	List of Contributors	<i>xxxi</i>
	Preface	<i>xxxiii</i>
1	Aliphatic Nucleophilic Substitution	1
	<i>Jade D. Nelson</i>	
1.1	Introduction	1
1.2	Oxygen Nucleophiles	1
1.2.1	Reactions with Water	1
1.2.1.1	Hydrolysis of Alkyl Halides	1
1.2.1.2	Hydrolysis of <i>gem</i> -Dihalides	2
1.2.1.3	Hydrolysis of 1,1,1-Trihalides	2
1.2.1.4	Hydrolysis of Alkyl Esters of Inorganic Acids	3
1.2.1.5	Hydrolysis of Diazo Ketones	3
1.2.1.6	Hydrolysis of Acetals, Enol Ethers, and Related Compounds	3
1.2.1.7	Hydrolysis of Silyl Enol Ethers	5
1.2.1.8	Hydrolysis of Silyl Ethers	5
1.2.1.9	Hydrolysis of Epoxides	6
1.2.2	Reactions with Alcohols	6
1.2.2.1	Preparation of Ethers from Alkyl Halides	6
1.2.2.2	Preparation of Methyl Ethers	7
1.2.2.3	Preparation of Ethers from Alkyl Sulfonates	9
1.2.2.4	Iodoetherification	9
1.2.2.5	Preparation of Silyl Ethers	9
1.2.2.6	Cleavage of Silyl Ethers with Alcohols	10
1.2.2.7	Transesterification	10
1.2.2.8	Preparation of Epoxides	11
1.2.2.9	Reaction of Alcohols with Epoxides	12
1.2.2.10	The Reaction of Alcohols with Diazo Compounds	12
1.2.2.11	Preparation of Ethers via Dehydration of Alcohols	13
1.2.2.12	Addition of Alcohols to Boron, Phosphorous, and Titanium	13
1.2.3	Reactions with Carboxylates	14
1.2.3.1	Alkylation of Carboxylic Acid Salts	14
1.2.3.2	Iodolactonization	14
1.2.3.3	Preparation of Silyl Esters	15
1.2.3.4	Preparation of Mixed Organic–Inorganic Anhydrides	15
1.2.3.5	Cleavage of Ethers with Acetic Anhydride	16
1.2.3.6	Alkylation of Carboxylic Acids and Enols with Diazo Compounds	16
1.2.4	Reactions with Other Oxygen Nucleophiles	17
1.2.4.1	Formation of Silyl Enol Ethers and Silyl Ketene Acetals	17
1.2.4.2	Formation of Enol Triflates	18
1.2.4.3	Formation of Oxonium Salts	19
1.2.4.4	Reactions of Carbonyl Compounds with Oxonium Salts	19
1.2.4.5	Preparation of Hydroperoxides and Peroxyethers	19

1.2.4.6	Alkylation of Oximes	20
1.3	Phosphorus Nucleophiles	21
1.3.1	Preparation of Reagents for Wittig Reactions	21
1.4	Sulfur Nucleophiles	21
1.4.1	Reactions with Thiols	21
1.4.1.1	Preparation of Thioethers	21
1.4.1.2	Cleavage of Arylmethyl Ethers	22
1.4.2	Alkylation of Sulfides	22
1.4.3	Reactions with Other Sulfur Nucleophiles	22
1.4.3.1	Preparation of Thiols	22
1.4.3.2	Formation of Bunte Salts	24
1.4.3.3	Alkylation of Sulfinic Acid Salts	24
1.4.3.4	Attack by Sulfite Ion	25
1.4.3.5	Preparation of Alkyl Thiocyanates	25
1.5	Nitrogen Nucleophiles	26
1.5.1	Amine Alkylation	26
1.5.1.1	Amine Alkylation with Alkyl Halides and Onium Salts	26
1.5.1.2	Amine Alkylation with Inorganic Esters	27
1.5.1.3	Amine Alkylation with Alcohols	29
1.5.1.4	Amine Alkylation with Diazo Compounds	30
1.5.1.5	Transamination	30
1.5.1.6	Amine Alkylation with Epoxides	30
1.5.1.7	Amine Alkylation with Cyclic Carbonates	31
1.5.1.8	Preparation of 1° Amines via Hexamethyldisilazane	32
1.5.1.9	Preparation of Isocyanides (“Isonitriles”)	32
1.5.1.10	Methylation of Amines, the Eschweiler–Clarke reaction	33
1.5.1.11	Preparation Sulfenamides	33
1.5.2	N-Alkylation of Amides, Lactams, Imides, and Carbamates	34
1.5.2.1	Alkylation with Alkyl Halides	34
1.5.2.2	Alkylation with Alkyl Sulfonates and Derivatives	35
1.5.3	Other Nitrogen Nucleophiles	36
1.5.3.1	Nitrite Nucleophiles: Preparation of Nitro Compounds	36
1.5.3.2	Azide Nucleophiles	36
1.5.3.3	Isocyanates and Isothiocyanates as Nucleophiles	37
1.6	Halogen Nucleophiles	38
1.6.1	Attack by Halides at Alkyl Carbon or Silicon	38
1.6.1.1	Halide Exchange	38
1.6.1.2	Preparation of Halides from Sulfonic Acid Esters	38
1.6.1.3	Preparation of Alkyl Halides from Alcohols	39
1.6.1.4	Preparation of Alkyl Halides from Ethers	40
1.6.1.5	Preparation of Alkyl Halides from Epoxides	41
1.6.1.6	Cleavage of Alkyl Ethers with Halide Ion	42
1.6.1.7	Cleavage of Silyl Ethers and Silyl Enol Ethers with Halide Ion	44
1.6.1.8	Cleavage of Carboxylic Acid and Sulfonic Acid Esters with Halide Ion	45
1.6.1.9	Preparation of Halides from α -Diazo Carbonyl Compounds	46
1.6.1.10	Preparation of Cyanamides	46
1.7	Carbon Nucleophiles	47
1.7.1	Attack by Carbon at Alkyl Carbon	47
1.7.1.1	Direct Coupling of Alkyl Halides	47
1.7.1.2	Reactions of Organometallic Reagents with Alkyl Halides	47
1.7.1.3	Couplings of Allylic and Propargylic Halides	48
1.7.1.4	Couplings of Organometallic Reagents with Sulfonate Esters	49
1.7.1.5	Couplings Involving Alcohols	49
1.7.1.6	Reactions of Organometallic Reagents with Allylic Esters and Carbonates	50

