engineering, 85
- 6.6 Methods of 3D Polymer Fabrication, 866.6.1 Top-Down Fabrication, 86
 - 6.6.2 Bottom-Up Fabrication, 86
- 6.7 Control of Cell Adhesion and Functions, 88
- 6.8 Conclusions and Perspectives, 90 Acknowledgments, 91 References, 91

Biofilm

7 Biofilm

Hisao Morisaki

- 7.1 Introduction, 94
- 7.2 Formation Process of Biofilm, 94
- 7.3 Biofilm Constituents, 95
 - 7.3.1 Substratum Surface, 95
 - 7.3.2 Biofilm Microbes, 96
 - 7.3.3 Extracellular Polymeric Substances (EPSs), 97
 - 7.3.4 Interstitial Water among EPSs, 98
- 7.4 Biofilm and Surrounding Environment, 99
 - 7.4.1 Influence of Surrounding Environment on Biofilm, 99
 - 7.4.2 Influence of Biofilm on Surrounding Environment, 99
- 7.5 Present and Prospective Biofilm Research, 100 References, 101

Bioflotation

8 Use of Microorganisms for Complex ORE Beneficiation: Bioflotation as an Example

Akira Otsuki

- 8.1 Introduction, 108
- 8.2 Characterization of Complex Ores, 108
 - 8.2.1 Mineral Analysis in Dry State, 108
 - 8.2.2 Mineral/Particle Analysis in Water, 109
 - 8.2.3 Mixture of Complementary Analyses, 111

108

94

- 8.2.4 Refractory Gold Ore Beneficiation, 111
- 8.2.5 Sulfide Flotation Using a Microorganism as a Flotation Reagent, 111
- 8.3 Summary, 116
 - References, 116

Biofouling

9 Biofouling

Kazuho Nakamura

- 9.1 Definition of Biofouling, 118
- 9.2 Formation of Biofilms, 118
- 9.3 Biofouling in Industries, 118
 - 9.3.1 Biofouling in Heat Exchangers, 119
 - 9.3.2 Biofouling of Medical Devices, 119
 - 9.3.3 Biofilms in Wastewater Treatment Processes, 120
 - 9.3.4 Biofouling in Membrane Processes, 121

References, 121

Bio-inspired Microemulsion

10 Bioinspired Microemulsions and Their Strategic Pharmacological Perspectives

Soumik Bardhan, Kaushik Kundu, Gulmi Chakraborty, Bidyut K. Paul, Satya P. Moulik, and Swapan K. Saha

- 10.1 Introduction, 122
- 10.2 A Brief Outline of Microemulsion Systems, 123
 - 10.2.1 Types of Microemulsion Systems, 124
 - 10.2.2 Role of Surfactant in Formation of Microemulsions, 124
 - 10.2.3 Role of Cosurfactant in Formation of Microemulsions, 124
 - 10.2.4 Role of Oil in Formation of Microemulsions, 125
 - 10.2.5 Solubilization in Microemulsions, 125
 - 10.2.6 Characterization of Microemulsions, 125
 - 10.2.7 Stability of Microemulsions, 125
- 10.3 Design Strategy for Bioinspired Microemulsion Systems, 126
 - 10.3.1 Selection of Ingredients, 126
 - 10.3.2 Types of Bioinspired Microemulsions, 127
 - 10.3.3 Decisive Factors for Pharmaceutical Applications, 129
- 10.4 Recent Advances in Bioinspired Microemulsions in Pharmaceutical Science, 129
 - 10.4.1 Microemulsions as in Vitro Drug Delivery Systems, 129
 - 10.4.2 Microemulsions as in Vivo Drug Delivery Systems, 131
 - 10.4.3 Microemulsions in Cancer Therapy, 132
 - 10.4.4 Microemulsions in Biotechnology, 133
 - 10.4.5 Antimicrobial Activity of Microemulsions, 134
 - 10.4.6 Biocompatible Ionic Liquid Microemulsions in Drug Delivery and Biotechnology, 135

10.4.7 Patents in Microemulsion Drug Delivery Systems, 136

- 10.5 Biocompatibility and Toxicity Issues, 137
- 10.6 Future Outlook, 138
 - Acknowledgment, 138 References, 138

Biomaterial

11 Development of Nonfouling Biomaterials

Ruey-Yug Tsay and Toyoko Imae

- 11.1 Introduction, 145
- 11.2 Why Nonfouling is Relevant in Biomaterials, 145
 - 11.2.1 Antithrombogenesis and Anti-inflammatory Response, 145
 - 11.2.2 Host Response to Biomaterials, 146
 - 11.2.3 Antibacterial Property, 147
- 11.3 Protein Adsorption and Material Properties, 148
 - 11.3.1 Adsorption Mechanism of Protein, 148
 - 11.3.2 Protein-Surface Interactions, 148
 - 11.3.3 Surface Hydration, 149
 - 11.3.4 Strategies for Nonfouling Design, 149
- 11.4 Nonfouling Biomaterials, 150
 - 11.4.1 Surface Immobilization Techniques, 151
 - 11.4.2 Nonionic Hydrophilic Materials, 153
 - 11.4.3 Zwitterionic Materials, 154
 - 11.4.4 Amphiphilic Materials, 156
- 11.5 Conclusions and Future Perspectives, 157 References, 157

12 Surface Characterization of Silver and Fe₃O₄ Nanoparticles Incorporated into Collagen-based Scaffolds as Biomaterials for Tissue Regeneration: State-of-the-Art and Future Perspectives

Abhishek Mandal, N. Chandrasekaran, Amitava Mukherjee, and Thothapalli P. Sastry

- 12.1 Introduction, 161
- 12.2 Structural Information, 163
 - 12.2.1 SDS-PAGE Analysis, 163
 - 12.2.2 Circular Dichroism (CD) Studies, 164
 - 12.2.3 Differential Scanning Calorimetry (DSC), 165
 - 12.2.4 X-Ray Diffraction (XRD), 166
- 12.3 Chemical Information, 167
 - 12.3.1 Fourier Transform Infrared (FT-IR) Spectroscopy, 167
 - 12.3.2 X-Ray Photoelectron Spectroscopy (XPS), 168
- 12.4 Morphological Information, 171
 - 12.4.1 Scanning Electron Microscopy (SEM), 171
 - 12.4.2 Atomic Force Microscopy (AFM), 173
- 12.5 Conclusions and Future Perspectives, 175 Acknowledgment, 175 References, 175

Biomimetics

13 Biomimetic Polymer Aggregates: Self-Assembly Induced by Chemical Reactions Eri Yoshida

181

161

13.1 Introduction, 181

- 13.2 Self-Assembly Induced by Electron Transfer, 181
 - 13.2.1 Oxidation-Induced Self-Assembly, 182
 - 13.2.2 Reduction-Induced Self-Assembly, 184
 - 13.2.3 Disproportionation-Induced Self-Assembly, 184

- 13.3 Self-Assembly Induced by Irreversible Photoreactions, 186
 - 13.3.1 Photolysis-Induced Self-Assembly, 188
 - 13.3.2 Photo-Claisen Rearrangement-Induced Self-Assembly, 189
 - 13.3.3 Photoelectron Transfer-Induced Self-Assembly, 190
- 13.4 Conclusions, 191 References, 191

14 Molecular Interaction in Biomimetics and Biosystems: Chirality and Confinement at Nanodimension

Nilashis Nandi and Saheb Dutta

- 14.1 Introduction, 195
- 14.2 Methods of Theoretical Calculation, 198
- 14.3 Chiral Discrimination in Biomimetic Monolayers, 198
- 14.4 Experimental Studies on Chiral Discrimination in Peptide Synthesis and Aminoacylation Reaction, 199
- 14.5 Computational Analysis of Chiral Discrimination in Aminoacylation Reaction, 202
- 14.6 Computational Studies of the Chiral Discrimination in Peptide Bond Formation Reaction, 204
- 14.7 Concluding Remarks, 206 Acknowledgments, 207 References, 207

Biosensing

15 Softinterface on Biosensing

Yukichi Horiguchi and Yukio Nagasaki

- 15.1 Introduction, 211
- 15.2 Advantages of Suppressing the Nonspecific Adsorption on a Surface by PEGylation, 212
- 15.3 Peg Chain Behavior on Surfaces, 212
- 15.4 Functionalization of PEG End for PEGylation on Surface, 214
- 15.5 Hybrid Immobilization of PEG with Ligand Molecules, 215
- 15.6 Conclusion, 217 References, 217

