The Problem of Time

Quantum Mechanics Versus General
Relativity

Contents

Part I Time in Fundamental Physics

1	Introduction: Conceptual Outline of Time	3
1.1	Time-Related Notions	3
1.2	Space-Related Notions Make for Useful Comparison	4
1.3	Physical Limitations on Intuitive Notions of Time and Space	6
1.4	Events	6
1.5	Philosophical Worldviews of Time	6
1.6	Some Properties Attributed to Time	7
1.7	Continuum Mathematics Models for Time	9
1.8	Some Basic Properties of Timefunctions	9
1.9	Non-continuum Modelling of Time	11
1.10	Mathematical Modelling of Space	12
1.11	Advent of Notions of Spacetime	12
1.12	‘Measuring Time’: Extra Connotations in the Word ‘Clock’	14
1.13	Measuring Length	17
2	Time, Space and Laws in Newtonian Mechanics	19
2.1	Newton’s Laws of Mechanics	19
2.2	Impact of Newtonian Mechanics	20
2.3	Newtonian Absolute Space	21
2.4	Newtonian Absolute Time	21
2.5	Aristotelian, Galilean and Newtonian Paradigms Compared	22
2.6	Newton’s Bucket	24
2.7	Newtonian Gravity	24
2.8	Electrostatics	26
2.9	Gravitation and Electrostatics Compared	26
2.10	Magnetostatics	27
2.11	Light Flashes	28
2.12	Cartesian and Curvilinear Tensors Within the Newtonian Paradigm	28
2.13	Principles of Dynamics (PoD) formulations of Mechanics	30

3	Absolute Versus Relational Motion Debate	33
3.1	Two Centuries of Critique of the Newtonian Paradigm	33
3.2	Concrete Example of Relational Particle Mechanics (RPM)	36
3.3	Ephemeris Time as a Realization of Mach's Time Principle	36
3.4	Universality of Relational Thinking	37
3.5	Electromagnetic Unification and the Luminiferous Aether	37
4	Time, Space, Spacetime and Laws in Special Relativity	41
4.1	Special Relativity (SR)	41
4.2	Invariant Interval, Indefinite Metric and Proper Time	42
4.3	Minkowski Spacetime's Geometrical Structure and Its Physical Meaning	44
4.4	Lorentzian Tensors (Alias 4-Tensors)	47
4.5	Minkowskian Paradigm of Physics	47
4.6	More on Time and Spacetime in the Minkowskian Paradigm	48
4.7	More on SR Clocks	50
4.8	Length Measurement in SR	51
4.9	Einstein's Eventual Opinion on the Theoretical Status of Clocks and Rods	51
4.10	Exercises I. Time in Mechanics and SR	52
5	Time and Ordinary Quantum Mechanics (QM)	55
5.1	A Simple Axiomatization of QM	55
5.2	Experimental Support for QM and Examples	59
5.3	Time in Nonrelativistic QM	60
5.4	Clocks in QM	62
5.5	Advent of Atomic Clocks	63
5.6	Quantum Inputs to Measuring Lengths and Masses	64
6	Quantum Field Theory (QFT)	65
6.1	Free Spin-0 Field	65
6.2	Free Spin- $\frac{1}{2}$ Field	67
6.3	Free Spin-1 Field: Electromagnetism, and Its Gauge Symmetry	68
6.4	Time in Quantum SR	70
6.5	Interacting Field Theories, Including Quantum Electrodynamics (QED)	71
6.6	Yang-Mills Theory Underlying the Nuclear Forces	73
6.7	Discrete Operations (Including Time-Reversal) in Quantum SR	75
6.8	Quantum-Level Evidence for SR	76
6.9	Grand Unified Theories	76
6.10	Exercises II. Time and Quantum Theory	76
7	Time and Spacetime in General Relativity (GR)	79
7.1	More Systematic Formulation of GR's Mathematics	83
7.2	Spacetime Action Principle for GR	84
7.3	Black Holes	85
7.4	Cosmology	88