1.7.1.7	Reactions of Organometallic Reagents with Epoxides	50
1.7.1.8	Alkylation of Malonate and Acetoacetate Derivatives	51
1.7.1.9	Alkylation of Aldehydes, Ketones, Nitriles, and Carboxylic Esters	51
1.7.1.10	Alkylation of Carboxylic Acid Salts	54
1.7.1.11	Alkylation α to a Heteroatom	54
1.7.1.12	Alkylation α to a Masked Carboxylic Acid	56
1.7.1.13	Alkylation at Alkynyl Carbon	57
1.7.1.14	Alkylation of Cyanide Ion – Preparation of Nitriles	58
1.8	Nucleophilic Substitution at a Sulfonyl Sulfur Atom	60
1.8.1	Attack by Oxygen	60
1.8.1.1	Hydrolysis of Sulfonic Acid Derivatives	60
1.8.1.2	Formation of Sulfonate Esters	61
1.8.2	Attack by Nitrogen	61
1.8.2.1	Formation of Sulfonamides	61
1.8.3	Attack by Halogen	61
1.8.3.1	Formation of Sulfonyl Halides	61
1.8.4	Attack by Carbon	63
1.8.4.1	Preparation of Sulfones	63
2	Addition to Carbon-Heteroatom Multiple Bonds	65
	<i>Prantik Maity and Rajappa Vaidyanathan</i>	
2.1	Introduction	66
2.2	Addition of Water to Aldehydes and Ketones: Formation of Hydrates	66
2.3	Addition of Bisulfite to Aldehydes and Ketones	67
2.4	The Addition of Alcohols to Aldehydes and Ketones: Acetal Formation	69
2.5	The Addition of Thiols to Aldehydes and Ketones: S,S-Acetal Formation	71
2.6	Reductive Etherification	72
2.7	Addition of NH_3 , RNH_2 , and R_2NH	74
2.7.1	The Addition of Amines to Aldehydes and Ketones: Imine and Oxime Formation	74
2.7.2	Redox Neutral Amination	77
2.8	Formation of Hydrazones	79
2.9	Formation of Oximes	80
2.10	The Formation of gem-Dihalides from Aldehydes and Ketones	80
2.11	The Aldol Reaction	82
2.11.1	Ketene and Silyl Enol Ether Addition to Aldehydes	87
2.11.2	Silyl Enol Ether Addition to Aldehydes: The Mukaiyama Aldol	87
2.11.3	Ketene Silyl Acetal and Thioacetal Addition to Aldehydes	90
2.12	Allylorganometallics: Stannane, Borane, and Silane	92
2.12.1	Allylsilane Additions	92
2.12.2	Allylborane Additions	94
2.12.3	Allylstannane Additions	96
2.13	The Nozaki–Hiyama–Kishi Reaction	97
2.14	Addition of Transition Metal Alkynylides to Carbonyl Compounds	99
2.15	Addition of Organometallic Reagents to Carbonyls	100
2.15.1	Using Organolithium Reagents	100
2.15.2	Using Organomagnesium Reagents	102
2.16	Addition of Conjugated Alkenes to Aldehydes: the Baylis–Hillman Reaction	103
2.17	The Reformatsky Reaction	104
2.18	The Wittig Reaction	106
2.19	Horner–Wadsworth–Emmons Reaction	108
2.20	Peterson Olefination	109
2.21	Julia–Lythgoe Olefination	110
2.22	Tebbe Methylenation	112
2.23	The Mannich Reaction	113

2.24	The Strecker Reaction	115
2.25	Hydrolysis of Carbon–Nitrogen Double Bonds	117
2.26	Conversion of Carboxylic Acids to Acyl Chlorides	118
2.26.1	Procedures Using Oxalyl Chloride in the Absence of DMF	119
2.26.2	Procedures Using Thionyl Chloride in the Absence of DMF	119
2.26.3	Procedures Using a Halogenating Agent and DMF	120
2.26.4	Procedures Using Vilsmeier Reagent	122
2.27	Synthesis of Acyl Fluorides from Carboxylic Acids	122
2.28	Formation of Amides from Carboxylic Acids	123
2.28.1	Direct Coupling of Carboxylic Acids and Amines	123
2.28.2	Via Acid Chlorides	126
2.28.3	Via Acyl Imidazoles (Imidazolides)	126
2.28.4	Via Acyl Imidazolium Ions	127
2.28.5	Via Anhydrides	128
2.29	Formation of Amides from Esters	130
2.30	Hydrolysis of Acyl Halides	132
2.31	Conversion of Carboxylic Acids to Esters	132
2.31.1	Fisher Esterification	132
2.31.2	Widmer's Method for the Synthesis of t-Butyl Esters	133
2.31.3	Via Acid Chlorides	133
2.31.4	Via Acyl Imidazoles (Imidazolides)	133
2.31.5	Using Carbodiimides	134
2.31.6	Via Anhydrides	134
2.31.7	Miscellaneous Methods	136
2.32	Hydrolysis of Amides	136
2.32.1	Under Acidic Conditions	136
2.32.2	Under Basic Conditions	137
2.32.3	Under Oxidative Conditions	137
2.32.4	Miscellaneous Methods	138
2.33	Conversion of N-Acyloxazolidinones to Other Carboxyl Derivatives	139
2.34	Alcoholysis of Amides	140
2.35	Hydrolysis of Esters	141
2.35.1	Under Basic Conditions	141
2.35.2	Under Acidic Conditions	142
2.35.3	Miscellaneous Methods	143
2.36	Transesterification	143
2.37	Alkyl Thiol Addition to Esters	144
2.38	Addition of Organometallic Reagents to Carboxylic Acid Derivatives	145
2.39	The Kulinkovich Cyclopropanation	149
2.40	Synthesis of Acyl Cyanides	150
2.40.1	Using Trimethylsilyl Cyanide	150
2.40.2	Using Copper (I) Cyanide	150
2.40.3	Miscellaneous Methods	151
2.41	The Ritter Reaction	151
2.42	Thorpe Reaction	154
2.43	Addition of Organometallic Reagents to Nitriles	155
2.44	Conversion of Nitriles to Amides, Esters, and Carboxylic Acids	155
2.44.1	Hydrolysis of Nitriles Under Acidic Conditions	155
2.44.2	Hydrolysis of Nitriles Under Basic Conditions	157
2.44.3	Hydrolysis of Nitriles Under Oxidative Conditions	157
2.44.4	Enzymatic Hydrolysis of Nitriles	157
2.44.5	Miscellaneous	158
2.45	Conversion of Nitriles to Thioamides	158
2.45.1	Conversion of Nitriles to Aldehydes	159