Bioseparation

16 Bioseparation Using Thermoresponsive Polymers

Kenichi Nagase and Teruo Okano

- 16.1 Introduction, 220
- 16.2 Thermoresponsive Chromatography with Hydrophobic Interactions, 220
- 16.3 Thermoresponsive Chromatography with Electrostatic Interactions, 222
- 16.4 Thermoresponsive Chromatography Using Volume Exclusion Effect of PIPAAm, 224
- 16.5 Thermoresponsive Chromatography for High-Speed Separation, 226
- 16.6 Thermally Modulated Cell Separation Using PIPAAm, 227
- 16.7 Conclusions, 228 Acknowledgment, 229 References, 229

195

211

Biosurfactant

17 Biosurfactants

Etsuo Kokufuta

- 17.1 Introduction, 231
- 17.2 Classification, 231
- 17.3 Chemical and Physical Properties, 239

18 Structure and Regulation of the Blood-Brain Barrier

17.4 Applications, 242 References, 243

Blood-brain Barrier

Yung-Chih Kuo, Chin-Lung Lee, and Jyh-Ping Hsu 18.1 Introduction, 244 18.2 Cellular System of the BBB, 244 18.2.1 Tight Junctions, 244 18.2.2 Neurovascular Unit, 245 18.2.3 BMECs, 245 18.2.4 Astrocytes, 245 18.2.5 Pericytes, 246 18.3 In Vitro BBB Model, 246 18.3.1 Primary Culture, 247 18.3.2 Coculture, 247 18.4 ABC Transporters in the BBB, 247 18.4.1 Mechanism of ABC Transporters, 247 18.5 Secreted Factors for BBB Regulation: Mechanism and Inhibitor, 247 18.5.1 TGFβ1, 248

- 18.5.2 VEGF, 248
- 18.5.3 MMP-9, 248
- 18.6 Nanoparticles for Delivering Pharmaceuticals Across the BBB, 248 Acknowledgments, 250 Abbreviations, 250 References, 250

Boron Tracedrug

19 Boron Tracedrugs as Theranostic Agents for Neutron Dynamic Therapy255

Hitoshi Hori and Hiroshi Terada

- 19.1 The Real Crisis for Twenty-First-Century Medicinal Chemists in Pharmaceutical Industries and Academia, 255
- 19.2 Boron Tracedrugs as a Challenge to Traditional Drug Design Methodology, 255
- 19.3 Boron Tracedrugs for Neutron Dynamic Therapy (NDT), as Physician-Friendly Tools, 257
- 19.4 Conclusions, 258 Acknowledgment, 259 References, 259

231

С

Carbohydrate

20 Carbohydrates as Biocolloids in Nanoscience

Zaheer Khan, Shokit Hussain, Ommer Bashir, and Shaeel Ahmed Al-Thabaiti

- 20.1 Introduction, 260
- 20.2 Types of Biocolloids, 261
- 20.3 Properties, 262
- 20.4 Carbohydrates in Nanoscience, 262 References, 265

Cartilage

21 High-Strength Poly(Vinyl Alcohol) Hydrogels for Artificial Cartilage

Atsushi Suzuki and Teruo Murakami

- 21.1 Introduction, 269
- 21.2 Fundamental Properties of Physical PVA Gels, 270
 21.2.1 Network Structure: Swelling Ratio and Crystallinity, 270
 21.2.2 Conditions for Starting Raw Materials, 271
- 21.3 Typical Examples of Physical PVA gels: Preparations and Mechanical Properties, 272
 - 21.3.1 Swelling Ratio and Compression Stress, 273
 - 21.3.2 Tearing Energy by a Trouser Tear Test, 274
 - 21.3.3 Dynamic Friction Coefficient and Wear Ratio, 274
- 21.4 Mechanical Strengthening and Future Visions, 276 Acknowledgment, 277 References, 277

22 Superior Tribological Behaviors of Articular Cartilage and Artificial Hydrogel Cartilage

Teruo Murakami and Atsushi Suzuki

- 22.1 Introduction, 278
- 22.2 Various Lubrication Modes in Natural Synovial Joints, 278
- 22.3 Biphasic Lubrication in Natural Synovial Joints, 280
- 22.4 Boundary Lubrication in Natural Synovial Joints, 282
- 22.5 Lubrication Modes in Artificial Joints, 284
- 22.6 Frictional Behaviors of Artificial Hydrogel Cartilage, 285
 22.6.1 Artificial Cartilage, 285
 22.6.2 Articular Cartilage, 286
- 22.7 Biphasic Finite-Element Analyses for Artificial Hydrogel Cartilage, 286
- 22.8 Boundary Lubrication in Freeze-Thawing PVA Hydrogel, 287
- 22.9 Superior Tribological Behavior of Artificial Hydrogel Cartilage, 288
- 22.10 Conclusion, 289 Acknowledgment, 289 References, 289

Cell Mimicking Vesicle

23 Self-Assembled Cell-Mimicking Vesicles Composed of Amphiphilic Molecules: Structure and Applications

Swati De and Ranju Prasad Mandal

23.1 Introduction, 292

260

269

278

- 23.2 Principles of Vesicle Formation, 292 23.2.1 Parameters, 292
- 23.3 Classical Vesicles, 295
 - 23.3.1 Classification, 295
 - 23.3.2 Dynamic Processes Occurring in Vesicles, 295
 - 23.3.3 Formation of Vesicles, 296
- 23.4 Novel Vesicular Systems-Going Beyond Lipids, 300
 - 23.4.1 Niosomes, 301
 - 23.4.2 Ethosomes, 301
 - 23.4.3 Transferosomes, 301
 - 23.4.4 Sphingosomes, 301
 - 23.4.5 Pharmacosomes, 302
 - 23.4.6 e-Liposomes, 302
 - 23.4.7 Polymerosomes, 302
 - 23.4.8 Catansomes, 302
- 23.5 Vesicle Characterization Techniques, 303
 - 23.5.1 Morphology, 303
 - 23.5.2 Size Distribution, 303
 - 23.5.3 Membrane Thickness, Lamellarity, and Fluidity, 303
 - 23.5.4 Zeta-Potential and Surface Properties, 304
 - 23.5.5 Stability, 304
 - 23.5.6 Entrapment Efficiency, 304
 - 23.5.7 In Vitro Release Study, 304
 - 23.5.8 pH Sensitivity Assessment, 304
- 23.6 Applications of Vesicles, 304
 - 23.6.1 Drug Delivery, 304
 - 23.6.2 Cosmetic Applications, 305
 - 23.6.3 As Self-Assembled Nanoreactors, 305
 - 23.6.4 As Organized Assemblies for Fluorescence-Based Studies, 306
- 23.7 Future Perspectives and Directions of Research on Vesicles, 307 Acknowledgments, 307 References, 308

Cell Regulation

24 Integrin-Dependent Cell Regulation and its Clinical Application

313

Takuya Iyoda, Takuya Matsunaga, and Fumio Fukai

- 24.1 Introduction, 313
- 24.2 Inactivation of β 1-Integrin by FNIII14 Increases Chemosensitivity of Acute Myelogenous Leukemia (AML) Cells, 314
- 24.3 Forced Adhesion to Fibronectin Through Sustained Activation of β1-Integrin by TNIIIA2 Caused Apoptosis in Hematopoietic Tumor Cells, 317
- 24.4 TNIIIA2-Induced Activation of β 1-Integrin Enhances Intracellular Drug Accumulation in Hematopoietic Tumor Cells, 318
- 24.5 TNIIIA2-Mediated β 1-Integrin Activation Accelerates Erythroid Differentiation of Hematopoetic Tumor Cells, 320
- 24.6 TNIIIA2-Mediated β1-Integrin Activation Leads Deregulated Hyperproliferation to Nontransformed Fibroblastic Cells, 320
- 24.7 Concluding Remarks, 321 References, 323

Chitosan

25 Depth Profile of Kr⁺-Irradiated Chitosan Kazunaka Endo

- 25.1 Introduction, 325
- 25.2 Computational Method, 325
- 25.3 Experimental Method, 326
- 25.4 Results and Discussion, 326
 25.4.1 Raman Shift Spectral Analysis, 327
 25.4.2 Valence Band X-Ray Photoelectron Spectral Analysis, 328
 25.5 Conclusion, 329
 - References, 330

26 Electronic Structure of Chitosan

Kazunaka Endo

- 26.1 Introduction, 331
- 26.2 Experimental Method, 331
- 26.3 Theoretical Background, 33226.3.1 NMR Chemical Shielding Tensor, 33226.3.2 XPS, 332
- 26.4 Calculations, 332
 26.4.1 NMR Chemical Shielding Tensor, 332
 26.4.2 XPS, 333
 26.5 Basylia and Dispussion 233
- 26.5 Results and Discussion, 333
 26.5.1 ¹³C-NMR Chemical Shielding Tensor, 333
 26.5.2 XPS, 336
- 26.6 Conclusion, 337 References, 338

