Preface.....	xi
--------------	----

## SECTION I Basic Polaron Concepts

---

1 Qualitative Picture	
1.1 Introduction .....	3
1.2 What is a Polaron? .....	3
1.3 Simple Classical Landau Picture .....	4
1.4 A More Detailed Qualitative Analysis of Landau Picture: The Classical Picture .....	5
1.5 Dynamical Regime: The Quantum Picture.....	6
1.6 Polaron Motion in a Molecular Lattice: Mott-Austin Picture.....	8

## SECTION II Continuum Polarons

---

2 The Fröhlich Hamiltonian	
2.1 Introduction .....	13
2.2 Derivation of the Fröhlich Hamiltonian.....	13
3 Exactly Soluble Polaron Models	
3.1 Introduction .....	23
3.2 A Localized Electron Interacting with Optical Phonons.....	23
3.3 The Gross Model: An Electron Interacting with a Single Phonon Mode .....	25
4 Weak and Intermediate Coupling Solutions of the Fröhlich Hamiltonian	
4.1 Introduction .....	31
4.2 Rayleigh-Schödinger Perturbation Theory.....	31
4.2.1 Unperturbed State and Translational Invariance of the System.....	31
4.2.2 Perturbed Wave Function .....	34
4.2.3 Perturbed Energy .....	36
4.2.4 Polaron Effective Mass.....	38
4.2.5 Average Number of Virtual Phonons.....	39
4.2.6 Electron Life-Time .....	41
4.2.7 Lattice Polarization Potential .....	44
4.2.8 Validity of the RSPT Solutions.....	45

4.3	Brillouin-Wigner Perturbation Theory.....	46
4.3.1	An Introduction to Brillouin-Wigner Perturbation Theory .....	46
4.3.2	Application of Second-Order Brillouin-Wigner Perturbation Theory to the Polaron Problem .....	47
4.4	The Variational Theory of Gurari .....	50
4.4.1	The Wave Function.....	50
4.4.2	Polaron Energy and Effective Mass.....	51
4.4.3	Average Number of Virtual Phonons.....	56
4.4.4	Polaron Polarization Potential .....	57
4.5	Canonical Transformation Method of Lee, Low, and Pines.....	58
4.5.1	Introduction .....	58
4.5.2	Polaron Energy and Effective Mass .....	58
4.5.3	Number of Virtual Phonons in the Polaron Cloud.....	64
4.5.4	Polarization Potential and Induced Polarization Charge Density .....	64
4.5.5	Correspondence with Lee-Pines Approximation.....	66
4.6	Improvements on the Lee, Low, and Pines Theory .....	67
4.6.1	Introduction .....	67
4.6.2	Lowest-Order Perturbative Correction to the Results from Lee, Low, and Pines.....	67
4.6.3	Another Perturbative Extension of the Lee, Low, and Pines Theory: The Haga Method .....	68
4.6.4	One-Phonon Tamm-Dancoff Variational Theory: The Haga Method.....	72
4.6.5	One-Phonon TD Variational Theory Again: The Polaron Dispersion Analysis by Larsen.....	76
4.7	Other Theories .....	80
4.8	Lower Bounds to the Polaron Ground State Energy.....	82
4.8.1	The Method of Lieb and Yamazaki.....	82
4.8.2	The Method of Larsen.....	87
<b>5</b>	<b>Strong-Coupling Solutions of the Fröhlich Hamiltonian</b>	
5.1	Introduction .....	91
5.2	The Landau-Pekar Method .....	91
5.3	Fully Quantum Mechanical Approach to the Landau-Pekar Method.....	99
5.4	Exact Landau-Pekar Numerical Solution .....	103
5.5	Strong-Coupling Expansion (Adiabatic Solution) .....	105
<b>6</b>	<b>Attempts at All-Coupling Solutions of the Fröhlich Hamiltonian</b>	
6.1	Introduction .....	115
6.2	The Method of Höhler.....	115
6.3	The Lee-Low-Pines-Huybrechts Method.....	116
6.3.1	Weak-Coupling Limit.....	120
6.3.2	Strong-Coupling Limit .....	121
6.4	The Lee-Low-Pines-Gross Method .....	122
<b>7</b>	<b>Path-Integral Solutions of the Fröhlich Hamiltonian</b>	
7.1	Introduction .....	127
7.2	The Feynman Path-Integral Method.....	127
7.2.1	The Transformation Function and the Path-Integral.....	127
7.2.2	Evaluation of Path-Integral of Simple Systems.....	130
7.2.2.1	Free Particle.....	130
7.2.2.2	Particle with Gaussian Action.....	131