2.46	The Addition of Ammonia or Amines to Nitriles	160
2.47	The Addition of Alcohol to Nitriles	161
2.48	Alkyl Thiol Addition to Nitriles	162
2.49	The Blaise Reaction	162
2.50	The Addition of Alcohols to Isocyanates	163
2.51	The Addition of Amines and Amides to Isocyanates	164
2.52	The Formation of Xanthates	165
2.53	The Addition of Amines to Carbon Dioxide	166
2.54	The Addition of Amines to Carbon Disulfide	167
2.55	Addition of Organometallic Reagents to Carbon Dioxide	167
3	Addition to Carbon–Carbon Multiple Bonds	169
	<i>John A. Ragan</i>	
3.1	Introduction	169
3.2	Hydrogen–Halogen Addition (Hydrohalogenation)	169
3.2.1	Hydrohalogenation of Olefins	169
3.2.2	Hydrohalogenation of Alkynes	172
3.3	Hydrogen–Oxygen Addition	173
3.3.1	Addition of H–OH (Hydration)	173
3.3.1.1	Hydration of Olefins	173
3.3.1.2	Hydration of Acetylenes	175
3.3.2	Addition of H–OR (Hydroalkoxylation)	176
3.3.2.1	Addition of H–OR to Olefins	176
3.3.2.2	Addition of H–OR to Acetylenes	177
3.4	Hydrogen–Nitrogen Addition (Hydroamination)	178
3.4.1	Hydroamination of Olefins	178
3.4.2	Hydroamination of Acetylenes and Allenes	179
3.5	Hydrogen–Carbon Addition (Hydroalkylation)	180
3.5.1	Direct Hydrogen–Alkyl Addition	180
3.5.2	Hydrogen–Allyl Addition (Alder Ene Reaction)	181
3.5.3	Hydrogen–Malonate/Enolate Addition (Michael Reaction)	182
3.5.4	Hydrogen–Alkyl Addition, Stork Enamine Reaction	184
3.5.5	Hydrogen–Alkyl Addition, Metal-Catalyzed	185
3.5.6	Hydroformylation/Hydroacylation	188
3.5.7	Nazarov Cyclization	190
3.5.8	Radical-Mediated C–H Addition	191
3.6	Halogen–Halogen Addition	191
3.7	Hydroxy–Halogen Addition	192
3.8	Amino–Halogen Addition	194
3.9	Carbon–Halogen Addition	194
3.9.1	Alkyl–Halogen Addition	194
3.9.2	Acyl–Halogen Addition	195
3.10	Oxygen–Oxygen Addition	196
3.10.1	Dihydroxylation of Olefins	196
3.10.2	Keto-Hydroxylation of Olefins	197
3.10.3	Dihydroxylation of Acetylenes	198
3.10.4	Epoxidation	198
3.10.5	Singlet Oxygen Addition to Dienes	202
3.11	Oxygen–Nitrogen Addition	202
3.12	Nitrogen–Nitrogen Addition	204
3.12.1	Aziridination	204
3.12.2	N–N Addition to Olefins	204
3.12.3	Triazines from Azide–Olefin Cycloaddition	205
3.12.4	N–N Addition to Dienes (1,4)	205

- 3.13 Carbon–Oxygen Addition 206
 - 3.13.1 Carbon–Oxygen Addition to Olefins (1,2) 206
 - 3.13.1.1 [2+2] Cycloadditions of Olefins and Carbonyl Compounds 206
 - 3.13.1.2 Nitron–Olefin [3+2] Cycloadditions 207
 - 3.13.1.3 Noncycloaddition Carbon–Oxygen Additions 209
 - 3.13.2 Carbon–Oxygen Addition to Dienes (1,4) 210
 - 3.13.2.1 Hetero Diels–Alder Cycloaddition 210
- 3.14 Carbon–Nitrogen Addition 211
 - 3.14.1 Carbon–Nitrogen Addition to Olefins 211
 - 3.14.2 Carbon–Nitrogen Addition to Alkynes 212
 - 3.14.3 Carbon–Nitrogen Addition to Dienes 212
- 3.15 Carbon–Carbon Addition 212
 - 3.15.1 [4+2] Cycloaddition: Diels–Alder Reaction 212
 - 3.15.1.1 Intermolecular, Nonsubstituted 212
 - 3.15.1.2 Intermolecular, Heteroatom-substituted Dienophile 213
 - 3.15.1.3 Intermolecular, Heteroatoms substituted Diene 213
 - 3.15.1.4 Intermolecular, Aqueous Media 214
 - 3.15.1.5 Intermolecular, Aromatic Product 214
 - 3.15.1.6 Intermolecular, Lewis Acid–Catalyzed 215
 - 3.15.1.7 Intermolecular, Inverse-electron Demand 216
 - 3.15.1.8 Intermolecular, Benzyne as Dienophile 217
 - 3.15.1.9 Intramolecular Examples 217
 - 3.15.1.10 Asymmetric Examples 218
 - 3.15.2 [2+2] Cycloaddition 219
 - 3.15.3 [3+2] Cycloaddition 221
 - 3.15.4 Carbene Addition (Cyclopropanation) 225
 - 3.15.5 [4+3] Cycloadditions 227
 - 3.15.6 Conjugate Addition–Alkylation 228
 - 3.15.7 Bis-Alkoxy carbonylation 229
 - 3.15.8 Cascade Cyclizations 229

4 Nucleophilic Aromatic Substitution 231

Stéphane Caron and Emma McInturff

- 4.1 Introduction 231
- 4.2 Oxygen Nucleophiles 232
 - 4.2.1 Preparation of Phenols 232
 - 4.2.2 Preparation of Aryl Ethers 232
 - 4.2.3 Preparation of Diaryl Ethers 234
- 4.3 Sulfur Nucleophiles 234
 - 4.3.1 Preparation of Aryl Thioethers 234
 - 4.3.2 Preparation of Diaryl Thioethers 235
 - 4.3.3 Other Sulfur Nucleophiles 236
- 4.4 Nitrogen Nucleophiles 236
 - 4.4.1 Preparation of Anilines 236
 - 4.4.2 Preparation of Aryl Amines 237
 - 4.4.3 Preparation of Diaryl Amines 238
 - 4.4.4 Other Nitrogen Nucleophiles 240
- 4.5 Halogen Nucleophiles 241
 - 4.5.1 Reaction of Diazonium Salts 241
 - 4.5.2 Preparation of 2-Halopyridines and Derivatives 242
- 4.6 Carbon Nucleophiles 243
 - 4.6.1 Cyanide as a Nucleophile 243
 - 4.6.2 Malonates as Nucleophiles 243
 - 4.6.3 Other Carbon Nucleophiles 244
- 4.7 ortho-Arynes 245