7.5	Evidence for GR	89
7.6	Notions of Time in the Spacetime Formulation of GR	91
7.7	GR Issues with Clocks	92
7.8	Observers and Length Measurement in GR	93
7.9	GR's Singularity Theorems	94
8	Dynamical Formulations of GR	95
8.1	Topological Manifold Level Structure	95
8.2	Differential Geometry Level Structure	96
8.3	Metric Level Structure	97
8.4	Single-Hypersurface Concepts	97
8.5	Two-Hypersurface and Foliation Concepts	100
8.6	Foliations in Terms of Fleets of Possible Observers	102
8.7	Completion of the Curvature Projection Equations	104
8.8	A Further Type of Diffeomorphism: $Diff(\mathbb{M}, \mathfrak{Fol})$	104
8.9	Space-Time Split of the GR Action	104
8.10	The GR Action Equips $\mathfrak{Riem}(\Sigma)$ with a Metric Geometry	105
8.11	GR's Momenta	106
8.12	GR's Constraints	106
8.13	GR's Evolution Equations	107
8.14	Other Classical Applications of Geometrodynamics	108
8.15	Outline of Ashtekar Variables Alternative	109
8.16	Exercises V. Spacetime and Dynamical Formulations of GR	110
9	Classical-Level Background Independence and the Problem of Time. i. Time and Configuration	115
9.1	Many Routes to GR	118
9.2	Dynamics in the Great Tradition	118
9.3	Spacetime Versus 'Space or Configuration Space'	119
9.4	Configuration Spaces \mathfrak{C}	119
9.5	Configuration Spaces as Starting Point for Dynamics	121
9.6	Constraints Are All Versus Constraint Providers	121
9.7	Background Independence Aspect 1: Temporal Relationalism	122
9.8	Aspect 2: Configurational Relationalism	125
9.9	Minisuperspace Model Arena Version	129
9.10	Temporal and Configurational Relationalism Lead to Two of the Problem of Time Facets	130
9.11	Other Timefunction-Based Problem of Time Strategies	131
9.12	Fully Timeless Strategies	133
9.13	Providers, Algebraic Structure, and Beables	133
9.14	Aspect 3: Constraint Closure	134
9.15	Aspect 4: Assignment of Beables	137
10	Classical-Level Background Independence and the Problem of Time. ii. Spacetime and Its Interrelation with Space	141
10.1	Aspect 5: Spacetime Relationalism	141

10.2	Closure of <i>Diff</i> (\mathfrak{m})	142
10.3	Further Detail of This Book's Concepts and Terminology	142
10.4	Spacetime Observables	144
10.5	Classical-Level Background Metrics	145
10.6	Paths and Histories Strategies	145
10.7	Web of Classical Problem of Time Strategies	146
10.8	Aspect 6: Foliation Independence	146
10.9	Aspect 7: Spacetime Constructability	147
10.10	Model Arenas, Diffeomorphisms and Slightly Inhomogeneous Cosmology	149
10.11	Summary so Far: Seven Gates	150
10.12	Frontiers	150
11	Quantum Gravity Programs	157
11.1	Basic Considerations	157
11.2	Covariant Approach to Quantum Gravity	160
11.3	Quantum Field Theory in Curved Spacetime (QFTiCS)	163
11.4	Canonical Quantum Wave Equations	166
11.5	Quantum Cosmology	167
11.6	Path Integral Approach for Gravitational Theories	168
11.7	Covariant Approaches to Alternative Theories	169
11.8	Perturbative String Theory	172
11.9	Ashtekar Variables and Loop Quantum Gravity	175
11.10	Canonical Approach to Supergravity	176
11.11	Brane, Null Line, and Relational Alternatives	177
11.12	M-Theory	178
11.13	Conclusion: A Family Tree Overview	179
12	Quantum-Level Background Independence and the Problem of Time	181
12.1	Quantum Frozen Formalism Problem	181
12.2	Timefunction-Based Strategies for Frozenness	182
12.3	Quantum Configurational Relationalism	185
12.4	Quantum Constraint Closure	185
12.5	Quantum Assignment of Beables	187
12.6	Quantum-Level Timeless Approaches	187
12.7	Quantum Spacetime Relationalism	188
12.8	Path Integral Approaches	189
12.9	Consistent Histories Approaches	190
12.10	Web of Quantum Problem of Time Strategies	191
12.11	Quantum Foliation Independence: Aspect 6)	191
12.12	Quantum Spacetime Constructability	191
12.13	Summary of a Local Problem of Time	193
12.14	Aspect 8: Global Validity	194
12.15	Aspect 9: No Unexplained Multiplicities	194
12.16	Conclusion. i. Summary Figures	195