7.3	Application of Feynman's Path-Integral Method to the Polaron Problem .....	136
7.3.1	Ground State Energy.....	136
7.3.1.1	Feynman's Variational Principle.....	138
7.3.1.2	Feynman's Prescription for the Trial Action .....	140
7.3.1.3	Fixed Harmonic Oscillator Approximation.....	146
7.3.1.4	The Feynman Polaron Model ( $w \neq 0$ ).....	148
7.3.2	Effective Mass.....	149
7.4	Other Works.....	152
7.4.1	Schultz's Analysis .....	152
7.3.2	Higher-Order Approximation by Marshall and Mills .....	153
<b>8</b>	<b>Green's Function Theories for the Fröhlich Polaron</b>	
8.1	Introduction .....	159
8.2	Electrons and Phonon Propagators .....	159
8.2.1	One-Electron Green Function.....	159
8.2.2	The Phonon Propagator .....	161
8.2.3	Energy of an Excitation .....	163
8.3	The Diagrammatic Green Function Formalism for the Polaron Problem .....	164
8.4	Equation of Motion Method.....	173
8.4.1	Non-Interacting Case .....	178
8.4.2	Tamm-Dancoff One-Quantum Approximation .....	179
8.4.3	Hartree-Fock Approximation .....	179
8.5	Dynamical Theory of Polaron: Non-Diagonal Green's Function Approach of Matz and Burkey.....	180
8.5.1	Equation of Motion.....	180
8.5.2	The Wave Function.....	183
8.5.3	Ground State Energy.....	185
8.5.3.1	Weak-Coupling Limit.....	187
8.5.3.2	Strong-Coupling Limit .....	188
8.5.4	Strong-Coupling Wave Function and Connection with Pekar's Theory.....	189
8.5.5	Effective Mass.....	191
<b>9</b>	<b>The Bound Polaron Problem</b>	
9.1	Introduction .....	195
9.2	Model.....	195
9.3	Perturbative Methods for the Bound Polaron.....	196
9.3.1	The Platzman-Sak Method.....	196
9.3.2	The Method of Ghaem-Maghani et al.....	199
9.3.3	Exact Evaluation of the Second-Order Rayleigh-Schödinger Perturbation Theory Correction by Engineer and Tzoar .....	203
9.4	Non-Perturbative Methods for the Bound Polaron .....	204
9.4.1	Strong-Coupling Theory: Landau-Pekar Method.....	204
9.4.1.1	Harmonic Wave Function.....	204
9.4.1.2	Hydrogenic Wave Function .....	205
9.4.2	Feynman's Path-Integral Method.....	205
9.4.3	Variational Method of Larsen .....	206
9.4.4	The Lee-Low-Pines-Huybrechts Method.....	207
9.4.4.1	Harmonic Oscillator Approximation .....	208
9.4.4.2	Hydrogenic Approximation.....	209

9.4.5	The Feynman-Haken Path-Integral Method .....	210
9.4.5.1	Harmonic Oscillator Effective Potential.....	212
9.4.5.2	Hydrogenic Effective Potential.....	214
9.4.6	The Lee-Low-Pines-Gross Method.....	216
9.4.7	The Canonical Reduction Method of Mukhopadhyay and Mitra.....	217
9.4.8	Variational Method of Devreese et al.....	220
9.4.9	Variational Method of Adamowski.....	220
<b>10</b>	<b>Magneto-Optics of Polarons</b>	
10.1	Introduction .....	223
10.2	Theoretical Model for the Magneto-Polaron Problem .....	224
10.3	Variational Calculation of Larsen.....	225
10.4	Perturbation Theory.....	226
10.5	The Pinning Effect .....	226
10.6	Polaron Resonances.....	229
10.7	Polaron Zeeman Effect.....	229
10.8	Cyclotron Resonance Mass .....	229
<b>11</b>	<b>Large Optical Bipolaron</b>	
11.1	Introduction .....	233
11.2	Feynman-Haken Path-Integral Method.....	234
11.3	The Lee-Low-Pines-Huybrechts Method.....	235
<b>12</b>	<b>Instabilities in the Polaron Models</b>	
12.1	Introduction .....	243
12.2	Self-Trapping Transition in a Polaron Gas .....	243