5	Electrophilic Aromatic Substitution	247
	<i>Stéphane Caron and Emma McInturff</i>	
5.1	Introduction	247
5.2	Nitrogen Electrophiles	247
5.2.1	Nitration	247
5.2.2	Nitrosation	249
5.2.3	Diazonium Coupling	250
5.3	Sulfur Electrophiles	250
5.3.1	Sulfonation	250
5.3.2	Halosulfonation	251
5.3.3	Sulfurization	251
5.3.4	Sulfinylation	252
5.3.5	Sulfonylation	252
5.3.6	Thiocyanation	252
5.4	Halogenation	253
5.4.1	Fluorination	253
5.4.2	Chlorination	253
5.4.3	Bromination	254
5.4.4	Iodination	255
5.5	Carbon Electrophiles	257
5.5.1	Friedel–Crafts Alkylation	257
5.5.2	Friedel–Crafts Arylation	259
5.5.3	Claisen Rearrangement	259
5.5.4	Formylation	260
5.5.5	Hydroxyalkylation	261
5.5.6	Haloalkylation	262
5.5.7	Aminoalkylation	262
5.5.8	Thioalkylation	263
5.5.9	Friedel–Crafts Acylation	263
5.5.10	Fries Rearrangement	265
5.5.11	Carboxylation	265
5.5.12	Amidation	266
5.5.13	Thioamidation and Thioesterification	266
5.5.14	Cyanation	267
6	Selected Catalytic Reactions	269
	<i>Sebastien Monfette, Adam R. Brown, Pascal Dubé, Nathan D. Ide, Chad A. Lewis, Jared L. Piper, Shashank Shekhar, and Shu Yu</i>	
6.1	Introduction	269
6.2	Organoboron Reagents: The Suzuki–Miyaura Coupling	270
6.2.1	Preparation of Biaryls	271
6.2.2	Preparation of Alkynyl-Substituted Arenes	278
6.2.3	Preparation of Vinyl-Substituted Arenes	279
6.2.4	Preparation of Dienes	280
6.2.5	Preparation of Alkyl-Substituted Arenes	280
6.2.6	Preparation of Alkyl-Substituted Alkenes	281
6.2.7	Preparation of Alkanes	282
6.3	Organomagnesium Reagents: Kumada–Corriu Coupling	282
6.3.1	Preparation of Biaryls	283
6.3.2	Preparation of Vinyl-Substituted Arenes	283
6.3.3	Preparation of Aryl–Alkyl Bonds	285
6.3.4	Preparation of Vinyl–Alkyl Bonds	286
6.4	Organozinc Reagents: Negishi Coupling	287
6.4.1	Preparation of Biaryls	287
6.4.2	Preparation of Aryl–Alkyl Bonds	289

6.4.3	Preparation of Alkanes	290
6.4.4	Preparation of 1,3-Dienes	290
6.4.5	Preparation of Ketones	291
6.5	Cross-Electrophile Coupling	291
6.6	Organotin Reagents: The Stille Coupling (Migita-Stille Reaction)	292
6.6.1	Preparation of Biaryls	292
6.6.2	Preparation of Vinyl-Substituted Arenes	293
6.6.3	Preparation of 1,3-Dienes	294
6.6.4	Preparation of Alkyl-Substituted Alkenes	295
6.7	Cross-Coupling Reactions with Organosilicon Compounds	295
6.8	Metal-catalyzed Coupling of Alkynes (Sonogashira Coupling)	296
6.8.1	Reaction with Aryl Halides	296
6.8.2	Preparation of Enynes	298
6.9	Metal-Catalyzed Coupling of Alkenes (Heck Coupling)	298
6.9.1	Formation of Aryl Alkenes	299
6.9.2	Formation of Dienes	301
6.9.3	Reductive Heck	302
6.9.4	Oxidative Heck	303
6.10	Enolate Arylations	303
6.10.1	α -Arylation of Ketones	304
6.10.2	α -Arylation of Esters	304
6.10.3	α -Arylation of Amides	305
6.10.4	α -Arylation of Nitrile	305
6.11	Pd- and Cu-Catalyzed Aryl C—N Bond Formation	306
6.11.1	Alkyl Amine as Nucleophile	307
6.11.2	Aryl Amine as Nucleophile	311
6.11.3	Amides as Nucleophile	312
6.11.4	Other Amine as Nucleophile	314
6.11.5	Coupling with Ammonia Surrogate	316
6.11.6	Oxidative Coupling	318
6.12	Pd- and Cu-Catalyzed Aryl C—O Bond Formation	320
6.13	Pd- and Cu-Catalyzed Aryl C—S Bond Formation	322
6.14	Aryl C—B Bond Formation	324
6.14.1	Aryl Bromides and Iodides	324
6.14.2	Vinyl Bromide	326
6.14.3	Aryl Chlorides and Triflates	327
6.15	Pd-Catalyzed Aryl C—CN Bond Formation	327
6.16	Metal-Catalyzed Allylic Substitution	329
6.16.1	Carbon Nucleophiles	331
6.16.2	Nitrogen Nucleophiles	334
6.16.3	Oxygen Nucleophiles	335
6.17	Catalytic Metal-Mediated Methods for Fluorination	337
6.17.1	Aryl Fluorination	337
6.17.2	Vinyl Fluorides	339
6.17.3	α -Fluorination of Carbonyl Compounds	340
6.17.4	Difluoromethylation ($-\text{CF}_2\text{R}$)	342
6.17.5	Trifluoromethylation ($-\text{CF}_3$)	344
6.17.6	Emerging Methods for Metal-Catalyzed Fluorination	346
6.17.7	Summary and Outlook for Metal-Catalyzed Fluorination	347
6.18	Selected Metal-Mediated C—H Functionalization	347
6.18.1	Introduction	347
6.18.2	Metal-Catalyzed, Directed C—H Functionalization	348
6.18.2.1	Ru-Catalyzed Methods	348
6.18.2.2	Palladium-Catalyzed Methods	351