Collagen Matrix

27 Aligned Fibrillar Collagen Matrices

Ralf Zimmermann, Jens Friedrichs, Babette Lanfer, Uwe Freudenberg, and Carsten Werner

- 27.1 Introduction, 340
- 27.2 Shear Flow Deposition of Collagen Matrices, 341
 - 27.2.1 Fibers in Shear Flow, 341
 - 27.2.2 Experimental Approach, 341
 - 27.2.3 Possible Mechanism of Fibril Alignment, 347
 - 27.2.4 Comparison with Other Methods, 347
- 27.3 Collagen Self-Alignment on Mica, 347
 - 27.3.1 Directing Collagen Self-Assembly into Ultrathin Matrices, 347
 - 27.3.2 Adjusting the Collagen Matrix Density by pH Change, 348
 - 27.3.3 Role of Electrolytes in Determining Final Collagen Matrices, 349
 - 27.3.4 Structural Features of Self-Assembled Collagen Fibrils Resembling in Vivo Fibrils, 349
 - 27.3.5 Reshaping Collagen Matrices on Nanoscale, 349
 - 27.3.6 Collagen Matrices Showing Enhanced Stability after Maturation, 350
 - 27.3.7 Insight into Collagen Self-Assembly through Time-Lapse AFM, 350
- 27.4 Summary, 352

Acknowledgment, 352 References, 352

331

Colloidal Crystallization

28 Colloidal Crystallization

Tsuneo Okubo

- 28.1 Introduction, 355
- 28.2 Preparation and Characterization of Biological and Synthetic Colloidal Particles, 356
 - 28.2.1 Biological Colloidal Particles, 356
 - 28.2.2 Polymer Colloidal Particles, 356
 - 28.2.3 Inorganic Colloidal Particles, 357
 - 28.2.4 Basic Characteristics of Colloidal Particles, 358
- 28.3 Why Crystal Structures Form, 358
- 28.4 Morphology and Phase Diagram of Colloidal Single Crystals, 359
- 28.5 Lattice Structure of Colloidal Crystals, 360
- 28.6 Alloy Crystals of Colloidal Mixtures, 361
- 28.7 Colloidal Crystallization Kinetics, 361
- 28.8 Static and Dynamic Light Scattering and Small-Angle Neutron Scattering, 362
- 28.9 Structural Relaxation Times of Colloidal Crystals, 363
- 28.10 Rigidity of Colloidal Crystals, 364
- 28.11 Viscosity and Viscoelasticity of Colloidal Crystals, 365
- 28.12 External Field Effects on Colloidal Crystals, 365
- 28.13 Colloidal Crystallization in Microgravity, 367
- 28.14 Two-Dimensional Colloidal Crystals, 367
- 28.15 Biological Colloidal Crystals, 368
- 28.16 New Colloidal Crystal Systems, 368
- 28.17 Miscellaneous, 369
- 28.18 Application of Colloidal Crystals, 369
- 28.19 Concluding Remarks, 370 References, 370

D

Dielectric Property

29 Dielectric Properties of Biological Macromolecules and Biomolecule–Water Interfaces

380

- Brandon Campbell, Lin Li, and Emil Alexov
- 29.1 Background, 380
- 29.2 Macromolecular Dynamics and Its Effect on the Macromolecular Interior and Molecular Surface, 381
 - 29.2.1 Thermal Fluctuations of Atoms, Amino or Nucleic Acids, or Entire Domains, 381
 - 29.2.2 Conformational Changes Induced by Macromolecular Function, 381
 - 29.2.3 Intrinsically Disordered Macromolecules, 382
 - 29.2.4 Conformational Changes Caused by a Change in Environment Due to pH or Salt Concentration, 383
- 29.3 Water Molecule Dynamics and Its Effect on Protein Interior and Molecular Surface, 383
- 29.4 Modeling Macromolecular Interior and Macromolecule–Water Interfaces, 384
- 29.5 Role of Ions, 384

xvi CONTENTS

- 29.6 Dielectric Properties of Biological Macromolecules and Biomolecule–Water Interfaces, 384
- 29.7 Concluding Remarks, 386 Acknowledgments, 386 References, 386

Drug Delivery

30 NMR of Drug Delivery Coupled with Lipid Membrane Dynamics Emiko Okamura

- 30.1 Introduction, 391
- 30.2 Dynamics of Membranes as a Platform of Vital Functions, 391 30.2.1 Diffusion, 392
 - 30.2.2 Protrusion, 394
- 30.3 Drug Delivery Related to Membrane Dynamics, 394
 - 30.3.1 Diffusion of Drugs in the Membrane, 395
 - 30.3.2 Kinetics of Membrane Binding and Dissociation, 396
 - 30.3.3 Thermodynamic Stability, 399
 - 30.3.4 Dynamic Binding Probability, 399
 - 30.3.5 Effect of Cholesterol, 400
- 30.4 Concluding Remarks and Future Perspectives, 400 Acknowledgments, 401 References, 401

31 Stimulus-Responsive Intelligent Drug Delivery System Based on Hydroxyapatite-Related Materials

Makoto Otsuka

- 31.1 Introduction, 403
- 31.2 Slow Drug Release from Self-Setting Apatite Cements, 403
- 31.3 Effect of Calcium Level on in Vitro Drug Release from Apatite Cement, 404
- 31.4 Calcium-Level-Responsive Drug Release of Apatite Cements Containing Antiosteoporosis Drug in Healthy and Diseased Rats and Therapeutic Effects, 404
- 31.5 Drug Delivery System Containing VK2 Based on Self-Setting Apatite/Collagen Composite Cements (AC), 406
- 31.6 Biodegradation of the AC Block with Interconnecting Pores as a Skeletal Bone Cell Scaffold, 407
- 31.7 Drug Release from Biodegradable Apatite/Collagen Composite Cements with Interconnective Macropores, 408
- 31.8 In Vitro Bone Cell Activity–Responsive Drug Release from Biodegradable Apatite/Collagen Bone Cell Scaffold with Interconnective Macropores, 408
- 31.9 In Vivo Bone Cell Activity–Responsive Deoxyribonucleic Acid (DNA) Release from Injectable Self-Setting Apatite Cement and Application to Gene Therapy, 409 Acknowledgments, 411 References, 411

Drying Structure

32 Drying Structure

Tsuneo Okubo

32.1 Introduction, 412

403

391

- 32.2 Convectional Patterns, 413
- 32.3 Sedimentation Patterns, 416
- 32.4 Drying Patterns of Colloidal Dispersions and Colloidal Crystals, 417
- 32.5 Drying Patterns of Polymer Gel Spheres, 419
- 32.6 Drying Patterns of Synthetic and Biological Polymers, 421
- 32.7 Drying Patterns of Ionic and Neutral Surfactants, 423
- 32.8 Drying Patterns of Simple Electrolytes, 424
- 32.9 Drying Patterns of Other Solutes, 424
- 32.10 Transferring Information on Solutions and Suspensions Toward the Drying Patterns, 424
- 32.11 Miscellaneous, 426
- 32.12 Concluding Remarks, 426 References, 427

Е

Electrophoretic Mobility

33 Electrophoretic Mobility of Colloidal Particles

Hiroyuki Ohshima

- 33.1 Introduction, 430
- 33.2 Smoluchowski's, Hückel's, and Henry's Equations, 430
- 33.3 General Theory of the Electrophoretic Mobility of Spherical Hard Particles, 431
- 33.4 Relaxation Effect, 433
- 33.5 Electrophoretic Mobility of Soft Particles, 435 References, 437

Electrostatic Interaction

34 Electrostatic Interaction Between Colloidal Particles

Hiroyuki Ohshima

- 34.1 Introduction, 439
- 34.2 Interaction Between Hard Particles, 439
 - 34.2.1 Interaction between Two Parallel Plates: Low-Potential Case, 439
 - 34.2.2 Derjaguin's Approximation for Calculation of Interactions between Two Spheres or Cylinders, 440
 - 34.2.3 Low-Potential Case, 440
 - 34.2.4 Linear Superposition Approximation: Arbitrary Potential Case, 441
- 34.3 Interaction Between Soft Particles, 443
- 34.4 Interaction Between Two Soft Particles After Contact, 44434.4.1 Two-Stage Model, 444
 - 34.4.2 Three-Stage Model, 446
- 34.5 Electrostatic Interaction Between Two Interpenetrating Soft Particles, 448 34.5.1 Linearized Poisson–Boltzmann Equations for Two Interacting
 - Charged Porous Spheres, 448

