## Contents

List of Contributors *xv*

Preface *xix*

- 1 Incorporation of Boron into  $\pi$ -Conjugated Scaffolds to Produce Electron-Accepting  $\pi$ -Electron Systems *1*  
*Atsushi Wakamiya*
  - 1.1 Introduction *1*
  - 1.2 Boron-Containing Five-Membered Rings: Boroles and Dibenzoboroles *2*
  - 1.3 Annulated Boroles *8*
  - 1.4 Boron-Containing Seven-Membered Rings: Borepins *11*
  - 1.5 Boron-Containing Six-Membered Rings: Diborins *14*
  - 1.6 Planarized Triphenylboranes and Boron-Doped Nanographenes *17*
  - 1.7 Conclusion and Outlook *22*  
References *22*
- 2 Organoborane Donor–Acceptor Materials *27*  
*Sanjoy Mukherjee and Pakkirisamy Thilagar*
  - 2.1 Organoboranes: Form and Functions *27*
  - 2.2 Linear D-A Systems *29*
  - 2.3 Non-conjugated D-A Organoboranes *32*
  - 2.4 Conjugated Nonlinear D-A Systems *33*
  - 2.5 Polymeric Systems *36*
  - 2.6 Cyclic D-A Systems: Macrocycles and Fused-Rings *39*
  - 2.7 Conclusions and Outlook *43*  
References *43*
- 3 Photoresponsive Organoboron Systems *47*  
*Soren K. Mellerup and Suning Wang*
  - 3.1 Introduction *47*
    - 3.1.1 Four-Coordinate Organoboron Compounds for OLEDs *47*
    - 3.1.2 Photochromism *49*
  - 3.2 Photoreactivity of (ppy)BMe<sub>2</sub> and Related Compounds *50*
    - 3.2.1 Photochromism of (ppy)BMe<sub>2</sub> *50*
    - 3.2.2 Mechanism *51*

- 3.2.3 Derivatizing (ppy)BMes<sub>2</sub>: Impact of Steric and Electronic Factors on Photochromism 52
  - 3.2.3.1 Substituents on the ppy Backbone 52
  - 3.2.3.2 Aryl Groups on Boron: Steric versus Electronic Effect 54
  - 3.2.3.3  $\pi$ -Conjugation and Heterocyclic Backbones 56
  - 3.2.3.4 Impact of Different Donors 58
  - 3.2.3.5 Polyboryl Species 60
- 3.3 Photoreactivity of BN-Heterocycles 62
  - 3.3.1 BN-Isosterism and BN-Doped Polycyclic Aromatic Hydrocarbons (PAHs) 62
  - 3.3.2 Photoelimination of (2-Benzylpyridyl)BMes<sub>2</sub> 62
    - 3.3.3 Mechanism 64
    - 3.3.4 Scope of Photoelimination: The Chelate Backbone 65
    - 3.3.5 Strategies of Enhancing  $\Phi_{PE}$ : Metalation and Substituents on Boron 66
  - 3.4 New Photochromism of BN-Heterocycles 68
    - 3.4.1 Photochromism of (2-Benzylpyridyl)BMes<sub>2</sub><sup>F</sup> and Related Compounds 68
    - 3.4.2 Mechanism 70
  - 3.5 Exciton Driven Elimination (EDE): *In situ* Fabrication of OLEDs 70
  - 3.6 Summary and Future Prospects 73
  - References 74
  
- 4 Incorporation of Group 13 Elements into Polymers 79  
*Yi Ren and Frieder Jäkle*
  - 4.1 Introduction 79
  - 4.2 Tricoordinate Boron in Conjugated Polymers 80
  - 4.3 Tetracoordinate Boron Chelate Complexes in Polymeric Materials 87
    - 4.3.1 N-N Boron Chelates 88
    - 4.3.2 N-O Boron Chelates 91
    - 4.3.3 N-C Boron Chelates 92
  - 4.4 Polymeric Materials with B-P and B-N in the Backbone 92
  - 4.5 Polymeric Materials Containing Borane and Carborane Clusters 97
  - 4.6 Polymeric Materials Containing Higher Group 13 Elements 101
  - 4.7 Conclusions 105
  - Acknowledgements 106
  - References 106
  
- 5 Tetracoordinate Boron Materials for Biological Imaging 111  
*Christopher A. DeRosa and Cassandra L. Fraser*
  - 5.1 Introduction 111
    - 5.1.1 Introduction to Luminescence 111
    - 5.1.2 Tetracoordinate Boron Dye Scaffolds 113
  - 5.2 Small Molecule Fluorescence Imaging Agents 114
    - 5.2.1 Bright Fluorophores 116
    - 5.2.2 Solvatochromophores 117
    - 5.2.3 Molecular Motions of Boron Dyes 118
      - 5.2.3.1 Molecular Rotors 121
      - 5.2.3.2 Turn-On Probes 121