- 6.18.2.3 Rhodium-Catalyzed Methods 353
- 6.18.3 Metal-Catalyzed Undirected C—H Functionalization 353
 - 6.18.3.1 Formation of C—B Bonds 353
 - 6.18.3.2 Formation of C—Si Bonds 354
 - 6.18.3.3 Formation of C—C Bonds 355
- 6.19 C—X Bond Forming Reactions via Borrowed Hydrogen Methodologies 357
 - 6.19.1 Introduction 357
 - 6.19.2 C—C Bond formation 357
 - 6.19.2.1 Allylation/Crotylation 357
 - 6.19.2.2 Alkylation of Aromatics 358
 - 6.19.3 Redox Neutral Homologation of Alcohols 359
 - 6.19.4 Ketone Functionalization 359
 - 6.19.5 C—N Bond Formation 360
 - 6.19.5.1 Primary Amines 360
 - 6.19.5.2 Secondary Amines 360
 - 6.19.5.3 Tertiary Amines 361
- 6.20 Alkene and Alkyne Metathesis Reactions 362
 - 6.20.1 Introduction 362
 - 6.20.2 Ring-closing Metathesis 363
 - 6.20.2.1 Alkene Ring-Closing Metathesis 363
 - 6.20.2.2 Alkyne Ring-Closing Metathesis 364
 - 6.20.2.3 Enyne Ring-closing Metathesis 366
 - 6.20.2.4 Z-Selective Olefin Metathesis 366
 - 6.20.3 Cross-Metathesis 367
 - 6.20.3.1 Alkene Cross-Metathesis 367
 - 6.20.3.2 Alkane Cross-Metathesis 368
 - 6.20.3.3 Alkyne Cross-Metathesis 368
 - 6.20.4 Metathesis Polymerization 369
- 6.21 Organocatalysis 369
 - 6.21.1 Introduction 369
 - 6.21.2 Phase Transfer Catalysis 369
 - 6.21.2.1 Carbon Alkylation 369
 - 6.21.2.2 Heteroatom Alkylation 370
 - 6.21.2.3 Conjugate Additions of Carbon Nucleophiles 371
 - 6.21.2.4 Addition of Heteroatom Nucleophiles 372
 - 6.21.3 Amino Organocatalysis via Iminium and Enamine Intermediates 372
 - 6.21.3.1 Iminium Catalysis: Conjugate Addition 372
 - 6.21.3.2 Iminium Catalysis: Cycloadditions 373
 - 6.21.3.3 Enamine Catalysis: Aldol/Mannich 373
 - 6.21.4 Nucleophilic Catalysis 373
 - 6.21.4.1 Acyl Transfer Reactions 374
 - 6.21.4.2 Reactions Proceeding via Acyl Anion Equivalents 374
 - 6.21.4.3 Morita–Baylis–Hillman Reactions 375
- 7 Rearrangements 377**
David H. Brown Ripin and Chad A. Lewis
 - 7.1 Introduction 377
 - 7.2 [1,2]-Rearrangements 377
 - 7.2.1 Carbon-to-Carbon Migrations of Carbon and Hydrogen 377
 - 7.2.1.1 Wagner–Meerwein and Related Reactions 377
 - 7.2.1.2 Pinacol Rearrangement: Vicinal Diols to Ketones or Aldehydes 378
 - 7.2.1.3 Expansion and Contraction of Rings 380
 - 7.2.1.4 Rearrangements of Ketones and Aldehydes 381
 - 7.2.1.5 Dienone to Phenol Rearrangement 381

- 7.2.1.6 Benzil to Benzilic Acid Rearrangement 382
- 7.2.1.7 Favorskii Rearrangement: Anionic Rearrangement of α -Haloketones 382
- 7.2.1.8 Arndt–Eistert Synthesis: Homologation of Carboxylic Acids via Wolff Rearrangement of α -Diazoketones 384
- 7.2.1.9 Homologation of Aldehydes and Ketones 384
- 7.2.1.10 Fritsch–Buttenberg–Wiechell Rearrangement: Acetylenes from 1,1-Disubstituted Olefins 385
- 7.2.1.11 Other Carbon-to-Carbon Migrations of Carbon 386
- 7.2.1.12 Other Carbon-to-Carbon Migrations of Hydrogen 387
- 7.2.2 Carbon-to-Carbon Migrations of Other Groups 387
- 7.2.2.1 Migration of Halogen, Hydroxy, Amino, and Other Groups 387
- 7.2.2.2 Neber Rearrangement: Carbon-to-Carbon Migration of Nitrogen of Activated Oximes 388
- 7.2.2.3 Payne Rearrangement: Rearrangement of α -Hydroxyepoxides 389
- 7.2.3 Carbon-to-Nitrogen Migrations of Carbon 390
- 7.2.3.1 Hofmann Rearrangement: Primary Amides to Amines or Carbamates 390
- 7.2.3.2 Curtius Rearrangement: Acyl Azides to Amines or Carbamates 391
- 7.2.3.3 Lossen Rearrangement: Hydroxamic Imides to Amines or Carbamates 392
- 7.2.3.4 Schmidt Rearrangement: Ketones to Amides 395
- 7.2.3.5 Beckmann Rearrangement: Oximes to Amides 395
- 7.2.3.6 Stieglitz Rearrangements and Related Reactions: Cationic C to N Migration of Carbon 396
- 7.2.4 Carbon to Oxygen Migrations of Carbon 397
- 7.2.4.1 Baeyer–Villiger Oxidation: Ketones or Aldehydes to Esters 397
- 7.2.5 Heteroatom to Carbon Migrations 398
- 7.2.5.1 Stevens Rearrangement – [1,2]-Rearrangement of N, O, or S Ylides with Migration of Carbon 398
- 7.2.5.2 [1,2]-Meisenheimer Rearrangement – Rearrangement of R_3NO to R_2NOR 400
- 7.2.5.3 Other Heteroatom to Carbon Rearrangements 400
- 7.2.6 Carbon to Heteroatom Rearrangements 402
- 7.2.6.1 Brook Rearrangement, Carbon-to-Oxygen Migration of Silicon 402
- 7.3 Other Rearrangements 402
- 7.3.1 Electrocyclic Rearrangements 402
- 7.3.1.1 Rearrangements of Cyclobutenes and 1,3-Cyclohexadienes 402
- 7.3.1.2 Stilbenes to Phenanthrenes 403
- 7.3.2 Sigmatropic Rearrangements 403
- 7.3.2.1 Cyclopropylimine Rearrangement 403
- 7.3.2.2 Cyclopropanes to Allenes: The Skattebøl and Related Rearrangements 404
- 7.3.2.3 Cope Rearrangement 405
- 7.3.2.4 Claisen Rearrangement 406
- 7.3.2.5 Fischer Indole Synthesis 411
- 7.3.2.6 Boekelheide Rearrangement: 2-Alkylpyridine *N*-Oxide Rearrangements 412
- 7.3.2.7 [2,3]-Wittig Rearrangement: O-to-C Shift of Carbon 412
- 7.3.2.8 [2,3]-Meisenheimer Rearrangement: N-to-O Migration of Carbon in Tertiary *N*-Oxides 413
- 7.3.2.9 [2,3]-Sulfoxide, Selenoxide, and Sulfilimine Rearrangements 414
- 7.3.2.10 Sommelet–Hauser Rearrangement and Related Reactions – [2,3]-Sigmatropic Rearrangements of Ylides 415
- 7.3.2.11 Benzidine Rearrangement 415
- 7.3.2.12 Overman Rearrangement 416
- 7.3.2.13 Propargyl O-to-N Migration 416
- 7.3.3 Other Cyclic Rearrangements 417
- 7.3.3.1 Di- π -Methane and Related Rearrangements 417
- 7.3.4 Acyclic Rearrangements 417
- 7.3.4.1 Migration of Double Bonds 417
- 7.3.4.2 Hydride Shifts 418
- 7.3.4.3 Newman–Kwart Rearrangement – *O*-phenylthiocarbonate to *S*-phenylcarbamate 419
- 7.3.4.4 Nitrosamide Decomposition 419
- 7.3.4.5 The Achmatowitz Reaction: Oxidative Furan Rearrangement 420