References, 449

Emulsion

35 Physicochemical Properties and Clinical Applications Of Surfactant-Free Emulsions Prepared with Electrolytic Reduction Ion Water (ERI) Ken-ichi Shimokawa and Fumiyoshi Ishii

ten-tem Shimokawa ana 1 amiyoshi 1

35.1 Introduction, 451

430

439

- 35.2 Preparation and Physicochemical Properties of Surfactant-Free Emulsions Prepared with ERI Containing Magnesium Aluminum Silicate, 453
- 35.3 Effects of Electrolytic Reduction Ion Water (ERI) Lotion Prepared with Surfactant-Free Emulsions on Burn Wound Healing (Case Report), 456 References, 457

Enzyme Membrane

36 Steady-State Coupling in Enzyme Membrane

Kazuo Nomura

- 36.1 Introduction, 459
- 36.2 Theoretical Background, 459
- 36.3 Results and Discussion, 462
 - 36.3.1 Membrane Permeation across the Ionomer Membrane, 462
 - 36.3.2 Immobilization of Enzyme, 463
 - 36.3.3 Hydrolysis of 4-Nitrophenylphosphate across Immobilized Enzyme Membrane, 463
 - 36.3.4 Degree of Coupling between Reaction Rate and Diffusional Flux in the Enzyme Membrane System, 464
 - 36.3.5 Quantity of Immobilized Acid Phosphatase, 466 References, 468

Exosome

37 Evaluation of Zeta-Potential of Individual Exosomes Secreted from Biological Cells Using a Microcapillary Electrophoresis Chip

Takanori Akagi and Takanori Ichiki

- 37.1 Introduction, 469
- 37.2 Exosome Preparation, 469
- 37.3 Electrophoresis System for Exosomes, 470
- 37.4 Relation Between Zeta-Potentials of Exosomes and Their Originating Cells, 470
- 37.5 Effect of Sialidase on the Zeta-Potential of Exosomes, 472
- 37.6 Conclusion, 473
 - References, 473

F

Flocculation Dynamics

38 Flocculation Dynamics on the Basis of Collision-Limited Analysis

Yasuhisa Adachi

- 38.1 Introduction, 474
- 38.2 Population Balance Equation, 474
- 38.3 Brownian Coagulation, 475
 - 38.3.1 Collision Process under Brownian Motion, 475
 - 38.3.2 Smoluchowski Solution, 476
 - 38.3.3 Self-Similar Solution, 477
 - 38.3.4 Effect of Fractal Structure of Flocs on Flocculation Rate, 478
- 38.4 Coagulation in Shear Flow, 479
 - 38.4.1 Collision Frequency in Shear Field, 479

459

469

- 38.4.2 Interaction between Colloid Particles in Laminar Shear Flow, 480
- 38.4.3 Effect of Formation of Floc Structure on Shear Coagulation Rate, 480
- 38.5 Initial Stage of Bridging Flocculation in a Turbulent Mixing, 481
 - 38.5.1 Schematic Picture of Flocculation with Polymer Flocculants in a Practical System, 481
 - 38.5.2 Collision Process in Turbulent Flow, 481
 - 38.5.3 Historical Review of Concept of Nonequilibrium Flocculation, 483
 - 38.5.4 Initial-Stage Dynamics of Bridging Flocculation of PSL

Particles Induced by Polyelectrolytes under High Ionic Strength, 484

38.6 Conclusion and Future Perspectives, 485 Acknowledgment, 485 References, 485

G

Gel

39 Anisotropic Gel Formation Induced by Dialysis

Toshiaki Dobashi and Takao Yamamoto

- 39.1 Introduction, 487
- 39.2 Dialysis-Induced Gelation, 487
 - 39.2.1 Boundary Conditions, 487
 - 39.2.2 Birefringence of Dialysis-Induced Gel, 488
 - 39.2.3 Trigger for Gelation, 489
 - 39.2.4 Dynamics of Gelation, 489

39.3 Theoretical Treatment of Analysis of Dialysis-Induced Gelation, 489

- 39.3.1 Dynamics of Gelation Induced by a Cross-Linking Agent, 490
 - 39.3.2 Dynamics of Gelation Induced by pH Change, 493
 - 39.3.3 Dynamics of Gelation Accompanied by Transition in Mechanism, 496
 - 39.3.4 Dynamics of Gelation Induced by Dual Mechanisms, 496
- 39.4 Applications of Dialysis-Induced Anisotropic Gels, 497 References, 497

40 Gels

Etsuo Kokufuta

- 40.1 Introduction, 498
- 40.2 Outline of Volume Phase Transition (VPT), 498
- 40.3 Theories of VPT, 500
- 40.4 Understanding VPT at the Molecular Level, 503
- 40.5 Effects of Distribution of Ionic or Hydrophilic Monomer Units Within the Network, 505
- 40.6 Effects of COIL-TO-HELIX Transition in Polypeptide Gels, 507
- 40.7 Effects of Surfactant Binding, 507
- 40.8 Network Inhomogeneity and Swelling-Shrinking Kinetics, 510
- 40.9 Microgels, 511
- 40.10 Conclusions, 512 References, 512

41 Gel Crystals

Tsuneo Okubo

- 41.1 Introduction, 514
- 41.2 Gel Spheres used for Type I Gel Crystals, 517

498

487

- 41.3 Phase Diagram and Morphology of Type I Gel Crystals, 518
- 41.4 Lattice Structure of Type I Gel Crystals, 519
- 41.5 Kinetics of Type I Gel Crystallization, 521
- 41.6 Role of Electrical Double Layers on Type I Gel Crystallization, 522
- 41.7 Rigidity of Type I Gel Crystals, 523
- 41.8 Type II Gel Crystals, 524
- 41.9 Type III Gel Crystals, 524
- 41.10 Type III Gel Crystallization of Gel Agglomerates During Dryness, 524
- 41.11 Conclusions and Future Perspectives, 524 References, 526

Gemini Surfactant

42 Oleic Acid-Based Surfactants as Cost-Effective Gemini Surfactants

Kenichi Sakai and Masahiko Abe

- 42.1 Introduction, 529
- 42.2 Syntheses and Molecular Structures, 529
- 42.3 Dilute Aqueous Solution Properties, 530
- 42.4 Temperature-Concentration Phase Behavior with Water, 533
- 42.5 Characterizing Insoluble Monolayer Films Formed at the Air–Water Interface, 535
- 42.6 Adsorption Characteristics at Solid-Aqueous Solution Interfaces, 535
- 42.7 Concluding Remarks, 537 References, 537

43 Synthesis and Properties of Heterocyclic Cationic Gemini Surfactants 539

Avinash Bhadani, Sukhprit Singh, Hideki Sakai, and Masahiko Abe

- 43.1 Introduction, 539
- 43.2 Pyridinium Gemini Surfactants, 539
- 43.3 Imidazolium Gemini Surfactants, 547
- 43.4 Pyrrolidinium Gemini Surfactants, 552
- 43.5 Piperidinium Gemini Surfactants, 552 References, 553

Η

Hydrogel

44 Functional Hydrogel Microspheres

Daisuke Suzuki, Takuma Kureha, and Koji Horigome

- 44.1 Introduction, 554
- 44.2 Microgel Synthesis, 554
- 44.3 Microgel Characterization, 556
- 44.4 Functional Microgels, 558
 44.4.1 Hybrid Microgels, 558
 44.4.2 Janus Microgels, 558
 44.4.3 Oscillating Microgels, 560
- 44.5 Concluding Remarks, 567 References, 567

554

Hydrophilic-Lipophilic Balance

45 Hydrophilic–Lipophilic Balance (HLB): Classical Indexation and Novel Indexation of Surfactant

Yuji Yamashita and Kazutami Sakamoto

- 45.1 Introduction, 570
- 45.2 Calculations of HLB Number, 570
- 45.3 Practical Side of HLB Theory, 572
- 45.4 Evaluation of Hydrophilicity and Lipophilicity, 572
- 45.5 TLC Evaluation of Amino Acid-Derived Surfactants, 573
- 45.6 Conclusions, 574 References, 574

ENCYCLOPEDIA OF BIOCOLLOID AND BIOINTERFACE SCIENCE

VOLUME 2

Edited by

HIROYUKI OHSHIMA

CONTENTS

List of Contributors Preface		
Ι		
Insulin		
 46 Insulin Fibrillation and Role of Peptides and Small Molecules in its Inhibition Process Victor Banerjee and K.P. Das 46.1 Introduction, 575 	575	
 46.1.1 Protein Fibrillation, 575 46.1.2 Diseases Associated with Protein Fibrillation, 575 46.1.3 Fibrillation of Insulin, 576 46.2 Prevention of Insulin Fibrillation, 580 46.2.1 General Strategies to Prevent Insulin Fibrillation, 580 46.2.2 Peptide-Based Inhibitors of Insulin Fibrillation, 580 46.2.3 Small Molecule Inhibitors of Insulin Fibrillation, 585 46.3 Summary and Conclusion, 588 References, 588 		
Interfacial Water		
47 Interfacial Water Between Charge-Neutralized Polymer and Liquid Water <i>Hiromi Kitano and Makoto Gemmei-Ide</i>	592	
 47.1 Introduction, 592 47.2 Polymer Film Systems, 592 47.3 Zwitterionic Polymer Brush System, 595 47.4 Amphoteric Polymer Brush System, 596 47.5 Conclusion, 596 References, 596 		

