Contents

Chapter 1	Impact and Evolution of Biophysics in Medicinal Chemistry	1
	<i>M. Eggen and J. Schindler</i>	
1.1	Introduction	1
1.2	Evolution of Biophysics in Medicinal Chemistry	3
1.2.1	Phenotypic Drug Discovery	3
1.2.2	Targeted and Fragment-based Drug Discovery	3
1.2.3	Phenotypic Drug Discovery 2.0	5
1.2.4	Evolving Compound Collections and Chemical Technologies	5
1.3	Biophysical Screening Approaches	7
1.3.1	Protein- and Ligand-based NMR	7
1.3.2	Thermal Denaturation Techniques	8
1.3.3	Surface Plasmon Resonance	9
1.3.4	Affinity Selection and Size Exclusion Chromatography Mass Spectrometry	10
1.4	Mechanism of Action and Determination of Kinetics and Thermodynamics	12
1.4.1	Mechanism of Action-evading Nuisance Mechanisms	12
1.4.2	Residence Time, Target Engagement and Kinetics	13
1.4.3	Thermodynamics in Optimization	16

1.5	Structural Biology of Complex Targets—Overcoming Challenges with Biophysics	17
1.5.1	Introduction	17
1.5.2	Protein Complexes	18
1.6	Conclusion and Introduction to Book Chapters	18
	Acknowledgements	20
	References	20
Chapter 2	Ligand-detected NMR Methods in Drug Discovery	23
	<i>Maria Ángeles Canales and Juan Félix Espinosa</i>	
2.1	Introduction	23
2.2	NMR Methods	24
2.2.1	Relaxation	24
2.2.2	Transferred-NOESY experiments	26
2.2.3	Saturation Transfer Difference	26
2.2.4	Water-LOGSY	28
2.2.5	Pseudo Contact Shift measurements	28
2.3	Competitive NMR Experiments	29
2.4	Binding Quantification	30
2.5	NMR in Drug Discovery	31
2.5.1	Screening	31
2.5.2	Hit validation	33
2.5.3	Structure-guided Hit Optimization	33
2.6	Example of Application to Medicinal Chemistry Projects	35
2.7	Conclusions and Future Perspectives	38
	References	39
Chapter 3	Receptor-based NMR Techniques in Drug Discovery	44
	<i>V. N. Sivanandam, Ganeko Bernardo-Seisdedos and Oscar Millet</i>	
3.1	Introduction	44
3.2	Protein–ligand Binding Understood as an Exchange Process	45
3.3	Chemical Shift Perturbation Monitoring the Receptor	48
3.3.1	General Considerations	48
3.3.2	Expanding the Molecular Weight Available for a Protein Target	50
3.3.3	Methyl TROSY-based Approaches	51

3.4	Paramagnetic Spin-labels for Lead Discovery and Optimization	53
3.4.1	General Considerations	53
3.4.2	Accessorizing Proteins with Spin Labels	54
3.4.3	The SLAPSTIC Experiment	55
3.5	Residual Dipolar Couplings (RDCs)	56
3.6	Structure–Activity Relationship (SAR) by NMR	57
3.7	NMR-based Drug Discovery in Membrane Proteins	59
3.7.1	Solution <i>versus</i> Solid State NMR	60
3.7.2	Isotope Labeling in Membrane Proteins	61
3.8	Concluding Remarks	62
	References	63

Chapter 4 Molecular Mechanisms of Drug Action: X-ray Crystallography at the Basis of Structure-based and Ligand-based Drug Design 67

*J. de Ruycck, G. Roos, E.-M. Krammer, M. Prévost,
M. F. Lensink and J. Bouckaert*

4.1	Introduction	67
4.2	Applications	69
4.2.1	Structure/Dynamics/Affinity Relationships – Rational Drug-design	69
4.2.2	Crystal Structures as an Input for <i>In silico</i> Drug-design: Docking and Scoring	75
4.2.3	Rational Drug Design from a Ligand-based Approach Based on Properties Formulated in Chemical Reactivity Theory	78
4.3	Future Perspectives	79
	Acknowledgements	81
	References	81

Chapter 5 Mass Spectrometry in Biophysics: from High Throughput Screening to Structural Biology 87

T. Gheyi and M. Molina-Martin

5.1	Introduction	87
5.2	Applications	89
5.2.1	Native Mass Spectrometry of Biomolecules to Study Structure and Dynamics	90
5.2.2	Covalent Approaches to Interrogate Proteins	93

