

H. P. Freund • T. M. Antonsen, Jr.

Principles of Free Electron Lasers

Third Edition

 Springer

Contents

1	Introduction	1
1.1	Principles of Operation	3
1.2	Quantum Mechanical Effects	15
1.3	Experiments and Applications	17
1.4	Discussion	30
	References	31
2	The Wiggler Field and Electron Dynamics	41
2.1	Helical Wiggler Configurations	43
2.1.1	Idealized One-Dimensional Trajectories	43
2.1.2	Steady-State Trajectories	45
2.1.3	Stability of the Steady-State Trajectories	45
2.1.4	Negative-Mass Trajectories	47
2.1.5	General Integration of the Orbit Equations	48
2.1.6	Trajectories in a Realizable Helical Wiggler	53
2.1.7	Steady-State Trajectories	54
2.1.8	Stability of the Steady-State Trajectories	54
2.1.9	Negative-Mass Trajectories	57
2.1.10	Generalized Trajectories: Larmor and Betatron Oscillations	57
2.2	Planar Wiggler Configurations	63
2.2.1	Idealized One-Dimensional Trajectories	63
2.2.2	Quasi-Steady-State Trajectories	64
2.2.3	Negative-Mass Trajectories	66
2.2.4	Trajectories in Realizable Planar Wigglers	67
2.2.5	Gradient Drifts Due to an Axial Magnetic Field	69
2.2.6	Betatron Oscillations	70
2.2.7	The Effect of Parabolic Pole Faces	72

2.3	Tapered Wiggler Configurations	74
2.3.1	The Idealized One-Dimensional Limit	74
2.3.2	The Realizable Three-Dimensional Formulation	76
2.3.3	Planar Wiggler Geometries	76
	References	77
3	Incoherent Undulator Radiation	79
3.1	Test Particle Formulation	79
3.2	The Cold Beam Regime	84
3.3	The Temperature-Dominated Regime	87
	References	90
4	Coherent Emission: Linear Theory	91
4.1	Phase Space Dynamics and the Pendulum Equation	92
4.2	Linear Stability in the Idealized Limit	96
4.2.1	Helical Wiggler Configurations	98
4.2.2	Planar Wiggler Configurations	124
4.3	Linear Stability in Three Dimensions	144
4.3.1	Waveguide Mode Analysis	145
4.3.2	Optical Mode Analysis	167
	References	184
5	Nonlinear Theory: Guided-Mode Analysis	187
5.1	The Phase Trapping Efficiency	188
5.2	One-Dimensional Analysis: Helical Wigglers	192
5.2.1	The Dynamical Equations	193
5.2.2	Electron Beam Injection	202
5.2.3	Numerical Solution of the Dynamical Equations	205
5.2.4	The Phase Space Evolution of the Electron Beam	211
5.2.5	Comparison with Experiment	214
5.3	One-Dimensional Analysis: Planar Wigglers	215
5.3.1	The Dynamical Equations	215
5.3.2	Numerical Solutions of the Dynamical Equations	218
5.4	Three-Dimensional Analysis: Helical Wigglers	219
5.4.1	The General Formulation	220
5.4.2	Numerical Simulation for Group I Orbit Parameters	234
5.4.3	Numerical Simulation for Group II Orbit Parameters	243
5.4.4	Numerical Simulation for the Case of a Tapered Wiggler	247
5.4.5	Comparison with Experiment: A Submillimeter Free-Electron Laser	250
5.5	Three-Dimensional Analysis: Planar Wigglers	253
5.5.1	The General Configuration	254
5.5.2	The Initial Conditions	259
5.5.3	Numerical Simulation: Single-Mode Limit	260
5.5.4	Numerical Simulation: Multiple Modes	273
5.5.5	Comparison with the ELF Experiment at LLNL	277

5.6	The Inclusion of Space-Charge Waves in Three Dimensions	280
5.6.1	The Raman Criterion	280
5.6.2	The Field Equations	281
5.6.3	The Electron Orbit Equations	284
5.6.4	Numerical Examples	285
5.6.5	Comparison with Experiments	288
5.7	DC Self-Field Effects in Free-Electron Lasers	304
5.7.1	The Self-Fields	304
5.7.2	The Nonlinear Formulation	308
5.7.3	The Numerical Analysis	308
5.7.4	Comparison with Experiment	309
	References	312
6	Nonlinear Theory: Optical Mode Analysis	317
6.1	Optical Guiding	318
6.1.1	Optical Guiding and the Relative Phase	319
6.1.2	The Separable Beam Limit	322
6.2	Slippage and the Group Velocity	328
6.3	The SVEA, Time Dependence, and the Quasi-static Assumption	330
6.4	The Simulation of Shot Noise	332
6.5	Elliptical Wigglers and the JJ -Factor	335
6.5.1	The APPLE-II Wiggler Representation	335
6.5.2	The Resonance Condition and the JJ -Factor	336
6.5.3	The Generalized Pierce Parameter and Ming Xie Parameterization	338
6.6	Quadrupole and Dipole Field Models	339
6.7	The One-Dimensional Formulation	339
6.7.1	The Optical Field Representation	340
6.7.2	The Dynamical Equations	342
6.7.3	The Numerical Procedure	344
6.7.4	Numerical Simulation of a Seeded Amplifier with a Planar Wiggler	346
6.7.5	Numerical Simulation of a Seeded Amplifier with a Helical Wiggler	349
6.7.6	Three-Dimensional Extension of the Formulation	349
6.8	The Three-Dimensional Formulation	351
6.8.1	The Dynamical Equations for the Gauss-Hermite Modes	351
6.8.2	The Dynamical Equations for the Gauss-Laguerre Modes	359
6.8.3	The Numerical Procedure	364
6.8.4	Comparison with an Energy-Detuned Amplifier Experiment	365

