<b>Chapter 1</b>	<b>Structures of Open-chain Forms of Reducing Sugars and Related Molecules. Mechanistic Probes of Sugar Carbonyl Group Additions</b>	<b>1</b>
1.1	Definitions and Structures . . . . .	1
1.1.1	Definitions . . . . .	1
1.1.2	Straight-chain Structures of Reducing Sugars $C_n(H_2O)_m$ . . . . .	2
1.1.3	Common Deoxy, Oxidised or Aminated Reducing Sugars . . . . .	6
1.1.4	Sugar Alcohols . . . . .	7
1.1.5	Cyclitols . . . . .	9
1.1.6	<i>R,S</i> Stereochemical Designations in Carbohydrate Chemistry – Prochirality . . . . .	9
1.1.7	Designation of the Stereochemistry of Glycerides . . . . .	11
1.2	Reducing Sugars in Aqueous Solution . . . . .	13
1.2.1	Types of Structure Present in Aqueous Solution . . . . .	13
1.2.2	Composition of Aqueous Sugar Solutions . . . . .	13
1.2.3	Sources of Monosaccharides and Oligosaccharides . . . . .	14
1.2.4	Kinetics of Mutarotation . . . . .	20
1.3	Reaction with Low Molecular Weight Alcohols – the Fischer Glycoside Synthesis . . . . .	34
1.4	Formation, Anomerisation and Hydrolysis of Glycosylamines . . . . .	37
	References . . . . .	39
<b>Chapter 2</b>	<b>Conformations of Sugar Rings and Glycosidic Linkages</b>	<b>42</b>
2.1	Differences between Conformational Analysis of Carbohydrates and other Organic Molecules . . . . .	42
2.2	The <i>Gauche</i> Effect . . . . .	43
2.3	Conformations of Acyclic Sugars . . . . .	44
2.4	Description of the Conformations of Sugar Rings . . . . .	45
2.5	Analysis of Carbohydrate Conformation and Configuration by NMR: the Key Role of the Karplus Equation . . . . .	49
2.6	The Anomeric Effect . . . . .	53
2.7	Conformational Free Energies in Pyranoses . . . . .	59

Carbohydrate Chemistry and Biochemistry: Structure and Mechanism, 2<sup>nd</sup> Edition

Published by the Royal Society of Chemistry, www.rsc.org

2.8	Rationalisation of the Composition of Aqueous Solutions of Reducing Sugars . . . . .	60
2.9	Description of Exocyclic Conformations . . . . .	61
2.10	The Exo-anomeric Effect . . . . .	64
2.11	Determination of the Conformations of Hydroxymethyl Groups . . . . .	67
2.12	Conformations of Septanosides . . . . .	67
	References . . . . .	68
<b>Chapter 3 Nucleophilic Substitution at the Anomeric Centre</b>		<b>72</b>
3.1	Non-enzymic Nucleophilic Substitution at the Anomeric Centre . . . . .	72
3.1.1	Stereochemistry of Oxocarbenium Ions . . . . .	73
3.2	Lifetimes of Intermediates . . . . .	74
3.2.1	The Jencks Clock . . . . .	74
3.3	The Methoxymethyl System . . . . .	75
3.3.1	$\alpha$ -Hydrogen Isotope Effects in the Methoxymethyl System . . . . .	77
3.4	Geminal Effects and Development of Conjugation . . . . .	78
3.4.1	Geminal Effects . . . . .	78
3.4.2	Development and Loss of Conjugation . . . . .	78
3.5	Spontaneous Hydrolysis of Glycosyl Derivatives . . . . .	79
3.5.1	Substituent Effects . . . . .	80
3.5.2	Effect of Anomeric Configuration and Ring Size . . . . .	83
3.6	Lifetimes of Glycosyl Cations in Water and Bimolecular Displacements at the Anomeric Centre . . . . .	85
3.7	Acid-catalysed Hydrolysis of Glycosides . . . . .	86
3.7.1	Specific Acid Catalysis . . . . .	86
3.7.2	Site of Productive Protonation . . . . .	87
3.7.3	Differences in Structure–reactivity Patterns in Acid-catalysed and Spontaneous Hydrolyses . . . . .	89
3.7.4	Acid-catalysed Hydrolysis of Nucleosides . . . . .	91
3.7.5	Intermolecular General Acid Catalysis of Glycoside Hydrolysis . . . . .	94
3.7.6	Intramolecular General Acid Catalysis of Glycoside Hydrolysis . . . . .	96
3.8	Electrophilic Catalysis of Glycoside Hydrolysis . . . . .	99
3.9	Hydrolysis of Thioglycosides and Thioacetals . . . . .	100
3.10	Heavy Atom and Remote Hydrogen Kinetic Isotope Effects in Glycosyl Transfer . . . . .	101
3.10.1	Measurement of Small Isotope Effects . . . . .	101
3.10.2	Inductive and Steric Effects of Isotopes of Hydrogen . . . . .	103
3.10.3	$\beta$ -Hydrogen Kinetic Isotope Effects . . . . .	105
3.10.4	Heavy Atom Kinetic Isotope Effects . . . . .	105
3.10.5	Transition State Structure Determination from Multiple Kinetic Isotope Effects . . . . .	106
3.11	Hydrolyses of Ketosides . . . . .	108
3.11.1	Hydrolysis of Sialic Acid (Neuraminic Acid) Derivatives . . . . .	108
3.12	Neighbouring Group Participation in Glycoside Hydrolyses . . . . .	110
3.12.1	Participation by Acetamido . . . . .	110
3.12.2	Participation by Carboxylate and Phosphate: Electrostatic Catalysis? . . . . .	111