- 7.4 Miscellaneous Migrations 420
 - 7.4.1 Hunsdiecker 420
 - 7.4.2 Jovic 420
 - 7.4.3 Smiles/Truce–Smiles 421
 - 7.4.4 Dakin–West–Dimroth 422
 - 7.4.5 Meinwald 423

- 8 Eliminations 425**
 - Sally Gut Ruggeri*
 - 8.1 Introduction 425
 - 8.2 Formation of Alkenes 425
 - 8.2.1 Elimination of Alcohols 426
 - 8.2.2 Elimination of Ethers 426
 - 8.2.3 Elimination of Esters 427
 - 8.2.4 Elimination of Xanthates 428
 - 8.2.5 Elimination of Ammonium or Sulfonium Salts 428
 - 8.2.6 Elimination of *N*-Oxides 429
 - 8.2.7 Elimination of Diazonium Salts 429
 - 8.2.8 Elimination of Hydrazones 429
 - 8.2.9 Elimination of Sulfoxides and Selenoxides 430
 - 8.2.10 Elimination of Halides 431
 - 8.2.11 Elimination of Nitriles 431
 - 8.2.12 Elimination β to an Electron-withdrawing Group 432
 - 8.2.13 Elimination of Diol Derivatives 432
 - 8.2.14 Elimination of Epoxides and Episulfides 434
 - 8.2.15 Elimination of α -Halo Sulfones 435
 - 8.2.16 Elimination of Aziridines 435
 - 8.2.17 Elimination of Dihalides 436
 - 8.2.18 Elimination of Haloethers 436
 - 8.2.19 Elimination of Hydroxy- or Haloacids 437
 - 8.2.20 Elimination of Hydroxysulfones 437
 - 8.2.21 Elimination of β -Silyl Alcohols 438
 - 8.2.22 Elimination of β -Silyl Esters, Sulfides, and Sulfones 438
 - 8.3 Formation of Dienes 438
 - 8.3.1 From Allylic Systems 439
 - 8.3.2 From 1,4-Dihalo-2-butenes 440
 - 8.3.3 From Diols 440
 - 8.3.4 From δ -Elimination 440
 - 8.3.5 From Sulfolenes 441
 - 8.3.6 Via Retro Diels–Alder Reactions 441
 - 8.3.7 From Extrusion of CO 442
 - 8.4 Formation of Alkynes 442
 - 8.4.1 From Ketones 442
 - 8.4.2 From Bis(hydrazones) 443
 - 8.4.3 From Dihalides 443
 - 8.4.4 From Vinyl Halides 443
 - 8.4.5 From Elimination of Sulfones 444
 - 8.5 Formation of C=N bonds 444
 - 8.5.1 Carbodiimides from Ureas 445
 - 8.6 Formation of Nitriles 445
 - 8.6.1 Nitriles from Amides 445
 - 8.6.2 Nitriles from Cleavage of N–O Bonds 446
 - 8.6.3 Isonitriles from Formamides 447
 - 8.7 Formation of Ketenes and Related Compounds 447

- 8.7.1 Ketenes 447
- 8.7.2 Isocyanates and Isothiocyanates 448
- 8.7.3 Ketimines 448
- 8.8 Fragmentations 449
 - 8.8.1 Grob Fragmentations 449
 - 8.8.2 Eschenmoser Fragmentations 450
 - 8.8.3 Formation of Arenes 450
 - 8.8.4 Extrusion of N₂ 450
 - 8.8.5 Extrusion of S 451
 - 8.8.6 Multicomponent Extrusions 451
- 8.9 Dehydrating Reagents 451