12.17 ii. Quantum-Level Frontiers 196

12.18 Exercises VI: Quantum Gravity, Background Independence and
the Problem of Time 197

Part II Classical Problem of Time

13 Advanced Nomenclature for Facet Interference 205

13.1 The Various Primary Ontologies Considered 205

13.2 The Cubert Classification of Quantization and Facets Ordering 207

14 Configuration Spaces and Their Configurational Relationalism 209

14.1 Examples of Configuration Spaces 209

14.2 Configurational Relationalism. i. Principles Discussed 210

14.3 ii. Direct Implementation 210

14.4 iii. ‘ \mathfrak{G} -Act \mathfrak{G} -All’ Method: Wider Indirect Implementation 211

14.5 On the Variety of Relational Configurations and RPMs 213

15 Temporal Relationalism (TR) 217

15.1 General Enough Temporal Relationalism Implementing (TRi)
Strategies 217

15.2 Equivalence to the Euler–Lagrange Formulation 221

15.3 TRi Form of Conjugate Momentum 221

15.4 Jacobi–Mach Equations of Motion 222

15.5 Differential Hamiltonian 222

15.6 Quadratic Constraints from Temporal Relationalism 223

15.7 Mach’s Time Principle and Its Implementations 224

15.8 Discussion of Generalized Local Ephemeris Time (GLET) 226

15.9 Emergent Jacobi Time 227

16 Combining Temporal and Configurational Relationalisms 231

16.1 Best Matching: General \mathfrak{G} 231

16.2 TRi-Best Matching 233

16.3 Emergent Jacobi–Barbour–Bertotti Time 234

16.4 TRi Configurational Relationalism in General 235

16.5 Example 1) Metric Shape and Scale RPM 235

16.6 Example 2) Metric Shape RPM 236

16.7 RPM Examples of Best Matching Solved 237

16.8 Direct Implementation of Configurational Relationalism
for RPMs 238

16.9 Limitations of RPM Models 240

17 Temporal Relationalism: More General Geometries 243

17.1 Minisuperspace GR 243

17.2 Jacobi–Synge Relational Actions 244

**18 Configurational Relationalism: Field Theory and GR’s Thin
Sandwich 247**

18.1 Fields and Finite-Field Portmanteaux 247

18.2	Configurational Relationalism Including Fields	248
18.3	Example 1) Electromagnetism Alone	251
18.4	Example 2) GR	251
18.5	Baierlein–Sharp–Wheeler Action and the Thin Sandwich	252
18.6	The Thin Sandwich Problem	253
18.7	Reparametrization-Invariant Relational Action for GR	253
18.8	Geometrical Action for GR	253
18.9	TRi Form of the Thin Sandwich	254
18.10	Comments on GR’s Emergent Machian Time	255
18.11	Example 3) GR with Fundamental Matter Fields	257
18.12	Example 4) Strong Gravity	259
19	Relationalism in Various Further Settings	261
19.1	Multiple Distinct Uses of the Word ‘Relational’	261
19.2	Well-Known Theoretical Variants in Upper Layers of Mathematical Structure	262
19.3	Relationalism and Affine Geometry	262
19.4	Relationalism and Conformal Geometry	263
19.5	Relationalism and the Point at Infinity	264
19.6	The Fermionic Selection Criterion	264
19.7	Relationalism in Ashtekar Variables Formulation of GR	265
19.8	Relationalism and Supersymmetry	267
19.9	Supersymmetric, Conformal and Affine Combinations	269
19.10	String and M-Theory Versus Relationalism	269
20	Other <i>Tempus Ante Quantum</i> Approaches	271
20.1	The Ante Postulate	271
20.2	Riem Time’s Hyperbolic Implementation	271
20.3	Scale Factor, Cosmic and Conformal Times	273
20.4	Parabolic and Part-Linear Implementations	274
20.5	Hidden Time Approaches	274
20.6	Implementation by Unhidden Time	275
21	Conformal Approach and Its York Time	277
21.1	Trace-Tracefree Irreducible Tensor Split	277
21.2	Maximal and CMC Slices, and Conformal Scaling	277
21.3	Model Arenas	278
21.4	Underlying Conformal Configuration Spaces	279
21.5	Canonical Twist and Definition of York and Euler Times	281
21.6	Dilational Time for Nontrivial \mathfrak{g}	283
21.7	Monotonicity of Dilational Times	285
22	Matter Times	287
22.1	Straightforward Matter Time	287
22.2	Reference-Fluid Matter Time	287

