<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Stereoelectronic effects – orbital interactions in control of structure and reactivity	1
1.2	Orbital interactions in theoretical chemistry	3
1.3	The birth of stereoelectronic concepts in organic chemistry	4
References		6
<b>2</b>	<b>Direct Effects of Orbital Overlap on Reactivity</b>	<b>8</b>
2.1	Bond formation without bond breaking: types of overlap in two-orbital interactions	9
2.1.1	Factors controlling $\sigma$ -bond overlap	12
2.2	Bond formation coupled with bond breaking	25
2.2.1	Three-orbital interactions: stereoelectronic reasons for the preferred trajectories of intermolecular attack at a chemical bond	25
2.3	Stereoelectronics of supramolecular interactions	29
2.3.1	FMO interactions in intermolecular complexes	29
2.3.2	Expanding the palette of supramolecular interactions: from H-bonding to Li-, halogen, pnictogen, chalcogen and tetrel binding	30
References		36
<b>3</b>	<b>Beyond Orbital Overlap: Additional Factors Important for Orbital Interactions. Classifying Delocalizing Interactions</b>	<b>42</b>
3.1	Electronic count: two-electron, one-electron and three-electron bonds	43
3.2	Isovalent vs. sacrificial conjugation	48
3.3	Neutral, negative, and positive hyperconjugation	49
References		52
<b>4</b>	<b>Computational and Theoretical Approaches for Studies of Stereoelectronic Effects</b>	<b>54</b>
4.1	Quantifying orbital interactions	54
4.2	Localized orbitals from delocalized wavefunctions	56

<b>5 General Stereoelectronic Trends – Donors, Acceptors, and Chameleons</b>	<b>62</b>
5.1 Three types of delocalization: conjugation, hyperconjugation, and $\sigma$ -conjugation	62
5.2 Geminal and vicinal interactions	63
5.3 Stereoelectronic main rule: antiperiplanarity	64
5.3.1 Effects of bond polarity	65
5.3.2 Polarity-induced acceptor anisotropy	68
5.4 Scales of donor and acceptor ability of orbitals: polarization, hybridization, and orbital energy effects	68
5.4.1 Donors	68
5.4.2 Acceptors	81
5.4.3 Stereoelectronic chameleons: donors masquerading as acceptors	84
5.5 Cooperativity of stereoelectronic effects and antiperiplanar lone pair hypothesis (ALPH) theory – several donors working together	91
5.6 Summary	92
References	92
<b>6 Stereoelectronic Effects with Donor and Acceptor Separated by a Single Bond Bridge: The Broad Spectrum of Orbital Contributions to Conformational Analysis</b>	<b>97</b>
6.1 $\sigma/\sigma$ -Interactions	99
6.1.1 Rotational barrier in ethane	99
6.1.2 Axial/equatorial equilibrium in methylcyclohexane	105
6.1.3 The gauche effect	110
6.2 $\sigma/\pi$ -Interactions	113
6.2.1 “Eclipsed” and “staggered” conformations of alkenes – stereoelectronic misnomers	114
6.2.2 Carbonyls	117
6.2.3 Strained bonds	121
6.3 $p/\sigma$ -Interactions	122
6.3.1 Primary, secondary, tertiary carbocation stabilization	122
6.3.2 Hyperconjugomers of cyclohexyl cations	124
6.3.3 $\beta$ -Silicon effect and related $\beta$ -effects	124
6.4 $n/\sigma$ -Interactions	126
6.4.1 Anomeric effects	129
6.4.2 Reverse anomeric effect	142
6.4.3 “Anomeric effects without lone pairs”: beyond the $n \rightarrow \sigma^*$ interactions	143
6.5 $n/\pi$ -Interactions	147
6.5.1 Esters and related carboxylic acid derivatives	147
6.5.2 Vinyl ethers and enamines	157
6.6 $\pi/\pi$ -Interactions	167
6.6.1 Hyperconjugation in alkynes and its relation to the “absence” of conjugation between two triple bonds in 1,3-dynes	168
References	170
<b>7 Stereoelectronic Effects with Donor and Acceptor Separated by a Vinyl Bridge</b>	<b>183</b>
7.1 $\sigma/\sigma^*$ interactions	184
7.1.1 <i>Cis</i> -effect: the case of two $\sigma$ -acceptors	184

7.2	$\sigma/\pi$ interactions: allenes vs. alkenes	185
7.2.1	Neutral systems	185
7.2.2	Anions	186
7.2.3	Positive conjugation and hyperconjugation in vinyl systems	187
7.2.4	$\sigma \rightarrow \pi^*$ delocalization in allenes: allenyl silanes in reactions with electrophiles	188
7.3	Vinyl halides and their carbanions (transition from $\sigma_{\text{C-H}} \rightarrow \sigma^*_{\text{C-Hal}}$ to $n_{\text{C}} \rightarrow \sigma^*_{\text{C-Hal}}$ interactions)	192
7.3.1	Heteroatom-containing systems	195
7.4	Diazenes and the isomerization of azo compounds	196
7.5	Antiperiplanarity in coordinated bond-breaking and bond-forming processes: eliminations, fragmentations and additions	199
7.6	Syn-periplanarity: the second best choice	207

<b>8</b>	<b>Remote Stereoelectronic Effects</b>	<b>214</b>
8.1	Extended through space interactions: homoconjugation and homohyperconjugation	215
8.1.1	Homoconjugation	215
8.1.2	Homoanomeric effects	217
8.1.3	Cross-hyperconjugation	223
8.2	Double hyperconjugation and through-bond interactions	223
8.3	Combined through-bond and through-space interactions	228
8.4	Symmetry and cooperativity effects in cyclic structures	229
8.4.1	Hyperaromaticity	229
8.4.2	$\sigma$ -Aromaticity	230
8.4.3	Double aromaticity	231
	References	231
<b>9</b>	<b>Transition State Stabilization with Stereoelectronic Effects: Stereoelectronic Control of Reaction Bottlenecks</b>	<b>236</b>
9.1	Torquoselectivity	240
9.2	Diastereoselection in nucleophilic addition to carbonyl compounds and other $\pi$ -systems	243
9.3	Electrophilic addition to enamines	245
9.4	Hyperconjugative assistance to alkyne bending and alkyne cycloadditions	246
9.5	Negative conjugation – donation from oxygen lone pairs to breaking bonds	248
9.6	Remote lone pairs in radical reactions: fragmentations	251
	References	254
<b>10</b>	<b>Stereoelectronic Effects in Reaction Design</b>	<b>257</b>
10.1	Static stereoelectronics	257
10.2	Dynamic stereoelectronics	259
	References	273
<b>11</b>	<b>Stereoelectronic Effects in Action: The Many Doors Opened by Orbital Interactions</b>	<b>275</b>
11.1	Gauche effect ( $\sigma \rightarrow \sigma^*$ interactions)	275
11.2	Trans-effect – the cousin of gauche effect in organometallic chemistry	283

11.3	Anomeric effects ( $n \rightarrow \sigma^*$ interactions)	284
11.3.1	Cooperativity and anticooperativity in anomeric systems	288
11.3.2	Spectrum of armed and disarmed glycosides	289
11.3.3	Restoring exo-anomeric effect in carbasugars	294
11.4	Bioorganic chemistry and enzyme reactions	311