- 9 Reductions 455**
Sally Gut Ruggeri, Stéphane Caron, Pascal Dubé, Nathan D. Ide, Kristin E. Price Wiglesworth, John A. Ragan, and Shu Yu
- 9.1 Introduction 455
- 9.2 Reduction of C—C Bonds 455
 - 9.2.1 Reduction of Alkynes 455
 - 9.2.1.1 Reduction of Alkynes to Alkenes 455
 - 9.2.1.2 Reduction of Alkynes to Alkanes 456
 - 9.2.2 Reduction of Alkenes 457
 - 9.2.2.1 Reduction of Alkenes to Alkanes Without Facial Selectivity 457
 - 9.2.2.2 Reduction of Alkenes to Alkanes with Facial Selectivity 458
 - 9.2.3 Reduction of Aromatic Rings and Heterocycles 461
 - 9.2.3.1 Reduction of Benzene and Naphthalene Rings 461
 - 9.2.3.2 Reduction of Pyridines and Quinolines 462
 - 9.2.3.3 Reduction of Pyrroles and Indoles 464
 - 9.2.3.4 Reduction of Furans 464
 - 9.2.4 Conjugate Reductions 465
 - 9.2.4.1 Reduction of Conjugated Alkynes 465
 - 9.2.4.2 Reduction of α,β -Unsaturated Acids and Derivatives 466
 - 9.2.4.3 Reduction of Enones 469
- 9.3 Reduction of C—N Bonds 471
 - 9.3.1 Reduction of Nitriles to Imines or Aldehydes 471
 - 9.3.2 Reduction of Nitriles to Primary Amines 471
 - 9.3.3 Reduction of Imines or Imine Derivatives 472
 - 9.3.3.1 Achiral Reductions 472
 - 9.3.3.2 Substrate Control in Stereoselective Reductions 473
 - 9.3.3.3 Enantioselective Reductions 474
 - 9.3.4 Reduction of Hydrazones to Alkanes 477
 - 9.3.5 Reduction of Carbon–Nitrogen Single Bonds 477
 - 9.3.5.1 Reduction of Benzylic Amines 477
 - 9.3.5.2 Reduction of Aromatic Carbon–Nitrogen Single Bonds 478
 - 9.3.5.3 Reduction of Aliphatic Nitro Groups 479
- 9.4 Reduction of C—O Bonds 479
 - 9.4.1 Reduction of Carboxylic Acid Derivatives 479
 - 9.4.1.1 Reduction of Esters to Aldehydes 479
 - 9.4.1.2 Reduction of Esters to Primary Alcohols 480
 - 9.4.1.3 Reduction of Carboxylic Acids to Primary Alcohols 481
 - 9.4.1.4 Reduction of Anhydrides and Mixed Anhydrides to Aldehydes 481
 - 9.4.1.5 Reduction of Anhydrides and Mixed Anhydrides to Primary Alcohols 481
 - 9.4.1.6 Reduction of Amides and Imides to Aldehydes 482
 - 9.4.1.7 Reduction of Amides to Alkylamines 484
 - 9.4.1.8 Reduction of Carbamates to *N*-Methylamines 484
 - 9.4.2 Reduction of Aldehydes and Ketones to Alcohols 485

- 9.4.2.1 Reduction with Hydride Donors 485
- 9.4.2.2 Meerwein–Ponndorf–Verley Reaction 488
- 9.4.2.3 Reduction via Catalytic Hydrogenation 489
- 9.4.2.4 Biocatalytic Routes to Reduction of Aldehydes and Ketones 490
- 9.4.2.5 Aldol–Tishchenko Reaction 490
- 9.4.2.6 Reduction of Acetals and Ketals 491
- 9.4.3 Reduction of Ketones to Alkanes 492
- 9.4.3.1 Wolff–Kishner Reduction 492
- 9.4.3.2 Clemmensen Reduction 492
- 9.4.3.3 Silane-Mediated Reduction 492
- 9.4.4 Reduction of Alcohols to Alkanes 492
- 9.4.4.1 Reduction of Aliphatic Alcohols 492
- 9.4.4.2 Reduction of Benzylic Alcohols 493
- 9.4.4.3 Reduction of Benzylic Ethers 493
- 9.5 Reduction of C–S Bonds 494
- 9.5.1 Reduction of Alkyl Sulfides, Sulfoxides, and Sulfones 494
- 9.5.2 Reduction of Vinyl Sulfides, Sulfoxides, and Sulfones 496
- 9.5.3 Reduction of Aryl Sulfides, Sulfoxides, and Sulfones 497
- 9.5.4 Reduction of Thioketones 498
- 9.5.5 Reduction of Thioesters and Thioamides 498
- 9.5.6 Reduction of Miscellaneous Thiocarbonyls 499
- 9.6 Reduction of C–X Bonds 500
- 9.6.1 Alkyl Halide Reductions 500
- 9.6.2 Acid Halides to Aldehydes 502
- 9.6.3 Vinyl Halide Reductions 503
- 9.6.4 Aryl Halide Reductions 503
- 9.7 Reduction of Heteroatom–Heteroatom Bonds 504
- 9.7.1 Reduction of Nitrogen–Nitrogen Bonds 504
- 9.7.1.1 Reduction of Azides 505
- 9.7.2 Reduction of Nitrogen–Oxygen Bonds 505
- 9.7.2.1 Reduction of Nitro Groups to Amines 506
- 9.7.2.2 Partial Reduction of Aromatic Nitro Compounds 507
- 9.7.2.3 Partial Reduction of Aliphatic Nitro Compounds 507
- 9.7.3 Reduction of Oxygen–Oxygen Bonds 508
- 9.7.3.1 Reduction of Peroxides 508
- 9.7.3.2 Reduction of Ozonides 508
- 9.7.4 Reduction of Oxygen–Sulfur Bonds 509
- 9.7.4.1 Reduction of Sulfones to Sulfides 509
- 9.7.4.2 Reduction of Sulfoxides to Sulfides 510
- 9.7.5 Reduction of Disulfides to Thiols 510
- 9.7.6 Reduction of Phosphine Oxides to Phosphines 511
- 10 Oxidations 513**
Eric C. Hansen, Robert Perkins, and David H. Brown Ripin
- 10.1 Introduction 513
- 10.2 Oxidation of C–C Single and Double Bonds 514
- 10.2.1 Oxidative Cleavage of Glycols β -Aminoalcohols, α -Hydroxyaldehydes and Ketones, and Related Compounds 514
- 10.2.2 Ozonolysis 515
- 10.2.2.1 Ozonolysis Followed by Reduction to the Alcohol 515
- 10.2.2.2 Ozonolysis to the Ketone or Aldehyde Oxidation State 515
- 10.2.2.3 Ozonolysis Resulting in Carboxylic Acids or Esters 516
- 10.2.2.4 Ozonolysis Followed by Criegee Rearrangement 517
- 10.2.3 Oxidative Cleavage of Double Bonds and Aromatic Rings 517