23	Classical Machian Emergent Time	289
23.1	Critique of the Previous Three Chapters' Notions of Time . . .	289
23.2	Time Transformations in the Relational Approach	290
23.3	Examples of Mass Hierarchies and Heavy–Light (h – l) Splits . .	291
23.4	Problems with Classical Precursors of Assumptions Commonly Made in Semiclassical Quantum Cosmology	295
24	Brackets, Constraints and Closure	297
24.1	General Consideration of Equipping with Brackets	298
24.2	Poisson Brackets and Phase Space	298
24.3	Lessons from the Dirac Algorithm	299
24.4	Some Temporal, Configurational and Closure Facet Interferences	302
24.5	Partitioned Constraint Algebraic Structures	304
24.6	The Remaining Temporal, Configurational and Closure Facet Interferences	305
24.7	Seven Strategies for Dealing with Constraint Closure Problems .	306
24.8	Examples of Distinctions Between Types of Constraint	308
24.9	Examples of Constraint Algebraic Structures	310
24.10	Examples of Constraint Closure Problems	313

59.11	Refoliation Invariance and Spacetime Construction	632
60	Epilogue III.C. Deeper Levels' Quantum Background	
	Independence and Problem of Time	635
60.1	Topological Manifold Level Considerations	636
60.2	Metric and Topological Space Level	637
60.3	Yet Deeper Levels of Structure	638
60.4	Situations with Negligible Deeper Levels of Structure	639
60.5	Records and Histories	639
60.6	Quantum Theory, Categories and Topoi	640
60.7	Multiple Choice Problem Revisited	641
60.8	Background Independence, Categories and Topoi	642
	Appendices: Mathematical Methods for Basic and Foundational Quantum Gravity	
	Appendix A Basic Algebra and Discrete Mathematics	647
A.1	Sets and Relations	647
A.2	Groups	649
A.3	Linear Algebra. i. Fields and Vector Spaces	650
A.4	ii. Rings and Modules*	653
A.5	Representation Theory	653
A.6	Graphs and Generalizations	653
	Appendix B Flat Geometry	655
B.1	Real Geometry	655
B.2	Minkowski Spacetime Geometries	659
B.3	Complex Transformations and Geometries	659
	Appendix C Basic Analysis	661
C.1	Real Analysis	661
C.2	Basic Functional Analysis	663
C.3	Complex Analysis*	664
C.4	Metric Spaces	664
C.5	Inverse and Implicit Function Theorems*	664
C.6	Topological Spaces	665
	Appendix D Manifold Geometry	667
D.1	Topological Manifolds	667
D.2	Differentiable Manifolds	669
D.3	Affine Differential Geometry	672
D.4	(Semi)Riemannian Manifolds	675
D.5	Some More General Metric Geometries*	677
D.6	Integration on Manifolds	678
D.7	Conformal Transformations, Metrics and Geometry	678
D.8	Exercises III. Basic Mathematics and Geometry	680

