|---|-----------|
| <b>Chapter 1 Zeolite Science and Perspectives</b> | <b>1</b>  |
| <i>R. Millini and G. Bellussi</i>                 |           |
| 1.1 Historical Background                         | 1         |
| 1.2 Natural Zeolites                              | 3         |
| 1.3 Synthesis                                     | 5         |
| 1.3.1 Role of the Organic Additives               | 7         |
| 1.3.2 Role of the Heteroatom                      | 11        |
| 1.3.3 Two-dimensional (2D) Zeolites               | 13        |
| 1.3.4 Hierarchical Porous Structures              | 15        |
| 1.4 Applications                                  | 19        |
| 1.4.1 Zeolites as Heterogeneous Catalysts         | 19        |
| 1.4.2 Zeolites for Adsorption and Separations     | 23        |
| 1.5 Conclusions and Outlook                       | 26        |
| References  | 28        |
| <br>  |           |
| <b>Chapter 2 Zeolite Structures</b>               | <b>37</b> |
| <i>Stef Smeets and Xiaodong Zou</i>               |           |
| 2.1 Introduction                                  | 37        |
| 2.2 Zeolite Framework Types                       | 38        |
| 2.2.1 Classification                              | 38        |
| 2.2.2 Database of Zeolite Structures              | 39        |
| 2.2.3 Channels                                    | 40        |
| 2.2.4 Building Units                              | 41        |
| 2.2.5 Natural Tiles                               | 46        |
| 2.2.6 Framework Density                           | 47        |

|                  |   |           |
|------------------|---|-----------|
| 2.2.7            | Coordination Sequences                            | 47        |
| 2.2.8            | Vertex Symbols                                    | 48        |
| 2.3              | Zeolite Structures                                | 49        |
| 2.3.1            | Framework Composition                             | 49        |
| 2.3.2            | Extra-framework Species                           | 50        |
| 2.3.3            | Stacking Faults and Disorder                      | 50        |
| 2.4              | Examples of Framework Structures                  | 51        |
| 2.4.1            | SOD   | 51        |
| 2.4.2            | LTA   | 51        |
| 2.4.3            | FAU   | 52        |
| 2.4.4            | EMT   | 54        |
| 2.4.5            | RHO   | 54        |
| 2.4.6            | MOR   | 55        |
| 2.4.7            | MFI   | 55        |
| 2.4.8            | FER   | 56        |
| 2.4.9            | CHA   | 57        |
| 2.4.10           | MWW   | 57        |
| 2.4.11           | *BEA  | 58        |
| 2.4.12           | *-SSO   | 59        |
| 2.4.13           | UTL   | 61        |
| 2.4.14           | Zeolite Frameworks with Extra-large Pores         | 62        |
| 2.5              | Structure Determination                           | 63        |
| 2.5.1            | Information in a Powder Diffraction Pattern       | 64        |
| 2.5.2            | Powder Diffraction for Phase Identification       | 65        |
| 2.5.3            | Structural Analysis using Powder Diffraction Data | 66        |
| 2.5.4            | Electron Diffraction                              | 67        |
| 2.5.5            | Structural Analysis using HRTEM Images            | 68        |
| 2.6              | Conclusions                                       | 69        |
|                  | Acknowledgements                                  | 70        |
|                  | References  | 70        |
| <b>Chapter 3</b> | <b>Synthesis of Zeolites</b>                      | <b>73</b> |
|                  | <i>K. G. Strohmaier</i>                           |           |
| 3.1              | Introduction                                      | 73        |
| 3.2              | Basic Zeolite Synthesis                           | 75        |
| 3.2.1            | Mineralizing Agents                               | 76        |
| 3.2.2            | Effects of Water Concentration                    | 78        |
| 3.3              | Gel Preparation and Crystallization               | 79        |
| 3.4              | Effects of Gel Composition                        | 83        |
| 3.4.1            | Isomorphous Substitution                          | 84        |
| 3.4.2            | Aluminophosphates                                 | 86        |