L

Langmuir Monolayer Interaction

48 Langmuir Monolayer Interaction of Perfluorooctylated Long-Chain Alcohols With Biomembrane Constituents

Hiromichi Nakahara and Osamu Shibata

- 48.1 Introduction, 597
- 48.2 Thermal Properties of F8HmOH, 597
- 48.3 Langmuir Monolayer Behavior of F8HmOH, 598
- 48.4 Binary Monolayers of DPPC and F8HmOH, 599
 - 48.4.1 The π -A and ΔV -A Isotherms, 599
 - 48.4.2 Excess Gibbs Free Energy, 599
 - 48.4.3 Two-Dimensional Phase Diagram, 601
 - 48.4.4 Brewster Angle Microscopy (BAM), 602
 - 48.4.5 Fluorescence Microscopy (FM), 603
 - 48.4.6 Atomic Force microscopy (AFM), 604
- 48.5 Miscibility of F8HmOH With Lipids, 605
- 48.6 Conclusions and Perspectives, 606 References, 606

Latex

49 Affinity Latex

Haruma Kawaguchi

- 49.1 Introduction, 609
 - 49.1.1 Bioseparation, 609
 - 49.1.2 Affinity Chromatography, 609
- 49.2 Immunolatex, 610
- 49.3 Materials Composing Affinity Latex, 610
 - 49.3.1 Latex Particle as a Ligand Carrier, 610
 - 49.3.2 Procedure for Binding Ligands to a Latex Particle Surface, 610
 - 49.3.3 Binding Site of Ligand Molecule, 611
- 49.4 Comparison Between Affinity Column Chromatography and Affinity Latex, 611
- 49.5 Features of Affinity Latex, 611
 - 49.5.1 Specific Base Sequence ssDNA-Carrying Affinity Latex, 611
 - 49.5.2 Speedy Recovery of Target-Capturing Affinity Particles, 612
- 49.6 Novel Affinity Latex, 613
 - 49.6.1 Capture and Cutting Affinity Latex, 613
 - 49.6.2 Affinity Latex for the Detection of Telomerase, 613
- 49.7 Concluding Remarks and Future Prospects, 613 References, 613

50 Latex Diagnosis

Haruma Kawaguchi

- 50.1 Introduction, 614
- 50.2 Materials Composing Immunolatex, 614
 - 50.2.1 Antigen and Antibody, 614
 - 50.2.2 Latex Particle, 614
- 50.3 Design of Immnolatex, 614
 - 50.3.1 Hemagglutination, 614
 - 50.3.2 Use of Latex Particle as Carrier of Immunocomponents, 615
 - 50.3.3 Improvement of Immunolatex in Terms of Sensitization Mode, 615

614

609

628

642

- 50.4 Measurement of Agglutination, 616
 - 50.4.1 Patterns of Agglutination Test, 616
 - 50.4.2 Antigen Excess Zone, 617
- 50.5 Latex Diagnostics Independent from Agglutination, 617
- 50.6 Multiplex Assay Using Affinity Latex, 618
- 50.7 Concluding Remarks and Future Prospects, 618 References, 618

Light Scattering

- 51 Light Scattering and Electrophoretic Light Scattering of Biopolymers 619 Etsuo Kokufuta
 - 51.1 Introduction, 619
 - 51.2 Static Light Scattering, 619
 - 51.3 Dynamic Light Scattering, 620
 - 51.4 Electrophoretic Light Scattering, 623
 - 51.5 Discussion and Conclusion, 624 References, 627
- Line Tension

52 Impact of Line Tension on Colloidal Systems

Hiroki Matsubara, Takanori Takiue, and Makoto Aratono

- 52.1 Introduction, 628
- 52.2 Domains in Langmuir Monolayers, 628
- 52.3 Modification of Domain Line Tension, 630
- 52.4 Vesicles, 631
- 52.5 Line Tension at Wetting Transitions, 633
- 52.6 Particles at Liquid Surfaces, 636
- 52.7 Foam Films, 637
- 52.8 Summary, 639 References, 639

Lipid

53 Liquid Structures and Properties of Lipids

Makio Iwahashi

- 53.1 Introduction, 642
- 53.2 Comparison of Alcohols with Their Corresponding Fatty Acids in Their Aggregated Structures and Properties, 642
 - 53.2.1 Density and Molar Volume, 642
 - 53.2.2 Viscosity of Fatty Acids and Alcohols, 643
- 53.3 Aggregation Number of Alcohol and Stability of Fatty Acid Dimer, 645
 - 53.3.1 Effect of Molecular Structure on Aggregation Number of Alcohol in CCl₄ and in Its Pure Liquid, 645
 - 53.3.2 Stability of Fatty-Acid Dimers in CCl₄ and in the Pure Liquid State (Melt), 646
- 53.4 Intra- or Intermolecular Movements of Lipids, 647
 - 53.4.1 Segmental Movements (Intramolecular Movements), 647
 - 53.4.2 Intermolecular (Transfer) Movements and Apparent Hydrodynamic Radius for Alkane, Alcohol, Fatty Acid,

and Fatty-Acid Ester, 649

- 53.5 Liquid Structures of Fatty Acids, 650
 - 53.5.1 Fatty Acid Having a Longer Hydrocarbon Chain, 650
 - 53.5.2 Fatty Acid Having a Medium Hydrocarbon Chain, 651
- 53.6 Effect of Cholesterol and Other Additives on the Cluster Structure and Properties of Oleic Acid, 652
- 53.7 Aggregated Structures and Properties of Acylglycerols, 655
 - 53.7.1 Triacylglycerols, 655
 - 53.7.2 Diacylglycerols, 655
 - 53.7.3 Monoacylglycerol, 655
- 53.8 New Application of Fatty-Acid Esters, 656
 - 53.8.1 Application of Fatty-Acid Ester as Insulating Oil in Transformers, 656
 - 53.8.2 An Application of Fatty-Acid Ester for Hepatoma Operation Using a Microcatheter, 656

References, 658

Lipid Bilayer Membrane

54 Birefringence in Lipid Bilayer Membranes

Kiyoshi Mishima

- 54.1 Introduction, 661
- 54.2 Birefringence in Uniaxial Crystals, 661
- 54.3 Birefringence in Lipid Bilayers, 663
- 54.4 Interference with Birefringent Materials, 664
- 54.5 Birefringence Techniques for Analyzing Lipid Bilayer Membranes, 66654.5.1 Dual-Polarization Interferometry (DPI), 667
 - 54.5.2 Optical Waveguide Lightmode Spectroscopy (OWLS), 668
 - 54.5.3 Coupled Plasmon-Waveguide Resonance (CPWR), 668
 - 54.5.4 Polarized Transmitted Light Spectroscopy (PTL), 669

References, 672

Lipid Monolayer

55 Surface States of Lipid Monolayers Containing Gangliosides Shoko Yokovama

674

- 55.1 Introduction, 674
- 55.2 Experimental Materials, 674
- 55.3 Measurement of Surface Pressure, 674
- 55.4 Preparation of LB Film, 675
- 55.5 AFM Observation, 675
- 55.6 Results and Discussion, 675
 - 55.6.1 Single System of Ganglioside Monolayer, 675
 - 55.6.2 Binary System of Ganglioside-Phospholipid, 675
 - 55.6.3 Ternary System of Ganglioside/DPPC/DOPC, 676
 - 55.6.4 Ternary System of Ganglioside/DPPC/Chol, 679
 - 55.6.5 Quaternary System of Ganglioside/DPPC/DOPC/Chol, 680
 - 55.6.6 Five-Component System of Gangliosides/DPPC/DOPC/Chol, 681
- 55.7 Conclusion, 683
 - References, 683

Liponano-capsule

56 Liponanocapsule: A Nanocapsule Built From a Liposomal Template 66

Yuuka Fukui and Keiji Fujimoto

- 56.1 Introduction, 684
- 56.2 Multilayer Coating to Produce Liponanocapsule, 685
- 56.3 Release Behavior of Liponanocapsules, 685
- 56.4 Interaction of Liponano Capsules with Cells, 686
- 56.5 Assembly of Liponanocapsules to Create Freestanding Bioscaffold, 686
- 56.6 Coating with Minerals to Prepare Organic–Inorganic Hybrid Liponanocapsule, 687
- 56.7 Conclusions, 688 References, 688