Appendix E	Lie Groups and Lie Algebras	685
E.1	Examples of Lie Groups and Lie Algebras	686
E.2	Killing Vectors and Isometries	689
E.3	Conformal and Homothetic Counterparts	690
E.4	Some Further Groups Acting upon \mathbb{R}^p	693
E.5	Yet Further Examples of Lie Groups in Physics	693
E.6	Lie Representations	694
E.7	Anticommutator Algebras	696
E.8	Exercises IV. Groups and Lie Groups	696
Appendix F	More Advanced Topology and Geometry*	701
F.1	Complex Manifolds	701
F.2	The Hodge-*	701
F.3	Algebraic Topology	702
F.4	General and Fibre Bundles	704
F.5	Characteristic Classes, Indices and Morse Theory	707
Appendix G	Configuration Space Geometry: Mechanics*	709
G.1	(Relational) Mechanics Configuration Spaces	709
G.2	Picking out the Triangleland Example	714
G.3	3-Particle Configuration Spaces in More Detail	718
G.4	Notions of Distance on Configuration Spaces	723
Appendix H	Field Theory and GR: Unreduced Configuration Space Geometry*	725
H.1	Field Theory: Unreduced Configuration Space Geometry	725
H.2	From Hilbert to Banach and Fréchet Spaces	725
H.3	Hilbert, Banach and Fréchet Manifolds	726
H.4	Topology of $\mathfrak{Riem}(\Sigma)$	727
H.5	$\mathfrak{Riem}(\Sigma)$ at Level of Geometrical Metric Structure	727
H.6	Conformal Variants	728
H.7	GR Alongside Minimally-Coupled Matter	729
H.8	Spaces of Affine Connections	729
Appendix I	GR Model Configuration Space Geometries*	731
I.1	Minisuperspace: Homogeneous GR	731
I.2	Perturbations about Minisuperspace: Unreduced Formulation	733
Appendix J	The Standard Principles of Dynamics (PoD). i. Finite Theory	739
J.1	Lagrangians and Euler–Lagrange Equations	739
J.2	Conjugate Momenta	741
J.3	Noether’s Theorem	741
J.4	Legendre Transformations	742
J.5	Passage to the Routhian	742
J.6	Passage to the Hamiltonian	743
J.7	Passage to the Anti-Routhian*	743

J.8	Further Auxiliary Spaces*	744
J.9	Corresponding Morphisms	744
J.10	Morphisms for the (Anti-)Routhian*	745
J.11	Poisson Brackets	746
J.12	Poisson Manifolds *	746
J.13	Peierls Bracket*	747
J.14	Hamilton–Jacobi Theory	748
J.15	Hamiltonian Formulation for Constrained Systems	748
J.16	(Anti-)Routhian Analogue of the Legendre Matrix*	752
J.17	Symplectic Treatment of Constrained Systems*	753
J.18	Constraint and Beables Algebraic Structures*	753
J.19	Hamilton–Jacobi Theory in Presence of Constraints	755
J.20	Classical Brackets Extended to Include Fermions*	755
Appendix K The Standard Principles of Dynamics. ii. Field Theory		757
K.1	Classification of Field-Theoretic Versions of the Principles of Dynamics	757
K.2	SR Spacetime Version	757
K.3	Space–Time Split SR Version	758
K.4	Curved Spacetime and GR Versions	760
K.5	Space–Time Split GR Version	761
Appendix L Temporal Relationalism Implementing Principles of Dynamics (TRiPoD)*		763
L.1	Finite-Field Theoretic Portmanteau Notation	763
L.2	Jacobi–Mach Formulation	763
L.3	Free End Notion of Space Variation	765
L.4	TRi Legendre Transformation	766
L.5	TRi-Morphisms and Brackets. i	767
L.6	$\mathfrak{d}A$ -Hamiltonians and Phase Spaces, and TRi Dirac-Type Algorithms	767
L.7	TRi-Morphisms and Brackets. ii)	770
L.8	TRi Constraint Algebraic Structures and Beables	770
L.9	TRi Hamilton–Jacobi Theory	770
L.10	TRiPoD End-Summary	771
L.11	Parageodesic Principle Split Conformal Transformations	771
Appendix M Quotient Spaces and Stratified Manifolds**		775
M.1	Quotienting out Groups: Further Useful Notions	775
M.2	Quotient Topologies	775
M.3	Orbifolds	776
M.4	Quotienting by Lie Group Action, and Slices	777
M.5	Stratified Manifolds	777
M.6	Locally Compact Hausdorff Second-Countable (LCHS) Spaces	780
M.7	Differential Spaces and Stratifolds	780
M.8	Further Stratified Spaces from the Principles of Dynamics	780