6.8.5	Comparison with a Tapered Wiggler Amplifier Experiment	369
6.8.6	Simulation of an Elliptic Wiggler/Quadrupole Lattice	371
	References	375
7	Sideband Instabilities	379
7.1	The General Formulation	380
7.2	Trapped Electron Trajectories	384
7.3	The Small-Signal Gain	386
	References	389
8	Coherent Harmonic Radiation	391
8.1	Linear Harmonic Generation	392
8.1.1	Helical Wiggler Configurations	393
8.1.2	Planar Wiggler Configurations	395
8.1.3	The Periodic Position Interaction	409
8.2	Nonlinear Harmonic Generation	414
8.2.1	The Basis for Nonlinear Harmonic Generation	415
8.2.2	Planar Wiggler Configurations	417
	References	422
9	Oscillator Configurations	425
9.1	General Formulation	426
9.2	Planar Wiggler Equations	434
9.3	Characteristics: Slippage	436
9.4	Oscillator Gain	442
9.5	The Low-Gain Regime	444
9.6	Long-Pulse Oscillators	449
9.6.1	Single-Frequency States	451
9.6.2	Stability of Single-Frequency States	460
9.6.3	The Effects of Shot Noise	474
9.6.4	Linear and Nonlinear Spectral Narrowing	486
9.7	Repetitively Pulsed Oscillators	498
9.7.1	Cavity Detuning	498
9.7.2	Supermodes	501
9.7.3	Spiking Mode and Cavity Detuning	507
9.8	Multidimensional Effects	509
9.9	Storage Ring Free-Electron Lasers	513
9.10	Optical Klystrons	520
	References	523
10	Oscillator Simulation	527
10.1	The General Simulation Procedure	528
10.2	The Optics Propagation Code (OPC)	529
10.3	Cavity Detuning	530
10.4	The Stability of Concentric Resonators	531
10.5	Low-Gain/High- Q Oscillators	532

10.5.1	The Efficiency in the Low-Gain Regime	532
10.5.2	The JLab 10-kW Upgrade Experiment	533
10.6	High-Gain/Low- Q Oscillators	538
10.6.1	The Single-Pass Gain	540
10.6.2	Comparison with a SASE Free-Electron Laser	542
10.6.3	Cavity Detuning	543
10.6.4	The Temporal Evolution of the Pulse: Limit-Cycle Oscillations	544
10.6.5	The Transverse Mode Structure	546
10.6.6	Temporal Coherence	550
	References	554
11	Wiggler Imperfections	555
11.1	The Wiggler Model	556
11.2	The Long-Wavelength Regime	557
11.3	The Short-Wavelength Regime	562
11.4	Summary	564
	References	565
12	X-Ray Free-Electron Lasers and Self-Amplified Spontaneous Emission (SASE)	567
12.1	The Ming Xie Parameterization and the Equivalent Noise Power	568
12.2	Electron Bunch Compression	570
12.3	SASE and MOPA Comparison	571
12.3.1	The Case of a Uniform Wiggler	571
12.3.2	The Case of a Tapered Wiggler	575
12.3.3	Summary	581
12.4	Slippage and Phase Matching Between Wigglers	581
12.4.1	The Phase Match in a Uniform Wiggler Line	582
12.4.2	Optimizing the Phase Match in a Tapered Wiggler Line	588
12.4.3	Phase Shifters	588
12.5	Comparison Between Simulation and Experiments	590
12.5.1	The Linac Coherent Light Source (LCLS)	590
12.5.2	The SPARC Experiment	593
12.6	Enhanced Harmonic Radiation	597
12.7	Resistive Wall Wakefields	604
12.7.1	The Wakefields in a Cylindrical Beam Pipe	604
12.7.2	The Wakefields in a Rectangular Beam Pipe	607
12.7.3	The Energy Variation Within the Bunch	610
12.7.4	An Example: The LCLS	610
	References	611

13	Optical Klystrons and High-Gain Harmonic Generation	615
13.1	The Physical Concept	615
13.2	Comparison Between an Optical Klystron and a Conventional Wiggler	617
13.3	The Multistage Optical Klystron	621
13.4	High-Gain Harmonic Generation	625
13.4.1	Second Harmonic Generation	625
13.4.2	A Harmonic Cascade	627
	References	633
14	Electromagnetic-Wave Wigglers	635
14.1	Single-Particle Trajectories	637
14.2	The Small-Signal Gain	641
14.3	Efficiency Enhancement	647
	References	649
15	Chaos in Free-Electron Lasers	651
15.1	Chaos in Single-Particle Orbits	653
15.1.1	The Equilibrium Configuration	654
15.1.2	The Orbit Equations	655
15.1.3	The Canonical Transformation	656
15.1.4	Integrable Trajectories	657
15.1.5	Chaotic Trajectories	659
15.2	Chaos in Free-Electron Laser Oscillators	661
15.2.1	Return Maps	662
15.2.2	Electron Slippage	664
15.2.3	Pulsed Injection	668
15.2.4	Chaos in Storage Rings	669
	References	671
	Appendix: Electron Beam Optics	673
	Index	699