- 5.3 Polymer Conjugated Materials 124
  - 5.3.1 Dye–Polymer Systems 124
  - 5.3.2 Oxygen-Sensing Polymers 126
  - 5.3.3 Energy Transfer in Polymers 129
  - 5.3.4 Conjugated Polymers 130
  - 5.3.5 Aggregation-Induced Emission Polymers 130
- 5.4 Conclusion and Future Outlook 133
- References 133
  
- 6 Advances and Properties of Silanol-Based Materials 141
  - Rudolf Pietschnig*
  - 6.1 Introduction 141
  - 6.2 Preparation 141
  - 6.3 Reactivity 143
    - 6.3.1 Adduct Formation 143
    - 6.3.2 Metallation 145
    - 6.3.3 Condensation 146
  - 6.4 Properties and Application 148
    - 6.4.1 Surface Modification 148
    - 6.4.2 Catalysis 154
    - 6.4.3 Bioactivity 155
      - 6.4.3.1 Monosilanols 155
      - 6.4.3.2 Silanediols 156
      - 6.4.3.3 Silanetriols 157
    - 6.4.4 Supramolecular Assembly 158
  - References 159
  
- 7 Silole-Based Materials in Optoelectronics and Sensing 163
  - Masaki Shimizu*
  - 7.1 Introduction 163
  - 7.2 Basic Aspects of Silole-Based Materials 164
  - 7.3 Silole-Based Electron-Transporting Materials 167
  - 7.4 Silole-Based Host and Hole-Blocking Materials for OLEDs 170
  - 7.5 Silole-Based Light-Emitting Materials 171
  - 7.6 Silole-Based Semiconducting Materials 175
  - 7.7 Silole-Based Light-Harvesting Materials for Solar Cells 179
  - 7.8 Silole-Based Sensing Materials 185
  - 7.9 Conclusion 189
  - References 190
  
- 8 Materials Containing Homocatenated Polysilanes 197
  - Takanobu Sanji*
  - 8.1 Introduction 197
  - 8.2 Synthesis 197
  - 8.3 Functional Modification of Polysilanes 198
  - 8.4 Control of the Stereochemistry of Polysilanes 199
  - 8.5 Control of the Secondary Structure of Polysilanes 200

- 8.6 Polysilanes with 3D Architectures 202
- 8.7 Applications 203
- 8.8 Summary 205
- References 205
  
- 9 Catenated Germanium and Tin Oligomers and Polymers 209  
*Daniel Foucher*
- 9.1 Introduction 209
- 9.2 Oligogermanes and Oligostannanes 209
- 9.3 Preparation of Polygermanes 212
- 9.3.1 Wurtz Coupling 212
- 9.3.2 Reductive Coupling of Dihalogermynes 214
- 9.3.3 Electrochemical Reduction of Dihalodiorganogermanes and Trihaloorganogermanes 215
- 9.3.4 Transition Metal-Catalyzed Polymerizations of Germanes 215
- 9.3.4.1 Demethanative Coupling of Germanes 216
- 9.3.5 Photodecomposition of Germanes 218
- 9.3.6 Properties and Characterization of Polygermanes 218
- 9.3.6.1 Thermal Properties of Polygermanes 218
- 9.3.6.2 Electronic Properties of Polygermanes 219
- 9.4 Preparation of Polystannanes 220
- 9.4.1 Wurtz Coupling 220
- 9.4.2 Electrochemical Synthesis 221
- 9.4.3 Dehydropolymerization 224
- 9.4.4 Alternating Polystannanes 227
- 9.4.5 Properties and Characterization of Polystannanes 227
- 9.4.5.1  $^{119}\text{Sn}$  NMR 227
- 9.4.5.2 Thermal and Photostability 228
- 9.4.5.3 Electronic Properties 230
- 9.4.5.4 Conductivity 231
- 9.4.6 Molecular Modeling of Oligostannanes and Comparison of Group 14 Polymetallanes 231
- 9.5 Conclusions and Outlook 233
- Acknowledgements 233
- References 234
  
- 10 Germanium and Tin in Conjugated Organic Materials 237  
*Yohei Adachi and Joji Ohshita*
- 10.1 Introduction 237
- 10.2 Germanium and Tin-Linked Conjugated Polymers 238
- 10.2.1 Germylene-Ethynylene Polymers 238
- 10.2.2 Fluorene- and Carbazole-Containing Germylene Polymers 240
- 10.2.3 Germanium- and Tin-Linked Ferrocenes and Related Compounds 241
- 10.3 Germanium- and Tin-Containing Conjugated Cyclic Systems 242
- 10.3.1 Non-fused Germales and Stannoles 242
- 10.3.2 Dibenzogermoles and Dibenzostannoles 248

10.3.3	Dithienogermole and Dithienostannole	253
10.3.4	Other Fused Germoles	258
10.3.5	Germacycloheptatriene and Digermacyclohexadiene	259
10.4	Summary and Outlook	260