M

Magnetic Suspension

57 Physical Phenomena of Magnetic Suspensions for Application to Bioengineering

Akira Satoh

- 57.1 Introduction, 690
- 57.2 Simulation Methods for Colloidal Suspensions, 691
 - 57.2.1 Monte Carlo Method, 691
 - 57.2.2 Brownian Dynamics Method for Axisymmetric Particles, 692
- 57.3 Surface Modification, 693
 - 57.3.1 Magnetic Spherical Particle System, 693
 - 57.3.2 Rodlike Particle System, 695
 - 57.3.3 Disklike Particle System, 696
- 57.4 Sedimentation, 699
 - 57.4.1 Introductory Remarks, 699
 - 57.4.2 Particle Model and Simulation Method, 700
 - 57.4.3 Results and Discussion, 700
- 57.5 Conclusion, 701 References, 702

Membrane Electrode

58 Ion-Sensing Membrane Electrodes in Study of Surfactant-Biopolymer Interaction

Sudeshna M. Chatterjea, Koustubh Panda, and Satya P. Moulik

- 58.1 Introduction, 704
- 58.2 Development of Surfactant Ion-Selective Electrodes (SISEs), 70558.2.1 Liquid Membrane Electrodes (LMEs), 705
 - 58.2.2 PVC-Based ISEs, 706
- 58.3 Study of Surfactant Biopolymer Systems Using SISEs, 710
 - 58.3.1 Interactions between Ionic Surfactants and Biopolymers, 711
 - 58.3.2 Kinetic Studies of Surfactant–Biopolymer Interactions Using SISEs, 714
- 58.4 Conclusion, 714

Acknowledgment, 715 References, 715 684

690

Membrane Potential

59 Membrane Potential as a Function of Dielectric Constant

Akihiko Tanioka and Hidetoshi Matsumoto

- 59.1 Introduction, 721
- 59.2 Theoretical Background, 722
 - 59.2.1 Donnan Potential, 722
 - 59.2.2 Membrane Diffusion Potential, 723
 - 59.2.3 Mean Activity Coefficient in Mixed Solvent-Salt Systems, 723
 - 59.2.4 Membrane Potential, 723
 - 59.2.5 Effective Membrane Charge Density, 723
 - 59.2.6 Permeability Coefficient, 725
 - 59.2.7 Mobility of Ions in a Membrane, 725
- 59.3 Materials and Experimental Procedures, 726
 - 59.3.1 Materials, 726
 - 59.3.2 Potentiometric Titration and Measurement of Equilibrium Water Content, 727
 - 59.3.3 Membrane Potential Measurements, 727
 - 59.3.4 Measurement of Modified Degree of Hydration, 727
 - 59.3.5 Measurement of Permeability Coefficient, 727
- 59.4 Results and Discussion, 728

59.4.1 Organic Solution System, 728

59.4.2 Low-Water-Content System, 731

References, 734

Micellar Protein Alpha-crystalline

60 Biophysical Studies of a Micellar Protein α-Crystallin by Fluorescence Methods

Aritra Chowdhury, Rajat Banerjee, and K.P. Das

- 60.1 α -Crystallin, 737
- 60.2 A Brief Introduction to Fluorescence in Proteins, 737
- 60.3 Challenges in Determining α -Crystallin Structure and Preliminary Structural Models Based on Micellar Architecture, 738
- 60.4 Hydrophobicity of α -Crystallin and Its Chaperone Function, 738
- 60.5 Effect of Temperature on Chaperone Function of α -Crystallin, 740
- 60.6 Identification of Chaperone Sites of α -Crystallin Using Hydrophobic Fluorophores, 741
- 60.7 Substrate Conformation Recognized by α -Crystallin: Comparison with Other Chaperones, 741
- 60.8 Subunit Exchange of α -Crystallin and Its Diverse Role, 743
- 60.9 Oligometic Assembly and Unfolding of α -Crystallin, 746
- 60.10 Summary and Conclusions, 750 References, 751

Muscle Contraction

61 Modeling Muscle Contraction Mechanism in Accordance with Sliding-Filament Theory

Toshio Mitsui and Hiroyuki Ohshima

- 61.1 Introduction, 753
- 61.2 Muscle Structures and the Sliding-Filament Theory, 753

737

- 61.3 Thermodynamic Relationship that any Models Based on Sliding-Filament Theory Should Fulfill, 754
 - 61.3.1 Work Done by One Crossbridge Using ATP Hydrolysis energy, 755
 - 61.3.2 Relation between p and T in Sliding-Filament Theory, 755
 - 61.3.3 Thermodynamic Relationship, 756
 - 61.3.4 Values of D/r Estimated from Literature Data, 757
- 61.4 Difficulties of the Power Stroke Model, 757 61.4.1 Difficulty Concerning Magnitude of r, 757
 - 61.4.2 Values of r and D Estimated from Experimental Data, 757
- 61.5 Requirements for any Models Based on Sliding-Filament Theory, 758
- 61.6 Construction of a New Model, 758
 - 61.6.1 Formation of Complex MA₃ by a Myosin Head and Three Actin Molecules, 758
 - 61.6.2 Molecular Model for MA₃, 759
 - 61.6.3 Cooperative Interaction among Crossbridges, 759
 - 61.6.4 Chemical Reactions and Energy Liberation Associated with Force Production, 762
 - 61.6.5 Role of Thermal Fluctuations, 763
- 61.7 Characteristics of the Model That are Helpful for Numerical Calculations, 763
 - 61.7.1 Relation between p and T, 763
 - 61.7.2 Cyclic Force Generation and Parameter y_c , 763
- 61.8 Comparison of Calculation Results with Experimental Data, 764
 - 61.8.1 Existence Probability of Myosin Molecule in Wells in MA₃, 764
 - 61.8.2 Steady Filament Sliding, 764
 - 61.8.3 Transition Phenomena, 766
- 61.9 Summary and Discussion, 768
 - 61.9.1 Requirements for Models, 768 61.9.2 Discussion, 769 References, 769

Ν

Nanocarrier

62 Nanocarriers of Functional Materials From Amino Acid Surfactants 771

Geetha Baskar, S. Angayarkanny, and Asit Baran Mandal

- 62.1 Introduction, 771
- 62.2 Self-Assembly and Aggregated Structures, 772
 62.2.1 Self-Aggregated Structure Formation in Simple Amphiphiles, 772
 62.2.2 Different Chemical Architectures in Surfactants, 773
- 62.3 Polymeric Amphiphiles, 774
 - 62.3.1 Architectures and Formation of Self-Aggregated Structures in Polymeric Amphiphiles, 774
 - 62.3.2 Self-Organisation in Graft Polymers and Other Polymeric Amphiphiles, 774
- 62.4 Amino Acid Surfactants, 775
 - 62.4.1 Highlights of Unique Characteristics of Amino Acid Surfactants, 775
 - 62.4.2 Types of Amino Acid Surfactants, 775
 - 62.4.3 Self-Assembled Structure Formation in Amino Acid Surfactants, 776
 - 62.4.4 Polymeric Amphiphiles from Amino Acids, 777
- 62.5 Polymeric Nanocarriers in Pharmaceutical and Other Applications, 778 62.5.1 Polymeric Nanoparticles, 779
 - 62.5.2 Amino Acid Templates for Synthesis of Nanoparticles, 779

62.6 Summary, 780 Acknowledgments, 780 References, 780

Nanocolloid

63 Syntheses of Metallic Nanocolloids and the Quenching Abilities of Reactive Oxygen Species

Yukihide Shiraishi and Naoki Toshima

- 63.1 Introduction, 784
- 63.2 Monometallic Nanocolloids, 785
 - 63.2.1 Preparation of Monometallic Nanocolloids, 785
 - 63.2.2 Characterization of Metallic Nanocolloids, 786
 - 63.2.3 Application to Reactive Oxygen Species (ROS) Scavengers by Monometallic Nanocolloids, 786
- 63.3 Bimetallic Nanocolloids, 787
 - 63.3.1 Preparation of Bimetallic Nanocolloids, 787
 - 63.3.2 Application to ROS Species Scavengers by Bimetallic Nanocolloids, 788
 Acknowledgments, 789
 - References, 789

Nanocomposite

64 Silver and Gold Nanocomposites: Amino Acid Sidechain Effect on Morphology Zova Zahear and Rafuddin

Zoya Zaheer and Rafiuddin

- 64.1 Introduction, 790
- 64.2 Role of Sidechain, 791
- 64.3 Mechanism in the Formation of Silver Nanoparticles, 792 References, 796