## SECTION III Polarons in Arbitrary Dimensions and Confined System

---

<b>13</b>	<b>Multi-Dimensional Polarons and Bound Polarons</b>	
13.1	Introduction .....	253
13.2	The $N$ -Dimensional Free Polaron.....	254
13.2.1	The Model Hamiltonian.....	254
13.2.2	Weak and Intermediate-Coupling Theory: The Lee-Low-Pines Method (1989).....	255
13.2.3	Strong-Coupling Theory: The Landau-Pekar Method (1990).....	260
13.2.3.1	Harmonic Approximation .....	261
13.2.3.2	Hydrogenic Approximation.....	263
13.3	The $N$ -Dimensional Bound Polaron .....	265
13.3.1	The Modified Lee-Low-Pines Approach .....	265
13.3.2	Strong-Coupling Solution: The Landau-Pekar Approach.....	267
13.3.2.1	Harmonic Oscillator Approximation .....	267
13.3.2.2	Hydrogenic Approximation.....	268
13.3.3	All-Coupling Solution: The Feynman-Haken Path-Integral Method .....	269
13.3.3.1	Harmonic Oscillator Approximation .....	270
13.3.3.2	Hydrogenic Approximation.....	271
13.3.4	The Lee-Low-Pines-Gross (LLPG) Method .....	273

13.3.5	The Lee-Low-Pines-Huybrechts Method.....	274
13.3.5.1	Harmonic Oscillator Approximation .....	274
13.3.5.2	Hydrogenic Approximation.....	275
<b>14</b>	<b>Polarons in Confined Geometries</b>	
14.1	Introduction .....	277
14.2	Confinement Potential.....	278
14.3	Polarons in a Quantum Dot.....	284
14.3.1	Second-Order Rayleigh-Schödinger Perturbation Theory for a Parabolic Quantum Dot.....	284
14.3.1.1	Ground State .....	284
14.3.1.2	First Excited State .....	290
14.3.2	Path-Integral Solution: All Coupling Result.....	294
14.3.3	Relaxed and Effective Mass Excited States of an All-Coupling Quantum Dot Polaron: The LLPG Method .....	298
14.3.4	Ground and Excited State Energies: The Lee-Low-Pines-Huybrechts Method .....	304
14.3.4.1	The Ground State.....	304
14.3.4.2	The First Excited State .....	308
14.4	Polarons in a Quantum Wire.....	312
14.5	Pinning Effect in a Quantum Dot.....	321
<b>15</b>	<b>Bipolarons in a Quantum Dot</b>	
15.1	Introduction .....	327
15.2	Formalism.....	327
15.3	Numerical Results and Discussion .....	329
<b>16</b>	<b>Magneto-Polarons in a Quantum Dot</b>	
16.1	Introduction .....	333
16.2	The Model .....	333
16.3	Polaron Zeeman Effect in a Quantum Dot.....	334
16.3.1	The RSPT Solution .....	334
16.3.2	Non-Diagonal Green Function Method (2000).....	339
<b>17</b>	<b>Polarons in One Dimension: Fröhlich–Toyozawa–Luttinger Model</b>	
17.1	Introduction .....	345
17.2	The Fröhlich–Toyozawa–Luttinger Model.....	346
17.3	Elimination of Phonon Degrees of Freedom.....	351
17.4	Energy Spectrum .....	353
17.5	Evaluation of the Momentum Distribution Function .....	357

## SECTION IV Polaron in Tight-binding Models

---

<b>18</b>	<b>Small Polaron: Holstein Model</b>	
18.1	Introduction .....	371
18.2	The Holstein Model.....	371
18.3	Polaron Ground State Energy and Band Narrowing due to Polaron Formation.....	376

<b>19</b>	<b>Polaron in Tight Binding Models with Coulomb Correlation</b>	
19.1	Introduction .....	381
19.2	The Hubbard Model .....	382
19.3	The Holstein-Hubbard Model.....	383
19.4	Nature of the Spin-Density Wave–Charge-Density Wave Transition .....	384
19.5	Effect of Anharmonic Phonons on the Charge-Density Wave–Spin-Density Wave Transition.....	394
19.6	An Improved Variational Treatment for the Charge-Density Wave–Spin-Density Wave Transition.....	401
19.7	Self-Trapping Transition in the One-Dimensional Extended Holstein-Hubbard Model .....	410
19.8	Self-Trapping Transition in the Two-Dimensional Extended Holstein-Hubbard Model .....	419
<b>20</b>	<b>Non-Equilibrium Transport through a Single-Molecular Transistor</b>	
20.1	Introduction .....	431
20.2	Anderson-Holstein-Caldeira-Legget Model .....	431
20.3	Decoupling of the Oscillator-Bath Interaction .....	433
20.4	Effective Hamiltonian .....	434
20.5	Tunneling Current and Spectral Function .....	435
	<b>Bibliography .....</b>	<b>451</b>
	<b>Index.....</b>	<b>461</b>