3.12.3	Participation by Ionised Sugar Hydroxyls: Base-catalysed Hydrolysis of Glycosides . . . . .	113
3.13	Anomeric Nucleophilic Displacements in Organic Media . . . . .	115
3.13.1	Solvolyses . . . . .	117
3.13.2	Synthesis of Glycosides . . . . .	120
	References . . . . .	138

## Chapter 4 Enzymic Glycoside Hydrolysis and Transglycosylation: Kinetics and Mechanism 146

4.1	Types of Enzyme-catalysed Glycosyl Transfer . . . . .	146
4.2	Stereochemistry and Steady-state Kinetics of Enzymic Glycosyl Transfer . . . . .	149
4.3	Reversible Inhibition and Transition State Analogy . . . . .	155
4.3.1	Competitive Inhibition . . . . .	155
4.3.2	Transition State Analogues and Adventitious Tight-binding Inhibitors . . . . .	158
4.3.3	Anticompetitive Inhibition . . . . .	169
4.4	Investigating Glycosidase Mechanisms: Methods and Concepts . . . . .	169
4.4.1	Determination of Stereochemistry . . . . .	170
4.4.2	Temperature Dependence of Rates and Equilibria . . . . .	172
4.4.3	Effect of Change of pH . . . . .	173
4.4.4	Kinetic Isotope Effects . . . . .	176
4.4.5	Variation of Substrate Structure . . . . .	178
4.4.6	Rational Variation of Enzyme Structure-site-directed Mutagenesis . . . . .	181
4.4.7	Large Kinetic Consequences of Remote Changes in Enzyme or Substrate Structure: Intrinsic Binding Energy and the Circe Effect . . . . .	182
4.4.8	The Use and Misuse of X-ray Crystallographic Data in the Determination of Enzyme Mechanism . . . . .	183
4.4.9	Enzymes with Multiple Subsites such as Polysaccharidases . . . . .	184
4.4.10	Affinity Labelling . . . . .	187
4.5	General Constraints and Common Features of Glycohydrolases . . . . .	191
4.6	Reactions of Glycosidases with Enol Ethers . . . . .	197
4.7	Inverting <i>O</i> -glycosidases . . . . .	197
4.7.1	Some Inverting Glycosidase Families . . . . .	202
4.8	Reaction of <i>N</i> -glycosides with Inversion . . . . .	210
4.8.1	Nucleoside Phosphorylases and Hydrolases . . . . .	211
4.8.2	ADP Ribosylation of Proteins (Including Sir2 Deacetylases) . . . . .	216
4.8.3	Excision of Nucleoside Bases with Inversion at the Polymer Level . . . . .	219
4.9	Retaining <i>O</i> -glycosidases and Transglycosylases . . . . .	223
4.9.1	Direct Observation of Glycosyl-enzyme Intermediates . . . . .	223
4.9.2	Effect of Mutation of the Nucleophilic Carboxylate . . . . .	231
4.9.3	The Acid/Base Catalytic Machinery and its Mutation . . . . .	232
4.9.4	Reaction Trajectories . . . . .	233
4.9.5	Retaining Glycosidase Families . . . . .	235
4.10	Retaining <i>N</i> -glycosylases and <i>N</i> -transglycosylases . . . . .	252
4.10.1	Retaining NAD <sup>+</sup> -glycohydrolases and Cyclases . . . . .	252
4.10.2	tRNA Transglycosylases . . . . .	254
4.10.3	2'-Deoxyribosyl Transferases . . . . .	256
	References . . . . .	257