Appendix N	Reduced Configuration Spaces for Field Theory and GR**	781
N.1	Gauge Group Orbit Spaces	781
N.2	Loops and Loop Spaces for Gauge Theory	782
N.3	Topology of $\mathfrak{g} = \text{Diff}(\Sigma)$	782
N.4	Topology of Superspace (Σ)	783
N.5	Comparison Between Theories. i. Theorems	784
N.6	ii. Handling Dynamical Trajectories Exiting a Stratum	785
N.7	$\mathcal{ES}(\Sigma)$ and $\{\mathcal{ES} + \mathbf{V}\}(\Sigma)$	786
N.8	Notions of Distance for Geometroynamics	787
N.9	Modelling with Infinite- d Stratifolds	788
N.10	Reduced Treatment of Slightly Inhomogeneous Cosmology	788
N.11	Further Configuration Spaces	790
N.12	Loops and Loop Spaces	790
N.13	Knots and Knotspace	791
Appendix O	DE Theorems for Geometroynamics' Problem of Time*	793
O.1	Types of Global Issues	793
O.2	ODEs	794
O.3	First-Order PDEs	795
O.4	Second-Order PDEs	795
O.5	GR Initial Value Problem Theorems. i. Thin Sandwich Approach	796
O.6	ii. Conformal Approach	797
O.7	Theorems for the GR Cauchy Problem	797
O.8	Basic FDE Theory for GR and QFT	798
Appendix P	Function Spaces, Measures and Probabilities	801
P.1	Basic Formulation of Probability	801
P.2	Measure Theory*	803
P.3	More Advanced Formulation of Probability*	804
P.4	Distributions (in the Sense of Functional Analysis)*	805
P.5	Further Useful Function Spaces*	805
Appendix Q	Statistical Mechanics (SM), Information, Correlation	807
Q.1	Thermodynamics	807
Q.2	Thermodynamics for GR More Generally*	808
Q.3	Spaces of Substates*	809
Q.4	Imperfect Knowledge of a (Sub)system*	809
Q.5	Classical Statistical Mechanics (SM)	810
Q.6	Fine- and Coarse-Graining	811
Q.7	Classical Microscopic Notions of Entropy	813
Q.8	Classical Notions of Information*	813
Q.9	Classical Notions of Correlation*	814
Appendix R	Stochastic Geometry*	817
R.1	Metric Shape Statistics	817
R.2	Stratified Manifold Version**	819

Appendix S Deeper Levels. i. Generalized Configuration Spaces** . . .	821
S.1 Spaces of Differentiable Structures	821
S.2 Spaces of Topological Manifolds	821
S.3 Spaces of Metric Spaces	823
S.4 Lattices	824
S.5 Spaces of Subgroups, Topological Spaces and Collections . . .	825
S.6 Spaces of Sets?	826
Appendix T Deeper Levels. ii. Grainings, Information, Stochastics and Statistics**	827
T.1 Grainings	827
T.2 Notions of Information or Entropy	827
T.3 Stochastic and Statistical Treatment. i. Topological Manifold Level	828
T.4 ii. Topological Space Level	828
T.5 iii. Set and Collection of Subsets Levels	828
Appendix U Quantum SM, Information and Correlation*	829
U.1 Mixed States	829
U.2 Quantum Grainings	830
U.3 Quantum Versus Standard Probability Theory	830
U.4 Quantum SM	831
U.5 Quantum Notions of Entropy and Information	832
U.6 Quantum Correlations	832
Appendix V Further Algebraic Structures*	835
V.1 Reprs. i. Semidirect Product Groups in General	835
V.2 ii. Super-Poincaré Groups	836
V.3 iii. Diffeomorphism Groups	836
V.4 iv. Super-diffeomorphism Groups	837
V.5 v. For Kinematical Quantization of GR	837
V.6 Algebroids and Their Reprs	837
V.7 Operator Algebras	838
Appendix W Alternative Foundations for Mathematics**	841
W.1 Categories	841
W.2 Presheaves	843
W.3 Sheaves	843
W.4 Topoi	846
Appendix X Outline of Notation	849
X.1 For Part I and Unstarred Appendices	849
X.2 Additional Notation for Parts II and III, and Starred Appendices	850
References	851
Index	885