Nanogel

65 Nanogel, an Internally Networked Poly(Amino Acid) Nanoparticle for pH-Responsive Delivery

Jong-Duk Kim and Chan Woo Park

- 65.1 Introduction, 799 65.1.1 pH Sensitivity of Nanogels, 799
 - 65.1.2 Modified Poly(amino acid)s, 800
- 65.2 Preparation of Poly(Amino Acid) Nanogels, 801
 - 65.2.1 Physical Association, 801
 - 65.2.2 Chemical Cross-Linking of Poly(amino acid)s, 801
 - 65.2.3 Morphology of Nanogels prepared from Amphiphilic Polymers, 804
- 65.3 Structure and Characteristics of Nanogel, 805
 - 65.3.1 Shape and Size, 805
 - 65.3.2 Internal Structure, 806
 - 65.3.3 Swelling of Nanogel, 808
- 65.4 pH-Responsive Nanogels, 808
 - 65.4.1 pH-Sensitive Property of Nanogels, 808
 - 65.4.2 pH-Responsive Release of Payloads from Nanogels, 809

790

65.5 Conclusions, 810 References, 810

Nanoparticle

66 Strategies of Metal Nanoparticles for Nanobiology

812

Daisuke Matsukuma and Hidenori Otsuka

- 66.1 Introduction, 812
- 66.2 Metal Nanoparticles, 812
 - 66.2.1 Basic Key Aspects of Metal Nanoparticles for Nanobiology, 813
 - 66.2.2 Noble Metal Nanoparticle, 813
 - 66.2.3 Quantum Dots, 813
 - 66.2.4 Magnetic Nanoparticles, 814
- 66.3 Bioconjugation of Metal Nanoparticles for Nanobiology, 814
- 66.4 Surface Modification of Metal Nanoparticles by Functional Polymers, 815
 - 66.4.1 Natural Polymer Coating of Nanoparticles, 815
 - 66.4.2 Synthetic Polymer Coating of Nanoparticles, 815
 - 66.4.3 Structural Regulated Copolymer for Coating Agent, 816
- 66.5 Reducing Polymers Act as Dispersants for Nanoparticles, 817
- 66.6 Conclusion, 818 References, 818

Phase Separation

68 Phase Separation in Phospholipid Bilayers Induced by Cholesterol

825

Nobutake Tamai, Masaki Goto, and Hitoshi Matsuki

- 68.1 Introduction, 825
- 68.2 Historical Background, 826
- 68.3 Solid–Liquid Phase Diagrams of Binary Mixtures, 827
- 68.4 Phase Transitions of CnPC-Cholesterol Binary Bilayers, 829
 - 68.4.1 Prodan Fluorescence Spectra of Pure and Cholesterol-Containing CnPC Bilayers, 829
 - 68.4.2 Characterization of Phase Transitions of CnPC-Cholesterol Binary Bilayers by DSC, 830
- 68.5 Phase Diagrams of CnPC-Cholesterol Binary Bilayers, 833

- 68.6 Acyl Chain Length Dependence of Characteristic Cholesterol Compositions, 836
- 68.7 Summary, 838 References, 838

69 Phase Separation Phenomena in Drug Systems

Andleeb Z. Naqvi and Kabir-ud-Din

- 69.1 Introduction, 841
- 69.2 Drug-DDS Interactions: Effect of Temperature on Solution, 842
 - 69.2.1 Effect of pH/Concentration, 844
 - 69.2.2 Effect of Electrolytes, 845
 - 69.2.3 Effect of Urea/Thiourea, 846
 - 69.2.4 Effect of Alcohols, 847
 - 69.2.5 Effect of Amines, 848
 - 69.2.6 Effect of Amino Acids, 848
 - 69.2.7 Effect of Sugars, 849
 - 69.2.8 Effect of Polymers, 850
 - 69.2.9 Effect of Surfactants, 850
 - 69.2.10 Effect of Fatty Acids (Sodium Salts), 852
 - 69.2.11 Effect of Bile Salts, 852
 - 69.2.12 Effect of Hydrotropes, 853
 - 69.2.13 Effect of Cyclodextrins, 853
 - 69.2.14 Effect of Phospholipids, 854
 - References, 854

Phosphatidylcholine

70 Bilayer Imaging of Phosphatidylcholines by High-Pressure Fluorometry 860

Masaki Goto, Nobutake Tamai, and Hitoshi Matsuki

- 70.1 Introduction, 860
- 70.2 Prodan Fluorescence Spectra, 860
 - 70.2.1 Fluorescence Measurements, 860
 - 70.2.2 Location of Prodan Distributed in PC Bilayer Membranes, 861
- 70.3 Factors Affecting the Packing State in the PC Bilayer, 862
 - 70.3.1 Effect of Acyl Chain Length, 862
 - 70.3.2 Effect of Vesicle Size, 863
 - 70.3.3 Effect of Acyl Chain Asymmetry, 865
- 70.4 Packing State in the L_c Phase, 866
- 70.5 Conclusions, 868

Acknowledgments, 868 References, 868

Plant-responding Mechanism

71 Physiological and Molecular Aspects of Mechanisms Involved in Plant Response to Salt Stress

870

- Xiaoli Tang, Xingmin Mu, Hongbo Shao, Hongyan Wang, and Marian Brestic
 - 71.1 Introduction, 870
 - 71.2 Growth and Photosynthesis, 871
 - 71.3 Osmotic Stress Effects and Tolerance, 872
 - 71.4 Ion Toxicity and Ion Homeostasis, 872
 - 71.5 Oxidative Stress and Antioxidant Defense Responses, 875

885

905

- 71.6 Phytohormone in Salt Stress, 876
- 71.7 Conclusions, 876 Acknowledgments, 878 References, 878

Pulmonary Surfactant

72 Interfacial Phenomena of Pulmonary Surfactant Preparations

Hiromichi Nakahara, Sannamu Lee, and Osamu Shibata

- 72.1 Introduction, 885
- 72.2 Isotherm Behavior of the Lipids and Peptide, 886
- 72.3 Interaction Between the Lipids and Peptide, 888
- 72.4 Hysteresis in π -A and ΔV -A Isotherms, 890
- 72.5 Morphological Phase Behavior, 891
 - 72.5.1 Fluorescence Microscopy (FM), 891
 - 72.5.2 Atomic Force Microscopy (AFM), 892
- 72.6 Polarized ATR-FTIR Spectra, 894
- 72.7 PM-IRRAS Spectra at the Air–Water Interface, 895
 - 72.7.1 The in situ PM-IRRAS Spectra in the Amide Region, 895
 - 72.7.2 Secondary Structure Transformation of Hel 13–5, 897
 - 72.7.3 Lipid Stretching Vibration Modes, 898
- 72.8 Conclusions, 901 References, 902

73 Using Thin Liquid Film for Study of Pulmonary Surfactants

Dotchi Exerowa, Roumen Todorov, and Dimo Platikanov

- 73.1 Introduction, 905
- 73.2 Experimental Technique, 905
- 73.3 Physicochemical Properties Studied by the Thin Liquid Film Method, 907
- 73.4 Pulmonary Surfactants, 909
- 73.5 Method for Lung Maturity Assessment, 909
- 73.6 Foam Films from Pulmonary Surfactant and Its Components, 910
- 73.7 Thin Liquid Wetting Films from Pulmonary Surfactant Solutions, 912
- 73.8 Conclusion, 913
 - References, 913

Receptor-ligand Interaction

74 Probing Receptor-Ligand Interactions on a *Single* Molecule Level Using Optical Tweezers

915

Tim Stangner, Carolin Wagner, Christof Gutsche, Konstanze Stangner, David Singer, Stefano Angioletti-Uberti, and Friedrich Kremer

- 74.1 Introduction, 915
- 74.2 Methodology, 916
 - 74.2.1 The Setup, 916
 - 74.2.2 Trapping Basics and Force Calculation, 917
 - 74.2.3 Position Detection in Three Dimensions, 917
 - 74.2.4 Other Methods for Characterizing Receptor-Ligand Interactions, 920

- 74.3 Theoretical Description of Receptor-Ligand Interactions, 921
 - 74.3.1 An Ideal Bond, 921
 - 74.3.2 Force-Induced Bond Rupture: The Dudko—Hummer–Szabo Model, 922
- 74.4 Case Studies, 923
 - 74.4.1 Measurement Procedure, 923
 - 74.4.2 Ensuring Single Binding Events and Specificity, 924
 - 74.4.3 Reducing the Data Variance in Dynamic Force Spectroscopy Measurements Using Presorted Particles, 924
 - 74.4.4 Dynamic Force Spectroscopy on the Binding of Monoclonal Antibodies and τ -Peptides, 926
 - 74.4.5 Determining the Specificity of a Monoclonal Antibody Using Dynamic Force Spectroscopy, 927
- 74.5 Conclusion, 929 References, 929

