Contents

Preface xi

Further Reading List xiii

1 Equilibrium and Non-Equilibrium States in NMR
- 1.1 Individual Spins: Elements of Quantum Mechanics 1
- 1.2 Ensembles of Spins: The Density Operator 6
- 1.3 Simple NMR: The Magnetisation Vector 8
- 1.4 Coupled (Interacting) Spins: The Product Operator Formalism 12
- 1.5 Exercises for Chapter 1 13

References 14

2 Simple Relaxation Theory
- 2.1 An Introductory Example: Spin-Lattice Relaxation 15
- 2.2 Elements of Statistics and Theory of Random Processes 17
  - 2.2.1 Stochastic Variables 17
  - 2.2.2 Stochastic Functions of Time 19
- 2.3 Time-Dependent Perturbation Theory and Transition Probabilities in NMR Relaxation Theory 22
- 2.4 Predictions of the Simple Model 24
- 2.5 Finite Temperature Corrections to the Simple Model 27

References 29

3 Relaxation through Dipolar Interactions
- 3.1 The Nature of the Dipolar Interaction 31
- 3.2 The Solomon Relaxation Theory for a Two-Spin System 36
  - 3.2.1 The Dipolar Alphabet 36
  - 3.2.2 The Solomon Equations 39
- 3.3 The Nuclear Overhauser Enhancement 41
- 3.4 Carbon-13 Relaxation 44
- 3.5 Intermolecular Dipolar Relaxation 45
- 3.6 Exercises for Chapter 3 49

References 50

4 The Redfield Relaxation Theory
- 4.1 The Eigenstate Formulation 51
  - 4.1.1 Equation of Motion for the Density Operator 51
  - 4.1.2 Introducing the Ensemble of Ensembles 54
  - 4.1.3 Approximations Leading to the Redfield Equation 56

4.1.4 The Physics of the Redfield Equation ... 58
4.2 The Operator Formulation ... 60
4.2.1 Irreducible Tensor Formulation of the Perturbation Hamiltonian ... 60
4.2.2 Equation of Motion of Expectation Values ... 65
4.2.3 Transverse Relaxation ... 67
4.3 The Liouvillian Formulation of the WBR Theory ... 69
4.4 Relaxation in the Presence of Radiofrequency Fields ... 70
Exercises for Chapter 4 ... 73
References ... 73

5 Applications of Redfield Theory to Systems of Spin 1/2 Nuclei
5.1 Multispin Dipolar Relaxation: Magnetisation Modes ... 75
5.1.1 Magnetisation Modes ... 76
5.1.2 Relaxation Matrix for Magnetisation Modes ... 79
5.2 Anisotropic Chemical Shielding and Its Relaxation Effects ... 81
5.2.1 The Chemical Shielding Tensor ... 81
5.2.2 The CSA Hamiltonian ... 83
5.2.3 The CSA Relaxation Mechanism ... 86
5.2.4 The DD/CSA Interference ... 89
5.2.5 Transverse Relaxation Effects of the DD/CSA Interference ... 91
5.2.6 The Antisymmetric Component ... 92
5.3 Spin-Rotation Relaxation ... 93
5.4 Other Relaxation Mechanisms for Spin 1/2 Nuclei ... 94
Exercises for Chapter 5 ... 95
References ... 95

6 Spectral Densities and Molecular Dynamics
6.1 Time-Correlation Function for Isotropic Small-Step Rotational Diffusion ... 97
6.2 More General Rigid Objects ... 102
6.2.1 The Asymmetric and Symmetric Top ... 102
6.2.2 Physical Interpretation of Correlation Times ... 107
6.3 Dynamic Models for Non-Rigid Molecules ... 108
6.3.1 General ... 108
6.3.2 Woessner's Models ... 110
6.3.3 The "Model-Free" Approach ... 113
6.3.4 Correlated Motions ... 118
6.4 Spectral Density Models for Low-Resolution Work ... 119
Exercises for Chapter 6 ... 121
References ... 121

