CONTENTS

J. KERTÉSZ, R. N. MANTEGNA and S. MICCICHÈ:– Preface	p.	XIII
Course group shot	»	XVI
STEFAN THURNER – Virtual social science	»	1
1. Introduction	»	1
1'1. What is social science?	»	3
1'1.1. Social systems are continuously restructuring networks	»	3
1'2. Social systems are complex systems	»	4
1'2.1. What is co-evolution?	»	6
2. A virtual society	»	7
2'1. The universe: the Pardus game	»	7
2'1.1. The census of avatars	»	8
2'1.2. The structure of the universe	»	9
2'1.3. Trade and economy	»	9
2'1.4. Communication	»	10
2'1.5. Friends and enemies	»	10
2'1.6. Performance measures of players — “states”	»	11
2'1.7. Alliances	»	11
3. How do people interact?	»	11
3'1. Testing a classic sociological hypothesis of social interaction: weak ties	»	12
3'1.1. How strong do people interact? — Kepler’s law	»	15
3'2. Forces between avatars — Newton’s law for social interactions?	»	15
4. How do people organize?	»	17
4'1. Dynamics of the “atoms of society”: triadic closure	»	17
4'1.1. Testing triadic closure — the triad-significance profile	»	18
4'2. Taking triadic closure seriously — understanding social multilayer network structure	»	19
4'2.1. Characteristic exponents	»	20
4'3. Degree distributions for negative ties are power laws — positive are not	»	21
4'4. Social balance	»	23
4'4.1. Origin of social balance	»	23
4'5. Avatars organize in multiples of four	»	24
4'5.1. Dunbar numbers	»	24

4'6.	The behavioral code	»	25
4'6.1.	Two ways of seeing the same data	»	26
4'6.2.	Behavioral code and predicting behavior	»	26
4'6.3.	Worldlines of players	»	28
4'6.4.	Zipf's law in the human behavioral code	»	30
4'7.	Network-network interactions	»	30
5.	Gender differences	»	32
5'1.	Gender differences in networking	»	34
5'1.1.	Gender differences in network topology	»	34
5'1.2.	Gender differences in temporal behavior	»	36
6.	Mobility — how avatars move in their universe	»	37
6'1.	Jump- and waiting time distributions	»	37
6'2.	Long-term memory and mobility	»	38
7.	The wealth of virtual nations	»	39
7'1.	More on the Pardus economy	»	40
7'2.	Wealth	»	40
7'3.	Inequality	»	40
7'4.	Behavioral factors for wealth	»	42
7'4.1.	Influence of activity on wealth	»	42
7'4.2.	Influence of achievement factors on wealth	»	42
7'4.3.	Wealth depends on how social you are	»	43
7'5.	Wealth and position in the multilayer network	»	43
8.	Towards a new social science?	»	45
M.	STROHMAIER — Measuring social and political phenomena on the web . .	»	51
1.	Background and motivation	»	51
2.	Measuring gender inequality on Wikipedia	»	52
3.	Modeling minorities in social networks	»	53
4.	Measuring voting power and behavior in liquid democracy	»	54
5.	Conclusions	»	55
A.-L.	BARABÁSI and F. MUSCIOTTO — Science of success: An introduction	»	57
1.	Introduction	»	58
2.	Performance and success	»	59
2'1.	Performance drives success	»	59
2'2.	Performance is bounded	»	61
3.	Success as a collective phenomenon	»	62
3'1.	Success or recognition is unbounded	»	62
3'2.	Success breeds success	»	64
3'3.	Quality times previous success determines future success	»	65
4.	Science of science	»	65
4'1.	Quantifying long-term scientific impact	»	65
4'2.	The Q-model	»	67
4'3.	Credit is based on perception, not performance	»	70
5.	Conclusions	»	71

FABRIZIO LILLO – Introduction to market microstructure and heterogeneity of investors	»	73
1. Introduction	»	73
2. A gentle introduction to limit order books	»	75
3. Market impact and order flow	»	76
3'1. Order flow	»	77
3'1.1. Origin of long memory	»	77
3'1.2. Heterogeneity of investors and long memory	»	78
3'2. Market impact	»	80
3'3. Impact of metaorders and square root law	»	81
3'3.1. Cross-impact	»	83
3'3.2. Co-impact	»	83
4. Heterogeneity in time scales	»	84
5. Conclusions and outlook	»	87
SALVATORE MICCICHÈ and ROSARIO N. MANTEGNA – A primer on statistically validated networks	»	91
1. Introduction	»	92
2. Disparity filter	»	93
3. Multiple hypothesis test correction	»	95
4. Statistically validated networks	»	95
5. Examples of applications of statistically validated networks	»	98
6. Community detection in statistically validated networks	»	99
7. Software for the computation and analysis of statistically validated networks	»	101
8. Conclusions	»	101
JÁNOS KERTÉSZ – Temporal networks: Characterization, motifs and spreading	»	105
1. Introduction	»	105
2. Definition and characterization of temporal networks	»	107
2'1. Definition and representation	»	107
2'2. Characterization	»	107
3. Motifs in temporal networks	»	108
3'1. Time-evolution of static motifs	»	109
3'2. Mobility motifs	»	111
3'3. Temporal motifs	»	112
4. Spreading on temporal networks	»	115
5. Outlook	»	118
A. BARRAT – Temporal networks of face-to-face interactions	»	121
1. Introduction	»	121
2. Data, representations of data and structures	»	123
2'1. Statistics	»	123
2'2. Aggregated networks	»	124

2'3. Contact matrices and contact matrices of distributions	»	126
2'4. Structures	»	127
3. Models	»	129
4. Processes on temporal networks	»	131
5. Using data	»	133
5'1. Which representation to use	»	133
5'2. Designing and testing interventions	»	134
5'3. Incomplete datasets	»	135
6. Conclusion	»	136
VITTORIA COLIZZA – Introduction to modeling disease spread in space	»	141
1. Spatial spread of infectious disease epidemics	»	142
2. Spatially structured populations and metapopulation approach	»	143
2'1. Patches and coupling	»	145
2'2. Relevant spatial effects	»	150
3. The stochastic discrete metapopulation scheme	»	151
3'1. Effective approach	»	153
3'2. Mechanistic approach	»	155
4. Local <i>vs.</i> global invasion	»	159
4'1. Local epidemic threshold	»	160
4'2. Global invasion threshold	»	161
5. Going beyond basic assumptions	»	165
6. Conclusions	»	169
LOUIS M. SHEKHTMAN and SHLOMO HAVLIN – Spatio-temporal infrastruc- ture networks	»	171
1. Introduction	»	172
2. Resilience properties of single networks	»	172
2'1. Traffic	»	174
2'2. Physiology	»	175
2'3. Climate	»	175
2'4. Recovery	»	175
3. Resilience of interdependent networks	»	177
3'1. Methods for reducing cascades	»	179
3'2. Networks of networks	»	181
3'3. Recovery of interdependent networks	»	182
3'4. Spatially embedded interdependent networks	»	183
3'5. Localized attack	»	185
3'6. Summary and further reading	»	187
List of participants	»	191