10.2.4	Oxidative Cleavage of Alkyl Groups from Rings	518
10.2.5	Oxidative Decarboxylation	518
10.2.6	Oxidative Decyanation	519
10.2.7	Oxidation of Olefins to Aldehydes and Ketones	520
10.3	Oxidation of C—H Bonds	520
10.3.1	Aromatization of Six-Membered Rings	520
10.3.2	Dehydrogenations Yielding Carbon–Carbon Bonds	521
10.3.3	Halogenation α to a Ketone or Aldehyde, or Carboxylic Acid	522
10.3.3.1	Chlorination	522
10.3.3.2	Bromination	523
10.3.3.3	Iodination	525
10.3.3.4	Fluorination	525
10.3.3.5	Haloform Reaction	526
10.3.3.6	Cleavage of Ketones with MNH_2	527
10.3.4	Oxygenation α to a Ketone, Aldehyde, or Carboxylic Acid	527
10.3.5	Introduction of Nitrogen α to a Ketone, Aldehyde, or Carboxylic Acid	528
10.3.5.1	Aliphatic Diazonium Coupling	528
10.3.5.2	Nitrosation of Activated Carbon–Hydrogen Bonds	529
10.3.5.3	Formation of Diazo Compounds	529
10.3.5.4	Amination α to a Carbonyl	530
10.3.6	Sulfenation and Selenylation of Ketones, Aldehydes, and Esters	531
10.3.7	Sulfonylation of Aldehydes, Ketones, and Acids	531
10.3.8	Allylic and Benzylic Halogenation	532
10.3.8.1	Oxygenations	533
10.3.8.2	Allylic Amination	534
10.3.9	Nitrene Insertion into Carbon–Hydrogen Bonds	535
10.4	Oxidation of Carbon–Oxygen Bonds and at Carbon Bearing an Oxygen Substituent	536
10.4.1	Oxidation of Alcohols to Aldehydes and Ketones	536
10.4.1.1	TEMPO-Mediated Processes	537
10.4.1.2	Moffatt and Modified-Moffatt Processes	537
10.4.1.3	Metal-Mediated Processes	539
10.4.1.4	Alternative Methods	541
10.4.1.5	Oxidation of Benzylic and Allylic Alcohols	541
10.4.1.6	Oxidation of Diols to Lactones, Selective Oxidation of Primary or Secondary Alcohols	542
10.4.2	Oxidation of Primary Alcohols to Carboxylic Acids	542
10.4.2.1	TEMPO/Sodium Chlorite Oxidation of Alcohols to Carboxylic Acids and Derivatives	542
10.4.2.2	Metal-Mediated Oxidation of Alcohols to Carboxylic Acids and Derivatives	543
10.5	Oxidation of Aldehydes to Carboxylic Acids and Derivatives	543
10.5.1	Sodium Chlorite Oxidation of Aldehydes to Carboxylic Acids and Derivatives	543
10.5.1.1	Hydrogen Peroxide Oxidation of Aldehydes to Carboxylic Acids and Derivatives	543
10.5.1.2	Metal-Mediated Oxidations of Aldehydes to Carboxylic Acids and Derivatives	543
10.5.1.3	Oxidation of Bisulfite Adducts	544
10.5.2	Oxidation of Carboxylic Acids to Peroxyacids	544
10.5.3	Oxidation of Phenols and Anilines to Quinones	544
10.5.4	Oxidation α to Oxygen and Nitrogen	545
10.6	Oxidation of Carbon–Nitrogen Bonds and at Carbon Bearing a Nitrogen Substituent	546
10.6.1	Dehydrogenation of Amines to Imines and Nitriles	546
10.6.1.1	Oxidation α to Nitrogen	546
10.6.1.2	Oxidation of Aldoximes and Hydrazones of Aldehydes	548
10.7	Oxidation of Nitrogen Functionalities	548
10.7.1	Diazotization of Amines	548
10.7.2	Oxidations of Hydrazines and Hydrazones	549
10.7.3	Amination of Nitrogen	550
10.7.4	Oxidation of Amines to Azo or Azoxy Compounds	551

- 10.7.5 Oxidation of Primary Amines to Hydroxylamines 551
- 10.7.6 Oxidation of Nitrogen to Nitroso Compounds 551
- 10.7.6.1 Nitron Formation 552
- 10.7.6.2 Oxidation of Hydroxylamine to Nitroso Compounds 552
- 10.7.7 Nitrosation of Secondary Amines and Amides 553
- 10.7.8 Oxidation of Primary Amines, Oximes, or Nitroso Compounds to Nitro Compounds 553
- 10.7.9 Oxidation of Tertiary Amines to Amine Oxides and Elimination to Form Imines 553
- 10.7.10 Oxidation of Pyridines to Pyridine *N*-Oxides 554
- 10.7.11 Halogenation or Sulfination of Amines and Amides 554
- 10.8 Oxidation of Sulfur and at Carbon Adjacent to Sulfur 555
- 10.8.1 Pummerer Rearrangement 555
- 10.8.2 Formation of α -Halosulfides 556
- 10.8.3 Halogenation of Sulfoxides, Sulfones, and Phosphine Oxides 556
- 10.8.4 Oxidation of Mercaptans and Other Sulfur Compounds to Sulfonic Acids or Sulfonyl Chlorides 557
- 10.8.4.1 Peroxide-Based Oxidations 557
- 10.8.4.2 Chlorine Oxidations 557
- 10.8.5 Oxidation of Sulfides to Sulfoxides and Sulfones 557
- 10.8.5.1 Oxidation of a Sulfide to a Sulfoxide 557
- 10.8.5.2 Oxidation of a Sulfide to a Sulfone 559
- 10.8.5.3 Oxidation of Selenides 560
- 10.8.6 Oxidation of Mercaptans to Disulfides 561
- 10.9 Oxidation of Other Functionality 561
- 10.9.1 Oxidation of Primary Halides 561
- 10.9.2 Oxidation of C—Si Bonds: The Tamao Oxidation 562

- 11 Selected Free Radical Reactions 563**
Christophe Allais, Eric C. Hansen, Nathan D. Ide, Robert J. Perkins, and Elizabeth C. Swift
- 11.1 Introduction 563
- 11.1.1 Radical Reactions Discussed in Other Chapters 563
- 11.2 Radical Reactions via Chemical Initiation 563
- 11.2.1 Radical Cyclizations 563
- 11.2.2 Atom Transfer Radical Cyclizations 564
- 11.2.3 Radical Allylation 564
- 11.2.3.1 Keck Radical Allylation 564
- 11.2.3.2 Tin-Free Radical Allylations 565