7 NMR: The Toolbox
7.1 Evolution of Product Operators ... 126
7.1.1 Radiofrequency Pulses and Free Precession ... 127
7.1.2 A Simple Example: Insensitive Nuclei Enhanced by Polarisation Transfer (INEPT) ... 129
7.2 Two-Dimensional NMR ... 132
7.3 Coherence Order Selection ... 135
7.3.1 Phase Cycling ... 136
7.3.2 Pulsed Field Gradients ... 137
Exercises for Chapter 7 ... 137
References ... 137

8 Measuring T_1 and T_2 Relaxation Rates
8.1 Spin-Lattice Relaxation Rates 139
8.1.1 Inversion-Recovery 139
8.1.2 Other Methods 141
8.1.3 Field-Cycling 144
8.2 Spin-Spin Relaxation Rates 145
8.2.1 Spin-Echo Methods 146
8.2.2 Spin-Lock Methods 149
References 151

9 Cross-Relaxation Measurements
9.1 Heteronuclear NOE Measurements 153
9.2 Homonuclear Cross-Relaxation: NOESY 156
9.2.1 General 156
9.2.2 Interpretation and Practical Aspects 159
9.3 Cross-Relaxation in the Rotating Frame: ROESY 162
9.4 Homonuclear Cross-Relaxation: One-Dimensional Experiments 164
References 166

10 Cross-Correlation and Multiple-Quantum Relaxation Measurements
10.1 Cross-Correlated Longitudinal Relaxation 170
10.1.1 Inversion-Recovery-Related Methods 171
10.1.2 The Full Relaxation Matrix Approach 174
10.1.3 The Homogeneous Master Equation 175
10.1.4 Cross-Correlated Dipolar Relaxation 177
10.2 Cross-Correlated Transverse Relaxation 179
10.2.1 General 179
10.2.2 Transverse Cross-Correlation in Proteins 180
10.3 Transverse Relaxation-Optimised Spectroscopy: TROSY 182
10.4 Multiple- and Zero-Quantum Relaxation 185
Exercises for Chapter 10 188
References 188

11 Relaxation and Molecular Dynamics
11.1 Molecular Motion 191
11.2 Extreme Narrowing: Rapidly Reorienting Molecules 192
11.2.1 Motional Anisotropy 193
11.2.2 The Me_2THMN Example 194
11.2.3 Symmetric Tops and Methyl Group Rotation 195
11.2.4 Quadrupolar Interactions 196
11.3 Field-Dependent Relaxation: Slower Motion 198
11.3.1 Applications in Organic Chemistry 199
11.3.2 Carbohydrates 200
11.3.3 Guest-Host Complexes 204
11.4 Molecular Dynamics in Proteins 205
11.4.1 Backbone Motion 205
11.4.2 Spectral Density Mapping 210
11.4.3 Side-Chain Motion 213
11.4.4 Order Parameters and Thermodynamics 215
11.4.5 The Ubiquitin Example 217

11.5 Low-Field Experiments: Slow Motions and Intermolecular Relaxation 219
References 222

12 Applications of Relaxation-Related Measurements to Structure Determination
12.1 Applications in Organic Chemistry 227
12.2 Applications to Three-Dimensional Structure Determination in Macromolecules 231
12.2.1 NOE-Based Structure Information 231
12.2.2 Generating Structures 232
12.2.3 The Calbindin D_{9k} Example 233
12.2.4 "Exact NOEs": Back to Ubiquitin 237
12.2.5 Larger Systems 237
12.3 Determination of Structure from Cross-Correlated Relaxation 239
12.3.1 DD/CSA Cross-Correlation 239
12.3.2 DD/DD Cross-Correlation 240
References 241