<b>Chapter 5</b>	<b>Primary Structure and Conformation of Oligosaccharides and Polysaccharides</b>	<b>273</b>
5.1	Introduction: Depiction and Isolation of Polysaccharides . . . . .	273
5.2	Determination of Structure and Conformation of Oligosaccharides and Polysaccharides . . . . .	275
5.2.1	Determination of Constituent Sugars and Substitution Pattern . . . . .	275
5.2.2	Mass Spectrometry . . . . .	279
5.2.3	Diffraction by Single Crystals, Crystal Powders and Fibres . . . . .	282
5.2.4	The Role of Fourier Transforms . . . . .	288
5.2.5	Use of NMR Pulse Sequences in the Determination of Sequence: an Example . . . . .	292
5.2.6	High-resolution Solid State <sup>13</sup> C NMR-CP-MAS . . . . .	298
5.2.7	Atomic Force Microscopy . . . . .	299
5.3	Polysaccharides in Solution . . . . .	302
5.3.1	Solutions of Polysaccharides in Ionic Liquids . . . . .	303
5.3.2	Models of Polysaccharide Behaviour in Solution . . . . .	303
5.3.3	Separation on the Basis of Molecular Size . . . . .	305
5.3.4	Rheological Properties of Polysaccharides . . . . .	306
5.3.5	Laser Light Scattering and Related Techniques . . . . .	310
5.3.6	Chiroptical Methods . . . . .	312
5.3.7	Kinetics of Polysaccharide Degradation . . . . .	314
5.4	Oligosaccharides and Polysaccharides: Structure, Conformation and Importance . . . . .	315
5.4.1	Disaccharides and Oligosaccharides . . . . .	315
5.4.2	(1 → 4)-Linked Diequatorial Pyranans . . . . .	318
5.4.3	(1 → 4)-Linked Axial-equatorial Pyranans . . . . .	338
5.4.4	(1 → 4)-Diaxially Linked Pyranans . . . . .	351
5.4.5	(1 → 3)-Linked Homopyranans . . . . .	359
5.4.6	(1 → 2)-Linked Homopyranans . . . . .	363
5.4.7	Homopyranans without Direct Linkages to the Ring . . . . .	364
5.4.8	Homofuranans . . . . .	369
5.4.9	Polysaccharides from One Sugar but with more than One Linkage in the Main Chain . . . . .	372
5.4.10	Polysaccharides with More than One Sugar in the Chain . . . . .	377
5.4.11	Bacterial Cell Wall Peptidoglycans and Related Material . . . . .	397
	References . . . . .	400
<b>Chapter 6</b>	<b>Heterolytic Reactions of OH Groups</b>	<b>415</b>
6.1	Electronic Effects in Carbohydrates: Effects on Acid/base Dissociations . . . . .	415
6.2	Metal Ion Complexation . . . . .	417
6.3	Nucleophilicity Towards Boron . . . . .	422
6.4	Reactions with Electrophilic Carbon and Products Thereof . . . . .	425
6.4.1	Alkylation . . . . .	425
6.4.2	Formation and Removal of Carbohydrate Acetals . . . . .	428
6.4.3	Acylation and Deacylation . . . . .	437
6.4.4	Reactions with Electrophilic Carbon at the CO <sub>2</sub> Oxidation State . . . . .	446

6.5	Reaction with Electrophilic Nitrogen: Nitrites and Nitrates . . . . .	449
6.6	Reaction with Electrophilic Silicon. . . . .	457
6.7	Reaction of Sugar OH Groups with Phosphorus Compounds . . . . .	460
6.7.1	General Considerations . . . . .	460
6.7.2	Phosphonium Intermediates in the Activation of OH to Nucleophilic Substitution . . . . .	461
6.7.3	Phosphite Esters. . . . .	463
6.7.4	Transfer of Phosphoryl Groups to and from Sugar OH Groups	464
6.8	Reactions of Sugar OH Groups with Electrophilic Sulfur . . . . .	475
6.8.1	Non-enzymic Reactions with Electrophilic Sulfur . . . . .	475
6.8.2	Enzyme-catalysed Sulfuryl Transfer and Sulfate Hydrolysis . . .	476
6.9	Oxyacid Esters of Other Elements . . . . .	479
	References . . . . .	480