|                  |   |            |
|------------------|---|------------|
| 3.5              | Structure Directing Agents  | 87         |

| <b>Chapter 4</b> | <b>Hierarchical Zeolites</b>  | <b>103</b> |
|                  | <i>Wilhelm Schwieger, Albert Gonche Machoke, Bastian Reiprich, Tobias Weissenberger, Thangaraj Selvam and Martin Hartmann</i> |            |
| 4.1              | Introduction  | 103        |
| 4.1.1            | General Aspects and Definition  | 103        |
| 4.1.2            | Diffusion Limitations   | 105        |
| 4.1.3            | Reduction of Diffusion Path Length  | 107        |
| 4.1.4            | Preparation Principles of Hierarchical Zeolites   | 108        |
| 4.2              | Preparation Methods for Hierarchical <i>All-zeolitic</i> Materials  | 111        |
| 4.2.1            | Bottom-up Approaches  | 112        |
| 4.2.2            | Top-down Approaches   | 117        |
| 4.2.3            | Summary and Comparison  | 121        |
| 4.3              | Characterisation of Hierarchical Zeolites   | 122        |
| 4.3.1            | Structural Properties   | 125        |
| 4.3.2            | Textural Properties   | 127        |
| 4.3.3            | Transport/Diffusion Properties  | 129        |
| 4.3.4            | Mechanical and Hydrothermal Stability   | 130        |
| 4.3.5            | Catalytic Test Reactions  | 133        |
| 4.4              | Application of Hierarchical Systems Involving Zeolites  | 136        |
| 4.4.1            | Hierarchy in Zeolitic Composites  | 136        |
| 4.4.2            | Technical Applications of Hierarchical Zeolitic Composites  | 137        |
| 4.5              | Summary/Conclusions   | 139        |
|                  | References  | 140        |
| <b>Chapter 5</b> | <b>Two-dimensional Zeolites</b>   | <b>146</b> |
|                  | <i>Pavla Eliášová and Jiří Čejka</i>  |            |
| 5.1              | Introduction to 3D <i>versus</i> 2D Zeolites  | 146        |

|                  |  |            |
|------------------|--|------------|
| 5.2              | Types of Layers Spatial Arrangement  | 148        |
| 5.2.1            | 2D Forms Prepared by Direct Synthesis                                      | 149        |
| 5.2.2            | Forms of Layered Zeolites Prepared by Post-synthesis Modifications         | 154        |
| 5.2.3            | Layer-like Materials   | 158        |
| 5.3              | Synthesis of 2D Zeolites   | 160        |
| 5.3.1            | Bottom-up – Hydrothermal Synthesis   | 160        |
| 5.3.2            | Top-down – Disassembly of Germanosilicates into Layered Zeolite Precursors | 168        |
| 5.4              | Chemistry of 2D Zeolites – Modification of Interlamellar Space             | 171        |
| 5.4.1            | Detemplation by Thermal Combustion and Chemical Extraction                 | 172        |
| 5.4.2            | Intercalation into Interlamellar Space                                     | 172        |
| 5.4.3            | Delamination/Exfoliation and Colloidal Suspensions                         | 179        |
| 5.5              | Properties of 2D Zeolites and their Characterization                       | 181        |
| 5.6              | Application of 2D Zeolites   | 183        |
| 5.7              | Conclusions  | 184        |
|                  | Acknowledgements   | 185        |
|                  | References   | 185        |
| <b>Chapter 6</b> | <b>Structure Determination</b>   | <b>194</b> |
|                  | <i>Russell E. Morris and Phoebe K. Allan</i>                               |            |
| 6.1              | What Does ‘Structure’ Mean?  | 194        |
| 6.2              | X-ray Diffraction  | 196        |
| 6.2.1            | Diffraction from Atoms and Arrangements of Atoms                           | 197        |
| 6.2.2            | Diffraction from Crystalline Materials                                     | 197        |