13 Relaxation and Chemical Exchange
13.1 Chemical Exchange as Origin of Correlation Time 245
13.2 Intermediate Chemical Exchange 247
13.3 Exchange Effects on Longitudinal Magnetisation 249
13.3.1 The Bloch–McConnell Equations 249
13.3.2 Nuclear Overhauser Enhancement Spectroscopy (NOESY) and zz-Exchange Methods 250
13.4 Transverse Magnetisation: Measurements of Intermediate and Fast Exchange 252
13.4.1 Effects on Lineshape 252
13.4.2 Spin-Lock Methods 254
13.4.3 Spin-Echo Methods 255
13.5 Multiple-Quantum (MQ) Relaxation and Exchange 256
13.6 Dynamics and Exchange: An Illustrative Example 258
13.7 Dark State Spectroscopy 258
13.7.1 Relaxation Dispersion 259
13.7.2 Saturation Transfer 259
References 260

14 Effects of Quadrupolar Nuclei
14.1 Quadrupolar Interaction 265
14.2 Spin Relaxation for Nuclei with $S \geq 1$ 269
14.2.1 Population Kinetics and Spin-Lattice Relaxation 269
14.2.2 The Simple T_1 Case 270
14.2.3 Transverse Relaxation 271
14.2.4 Observation and Interpretation of Multiexponential Relaxation 272
14.2.5 Intermolecular Quadrupolar Relaxation 273
14.3 Quadrupolar Effects on Neighbouring $I = 1/2$ Spins 275
14.4 Applications of Relaxation Effects of Quadrupolar Nuclei 280
14.4.1 Protein Hydration 280
14.4.2 Simple Ions in Micro-Heterogeneous Environment 282
14.4.3 The $^{13}CD_3$ System 283
Exercise for Chapter 14 284
References 284

15 Nuclear Spin Relaxation in Paramagnetic Systems in Solution
15.1 Electron Spin Interactions and Relaxation in Liquids 287
15.2 Paramagnetic Enhancement of Spin-Lattice and Spin-Spin Relaxation Rates 291
15.2.1 The Solomon–Bloembergen–Morgan (SBM) Theory 292
15.2.2 Beyond the SBM Theory 294
15.2.3 The Curie-Spin Relaxation 297
15.2.4 The Outer-Sphere Relaxation 297
15.3 Paramagnetic Effects on Nuclear Multispin Phenomena 298
15.4 Dynamic Nuclear Polarisation 300
15.5 Applications of NMR Relaxation in Paramagnetic Systems 302
15.5.1 MRI Contrast Agents 302
15.5.2 Paramagnetic Metalloproteins 304
15.5.3 Paramagnetic Dark State Spectroscopy 306
References 307

16 Long-Lived Nuclear Spin States and Related Topics
16.1 Nuclear Singlet and Triplet States 311
16.2 Creation and Detection of Long-Lived Spin States 312
16.3 Relaxation Properties of Long-Lived States 318
16.4 Long-Lived Coherences 325
16.5 Applications of Long-Lived States 326
16.6 *Para*-Hydrogen Induced Polarisation 328
Exercise for Chapter 16 329
References 329

17 Nuclear Spin-Relaxation in Other Aggregation States
17.1 Gases 333
17.1.1 Supercritical Fluids 333
17.1.2 Gases under Low and Moderate Pressure 335
17.1.3 Xenon-129 335
17.2 Anisotropic Fluids 336
17.2.1 Relaxation Theory for Anisotropic Fluids 338
17.2.2 Experimental Methods for Anisotropic Fluids 340
17.2.3 Example: Small Molecular Probes 341
17.2.4 Example: Model Membranes 342
17.2.5 "Model-Free" Analysis of Residual Dipolar Couplings 343
17.3 Solid State 344
17.3.1 Deuteron NMR 344
17.3.2 Proton NMR 346
17.3.3 Carbon-13 NMR 347
17.4 Heterogeneous Systems 349
17.4.1 Water in Porous Rocks – Inverse Laplace Transform Methods 349
17.4.2 Water in Immobilised Protein Gels – the EMOR Theory 351
References 353