## Chapter 7 Heterolytic Chemistry of the Carbon Chain 488

7.1	Introduction . . . . .	488
7.1.1	$S_N$ Reactions at Main-chain Carbons . . . . .	488
7.1.2	Enolisation and Shift Mechanisms of Hydroxy Carbonyl Rearrangements . . . . .	491
7.2	Isomerisation by Enolisation: the Classic Lobry de Bruyn–Alberda van Eckenstein Reaction and its Enzymic Counterparts. . . . .	495
7.3	Isomerisation of Reducing Sugars by Hydride Shift . . . . .	501
7.4	The Bilik and Related Reactions . . . . .	502
7.5	Beyond the Lobry de Bruyn–Alberda von Eckenstein Rearrangement: Deep-seated Reactions of Sugars in Base . . . . .	505
7.6	Rearrangements of Glycosylamines . . . . .	511
7.6.1	The Amadori and Heyns rearrangements. . . . .	511
7.6.2	Osazone Formation . . . . .	512
7.6.3	The Maillard Reaction . . . . .	515
7.7	Aromatisation . . . . .	522
7.8	The Formose Reaction . . . . .	523
7.9	Two-electron Oxidations of Isolated OH Groups . . . . .	524
7.9.1	Non-enzymic Oxidations Involving Valence-changing Oxyacid Esters . . . . .	524
7.9.2	Non-enzymic Hydride Abstraction from Carbohydrates . . . . .	529
7.9.3	NAD(P)-linked Enzymic Oxidations and Epimerisations. . . . .	531
7.10	Oxidations of Diols. . . . .	538
7.11	Eliminations and Additions . . . . .	539
7.11.1	Steric and Electronic Factors Influencing Reactivity . . . . .	539
7.11.2	Electrophilic Additions to Glycals . . . . .	542
7.11.3	$S_N'$ Reactions at the Anomeric Centre: The Ferrier Rearrangement. . . . .	545
7.12	Epimerisations $\alpha$ - to and Eliminations $\alpha,\beta$ - to the Carboxylates of Uronic (and Aldaric) Acids. . . . .	548
7.12.1	Non-enzymic Epimerisation and Elimination: Principles of Enzymic Carbanion Generation. . . . .	548
7.12.2	Polysaccharide Lyases. . . . .	550
7.12.3	The Enolase Superfamily. . . . .	556
7.12.4	C5 Uronyl Residue Epimerases . . . . .	557

7.13	Biological Oxidation–Elimination–Addition and Related Sequences . . .	558
7.13.1	<i>S</i> -Adenosyl Homocysteine Hydrolase and <i>S</i> -Ribosyl Homocysteinase . . . . .	558
7.13.2	Biosynthesis of Nucleotide Diphospho 6-Deoxy Sugars. . . . .	561
7.13.3	<i>L</i> -1-Myo-Inositol-1-Phosphate Synthetase. . . . .	565
7.13.4	Glycoside Hydrolase Family 4. . . . .	567
7.14	GH88: Glycoside Cleavage by Addition of Water . . . . .	569
	References . . . . .	570
<b>Chapter 8</b>	<b>Glycosyl Transferases and Oligosaccharide and Polysaccharide Biosynthesis</b>	<b>579</b>
8.1	Chemical Types of, and Constraints on, Glycosyl Transfer from Activated Donors . . . . .	579
8.2	Structural Families of Glycosyl Transferases. . . . .	584
8.3	Inverting Glycosyl Transferases . . . . .	586
8.3.1	Inverting NDP-sugar Glycosyl Transferases with the GT-A Fold . . . . .	586
8.3.2	Inverting, Nucleotide-sugar-using Transferases with GT-A Fold that are Metal-ion Independent . . . . .	589
8.3.3	Inverting Leloir Enzymes with the GT-B Fold . . . . .	590
8.3.4	Inverting, Glycosyl Transferases with Lipid-phosphate and Lipid-pyrophosphate Donors . . . . .	595
8.4	Retaining Glycosyl Transferases . . . . .	601
8.4.1	Glycogen Phosphorylase and Related Enzymes in GT35 (GT-B)	603
8.4.2	The Search for a Nucleophile: LgtC and other GT8 Transferases (GT-A Fold) . . . . .	608
8.4.3	Trehalose Phosphate Synthetase (GT20, GT-B Fold), the Definitive $S_{Ni}$ Enzyme . . . . .	611
8.4.4	Interconversion of $S_{Ni}$ and Double-displacement Phosphorylases and Glycosyl Transferases . . . . .	613
8.4.5	Other Retaining Transferases known to have a GT-A Fold (GT Families 6, 15, 27, 55, 64 and 88). . . . .	613
8.4.6	Other Retaining Transferases known to have a GT-B Fold (GT Families 3, 4, 5 and 72). . . . .	615
8.5	UDPGlcNAc Epimerase . . . . .	619
8.6	UDP Pyranose-furanose Mutases, Especially UDPGal $p \leftrightarrow$ UDPGal $f$ Mutase. . . . .	621
	References . . . . .	624
<b>Chapter 9</b>	<b>Glycoconjugates: Biosynthesis and Properties</b>	<b>631</b>
9.1	Definitions and Common Structural Elements . . . . .	631
9.2	Chance, Necessity and Analytical Resolution in Glycobiology and Glycomics . . . . .	632
9.3	Specialised Subcellular Structures in the Biosynthesis and Salvage of Glycoconjugates . . . . .	634
9.4	<i>O</i> -Linked Glycoproteins . . . . .	640
9.4.1	Mucin-type Glycosylation . . . . .	640
9.4.2	<i>O</i> -Mannosylation of Ser and Thr. . . . .	642