5.2.3	HDX-MS	97
5.2.4	Mass Spectrometry Techniques for Drug Screening	100
5.3	Perspectives	106
	Acknowledgements	107
	References	107
Chapter 6	Characterization of Pharmaceutical Solids Combining NMR, X-ray diffraction and Computer Modelling	120
	<i>M. Sardo, I. C. B. Martins, C. Vladiskovic, M. Teresa Duarte, J. Rocha, N. Masciocchi and L. Mafra</i>	
6.1	General Introduction	120
6.2	Methods	121
6.2.1	SSNMR Spectroscopy in Pharmaceutical Research	121
6.2.2	Single-crystal X-ray Diffraction	127
6.2.3	Powder X-ray Diffraction	130
6.3	Application Case-Studies	138
6.3.1	Polymorphism	138
6.3.2	NMR and X-ray Approaches to Study Amorphous Systems	142
6.3.3	Drug Delivery Systems	146
6.3.4	Formulated Drugs	147
6.3.5	From Crystal Packing Interactions to Crystal Structure Determination	148
6.4	Future Perspectives	160
	Acronyms	161
	Acknowledgements	162
	References	162
Chapter 7	Surface Plasmon Resonance for Identifying and Characterising Small Molecule Ligands	170
	<i>S. J. Pollack</i>	
7.1	Introduction and Perspectives	170
7.1.1	Principles of SPR	170
7.1.2	Overcoming the Challenges of SPR	171
7.2	Applications of SPR	177
7.2.1	SPR Considerations in the Different Phases of Drug Discovery	177
7.2.2	Recent Applications of SPR in Drug Discovery	194

7.2.3	Advances in Membrane Protein Capabilities for SPR	196
7.2.4	SPR in Drug Metabolism and Pharmacokinetics	198
7.2.5	Biomarker Characterization by SPR	199
7.3	Future Perspectives	199
	Acknowledgements	204
	References	204

Chapter 8 Fluorescent Thermal Shift Assays for Identifying Small Molecule Ligands **208**

Andrew D. Scott

8.1	Introduction	208
8.2	FTSA Principle	209
8.3	Optimal Experimental Set-up	211
8.3.1	Buffer	211
8.3.2	Protein	212
8.3.3	Dyes	212
8.3.4	Compounds	214
8.3.5	Controls	214
8.3.6	Temperature	214
8.3.7	Instrumentation	215
8.4	Data Analysis	215
8.4.1	T_m Determination	215
8.4.2	K_d Determination	216
8.5	Advantages	218
8.6	Limitations	219
8.7	FTSA in Drug Discovery	222
8.7.1	Screening for Ligand Binding	223
8.7.2	Screening for Fragment Binding	224
8.7.3	Mechanism of Small Molecule Inhibition	225
8.8	Successful Applications of FTSA for Ligand Binding Screens	227
8.9	Other Uses of FTSA	228
8.10	Non-fluorescent Dye Thermal Shift Assays	229
8.11	Cellular Thermal Shift Assays	230
8.11.1	CETSA	231
8.11.2	Future Perspectives	232
	Acknowledgements	234
	References	234

Chapter 9	Fluorescent Probes in Medicinal Chemistry	239
	<i>Silvia Ortega-Gutiérrez</i>	
9.1	Introduction	239
9.2	Types of Fluorophores	240
9.3	Applications of Fluorescent Probes for the Study of Macromolecules	242
9.3.1	Fluorescent Probes for the Study of Proteins	242
9.3.2	Fluorescent Probes for the Study of Nucleic Acids	249
9.4	Fluorescent Probes for the Study of Metabolites	253
9.4.1	Detection of Metabolites Using Small Molecule Fluorophores	253
9.4.2	FRET Biosensors for the Detection of Small Molecules	254
9.4.3	Development of Cellular Organelle-targeting Fluorescent Probes	255
9.5	Future Perspectives	257
	Abbreviations	258
	Acknowledgements	258
	References	258
Chapter 10	Transmission Cryo-electron Microscopy in Drug Discovery	263
	<i>Carlos Fernández Rodríguez, Oscar Llorca and Fabrizio Martino</i>	
10.1	Introduction	263
10.2	Advances in Cryo-electron Microscopy	264
10.3	Examples of High-resolution Cryo-EM Structures Suitable for Drug Discovery	267
10.4	Future Perspectives	272
	Acknowledgements	274
	References	274
Chapter 11	Molecular Imaging	277
	<i>Eugen Kubala, Marion I. Menzel, Benedikt Feurecker, Steffen J. Glaser and Markus Schwaiger</i>	
11.1	Magnetic Resonance Imaging	279
11.1.1	Hyperpolarization	279

11.2	Modalities Based on Radioactive Isotopes	283
11.2.1	Positron Emission Tomography: Principles and Applications	284
11.2.2	Single-Photon Emission Computed Tomography: Principles and Applications	289
11.3	Optical Molecular Imaging	291
11.3.1	Bioluminescence Imaging (BLI)	291
11.3.2	Fluorescence Imaging	294
11.4	Multi-Spectral Optoacoustic Tomography	296
11.5	Conclusions	299
	Acknowledgements	299
	References	299