S

Soft Particle

75 AC Electrokinetics of Concentrated Suspensions of Soft and Hairy Nanoparticles: Model and Experiments

Silvia Ahualli, Ángel V. Delgado, Félix Carrique, and María Luisa Jiménez

- 75.1 Introduction, 933
- 75.2 Basic Equations, 934
 - 75.2.1 General Overview and Notation Used, 934
 - 75.2.2 The Case of Grafted Polymer: Spherical Polyelectrolyte Brushes (SPBs), 937
 - 75.2.3 Expressions for Electrophoretic Mobility and Permittivity of the Suspension, 937
- 75.3 Some Predictions, 938
 - 75.3.1 Soft Particles, 938
 - 75.3.2 Brushlike Particles, 939
- 75.4 Experimental Verification, 941
- 75.4.1 Soft Particles, 941 75.4.2 Polyelectrolyte Brushes, 941
- 75.5 Conclusion, 943 Acknowledgment, 944 References, 944

76 Electrophoretic Behavior of pH-Regulated Soft Biocolloids

Li-Hsien Yeh and Jyh-Ping Hsu

- 76.1 Introduction, 946
- 76.2 Theoretical Model, 947
 - 76.2.1 General Electrokinetic Equations, 947
 - 76.2.2 Boundary Conditions, 948
 - 76.2.3 Forces Acting on a Soft Particle, 948
 - 76.2.4 Perturbation Approach, 949
- 76.3 Electrophoresis of a pH-Regulated Soft Biocolloid, 950
 - 76.3.1 Governing Equations, 951
 - 76.3.2 Boundary Conditions, 952
 - 76.3.3 Solution Procedure, 952

933

961

970

- 76.3.4 Model Validation by Experimental Data, 953
- 76.3.5 Electrokinetics of a pH-Regulated Soft Biocolloid, 955
- 76.4 Summary, 956
- 76.5 Notations, 957

Greek Letters, 958 Superscripts, 959 Subscripts, 959 Prefix. 959 References, 959

77 Electrophoretic Mobility of Soft Particles

Kimiko Makino and Hiroyuki Ohshima

- 77.1 Introduction, 961
- 77.2 Electrophoretic Mobility of Hard Particles, 961
- 77.3 Electrophoretic Mobility of Soft Particles, 962
- 77.4 Analysis of Electrophoretic Mobility of Soft Particles, 965
 - 77.4.1 RAW117 Lymphosarcoma Cells and Their Variants, 965
 - 77.4.2 Poly(N-isopropylacrylamide) Hydrogel–Coated Latex, 966
- 77.5 Electrophoresis of Nonuniformly Charged Soft Particles, 967 References, 968

78 Potential Distribution Around a Hard Particle and a Soft Particle

Hiroyuki Ohshima

- 78.1 Introduction, 970
- 78.2 Hard Particles, 970
- 78.3 Soft Particles, 974
- 78.4 Discrete-Charge Effect, 975 References, 978

Soil

79	Soil Interfacial Electrical Phenomena			
	Munehide Ishiguro			
	79.1	Introduction, 979		
	79.2 Ion Transport in Soils, 979			
		79.2.1 Influence of Electric Charge on Ion Transport, 979		
		79.2.2 Influence of Selectivity Coefficient, Distribution Ratio, and		
		Peclet Number on Ion Transport, 982		
	79.3	Soil Dispersion and Flocculation, 983		
	79.4 Influence of Dispersion on Soil Permeability, 985			
	79.5 Surfactant Adsorption, 988			
	79.6	Ion Exclusion and Salt Sieving, 991		
		References, 992		
So	lid-wat	er Interface		
80	Pharm	aceutical Solid–Water Interface Phenomena Measured by		

Near-Infrared Spectroscopy Yusuke Hattori and Makoto Otsuka

- 80.1 Introduction, 994
- 80.2 Exploration of Interface Phenomena Using Near-Infrared Spectroscopy, 995

- 80.2.1 Initial Dissolution of Compressed Solids, 996
- 80.2.2 Hydration and Swelling of Disintegrating Agents:
 - Two-Dimensional Correlation Spectroscopy (2DCOS), 998
- 80.3 Conclusion, 1001 References, 1002

Stability

81 Colloid Stability of Biocolloidal Dispersions

Tharwat Tadros

- 81.1 Introduction, 1004
- 81.2 Kinetic Stability of Biocolloidal Dispersion Systems and General Stabilization Mechanisms, 1004
 - 81.2.1 Electrostatic Stabilization, 1004
 - 81.2.2 Steric Stabilization, 1006
- 81.3 Nanoemulsions, 1007
 - 81.3.1 Preparation of Nanoemulsions, 1008
 - 81.3.2 Steric Stabilisation and Role of Adsorbed Layer Thickness, 1008
 - 81.3.3 Ostwald Ripening, 1009
- 81.4 Nanobiodegradable Dispersions, 1010
- 81.5 Liposomes and Vesicles in Pharmaceuticals, 1011 References, 1013

82 Stability Ratio and Early-Stage Aggregation Kinetics of Colloidal Dispersions

1014

1020

Hiroyuki Ohshima

- 82.1 Introduction, 1014
- 82.2 DLVO Theory of Colloid Stability and the Stability Ratio, 1014
- 82.3 Approximate Analytic Expressions for the Stability Ratio W, 1016
- 82.4 Rate Equations for Early-Stage Aggregation Kinetics of Colloidal Particles, 1017
- 82.5 Approximate Solution to the Rate Equation, 1018 References, 1019

Surfactant

83 Catanionic Surfactants: Novel Surrogates of Phospholipids

Kausik Manna and Amiya Kumar Panda

- 83.1 Introduction, 1020
- 83.2 Classifications, 1021
- 83.3 Preparation and Isolation, 1029
 - 83.3.1 Extraction Method, 1029
 - 83.3.2 Precipitation Method, 1029
 - 83.3.3 Ion Exchange Method, 1029
 - 83.3.4 Evaporation Method, 1029
 - 83.3.5 Proton Exchange Method, 1029
- 83.4 Characterization of Isolated IPA, 1029
 - 83.4.1 ¹H-NMR Spectroscopy, 1029
 - 83.4.2 FT-IR Spectroscopy, 1030
 - 83.4.3 X-Ray Diffraction Study, 1030

83.5	Properties,	1031
------	-------------	------

- 83.5.1 Properties of Catanionic Surfactants as Functions
 - of Composition and Concentration, 1031
- 83.5.2 Properties of Isolated IPA, 1035
- 83.6 Catanionic Micelles, 1036
- 83.7 Catanionic Vesicles: Catanosomes, 1037
 - 83.7.1 Preparation Methods, 1037
 - 83.7.2 Stability of Catanosomes, 1038
- 83.8 Applications of IPA/Catanionic Surfactants, 1039
 83.8.1 Drug Delivery, 1039
 83.8.2 Templates for Nanomaterial Synthesis, 1040
- 83.9 Challenges and Future Perspectives, 1041 References, 1041

84 Phase Behavior of Natural-Sourced Surfactant Systems

Kenji Aramaki

- 84.1 Introduction, 1044
- 84.2 Sugar-Based Surfactants, 1044
- 84.3 Glycerol-Based Surfactants, 1046 References, 1050
- **85** Surfactants and Biosurfactants

Youichi Takata

- 85.1 Introduction, 1051
- 85.2 General Surfactants, 1051
 - 85.2.1 Hydrophobic Group, 1051
 - 85.2.2 Hydrophilic Group, 1052
 - 85.2.3 Novel Surfactants, 1053
- 85.3 Biosurfactants, 1054 References, 1055

Surface Active Drug

86 Effect of Additives on Self-Association and Clouding Phenomena of Various Surface-Active Drugs

Md. Sayem Alam and Asit Baran Mandal

- 86.1 Introduction, 1056
- 86.2 Surface Properties, Self-Association, and Mixed Micellization of Surface-Active Drugs with and Without Additives, 1059
- 86.3 Effect of Additives on Clouding Behavior of Amphiphilic Drug Solutions, 1062
 - 86.3.1 Effect of pH, 1062
 - 86.3.2 Effect of Electrolytes, 1062
 - 86.3.3 Effect of Surfactants, 1064
 - 86.3.4 Effect of Additives at Different Fixed pHs, 1064
 - 86.3.5 Effect of Additives at Different Fixed Drug Concentrations, 1064
- 86.4 Thermodynamics at CP, 1065
 - 86.4.1 Effect of Surfactants, 1066
- 86.5 Conclusions, 1067 Acknowledgment, 1067 References, 1067

1044