9.4.3	Tryptophan Indole C2 (and N1?)-mannosylation . . . . .	644
9.4.4	<i>O</i> -Fucosylation . . . . .	644
9.4.5	Dynamic <i>O</i> -glycosylation with GlcNAc . . . . .	645
9.4.6	<i>O</i> -Glycosylation of Post-translationally Modified Residues . . . . .	645
9.5	Protein <i>N</i> -glycosylation . . . . .	647
9.5.1	High-mannose <i>N</i> -linked Glycoproteins . . . . .	652
9.5.2	From Cis to Medial Golgi: Glucosaminyl Transferase I, Golgi Endomannosidase II (GH38) and the $\beta$ - <i>N</i> -acetyl Glucosaminyl Transferases . . . . .	654
9.5.3	In the Trans Golgi: Capping and Export – Structures from a Random Walk through the Golgi? . . . . .	656
9.5.4	Hybrid Glycans . . . . .	659
9.6	Glycolipids . . . . .	660
9.6.1	Glycosyl Diacyl Glycerides . . . . .	660
9.6.2	Oligoglycosyl Ceramides . . . . .	662
9.6.3	Glycosylphosphatidylinositol (GPI) Anchors . . . . .	667
9.6.4	Exopolysaccharides, Lipopolysaccharides and Lipid A . . . . .	668
9.6.5	Phase Behaviour of Glycolipids . . . . .	671
9.7	Detection and Measurement of Protein–Carbohydrate Interactions . . . . .	675
9.8	Carbohydrate Binding Modules and Lectins . . . . .	679
9.8.1	Lectins . . . . .	679
9.8.2	Carbohydrate Binding Modules (CBMs) . . . . .	679
9.8.3	Types of CBM . . . . .	681
9.9	The Blood Group Antigens . . . . .	685
9.10	Deficiencies of Lysosomal Carbohydrate-Active Enzymes in Humans . . . . .	689
	References . . . . .	693

## Chapter 10 One-electron Chemistry of Carbohydrates 702

10.1	Classes of Radical Reactions of Carbohydrates . . . . .	702
10.2	Methods of Investigation of Radicals in Carbohydrate Chemistry and Biochemistry . . . . .	704
10.2.1	Electron Spin Resonance: Aspects of Importance to Carbohydrates . . . . .	705
10.2.2	Conformations of Carbohydrate Radicals as Determined by ESR . . . . .	708
10.2.3	Kinetics of Radical Elementary Steps . . . . .	714
10.3	Generation of Radicals . . . . .	717
10.3.1	Direct Addition of Electrons . . . . .	718
10.3.2	Direct Removal of Electrons . . . . .	720
10.3.3	Generation of Carbohydrate Radicals by Addition to Double Bonds . . . . .	729
10.3.4	Generation of Carbohydrate Radicals by Hydrogen Atom Abstraction . . . . .	729
10.3.5	Carbohydrate Radical Generation by Fission of Weak Bonds . . . . .	745
10.4	Reactions of Radicals . . . . .	749
10.4.1	Stereochemistry of Atom Transfer to Oxygenated Radicals . . . . .	749
10.4.2	Heterolysis of Carbohydrate Radicals . . . . .	751

10.4.3	Ribonucleotide Reductase . . . . .	757
10.4.4	Acyloxy and Related Rearrangements . . . . .	761
10.5	Carbohydrate Carbenes . . . . .	766
	References . . . . .	771
	<b>Appendix</b>	<b>777</b>
	<b>Subject Index</b>	<b>780</b>
