# **Atomistic Computer Simulations**

A Practical Guide

WILEY-VCH Verlag GmbH & Co. KGaA

## Contents

Preface *XV*

References *XVI*

Color Plates *XVII*

### Part One The World at the Atomic Scale 1

- 1 Atoms, Molecules and Crystals 3**
  - 1.1 Length- and Timescales 3
  - 1.2 Electrons in an Atom 5
  - 1.3 Local Environment of an Atom 8
    - 1.3.1 Electrons 8
    - 1.3.2 Local Arrangement of Atoms 11
  - 1.4 Most Favorable Arrangement of Atoms 12
    - 1.4.1 The Concept of Total Energy 12
    - 1.4.2 Beyond the Total Energy 13
    - 1.4.3 The Most Stable Configuration 15
  - References 16
- 2 Bonding 17**
  - 2.1 Electronic Ground State 18
  - 2.2 Types of Bonds 18
    - 2.2.1 Covalent Bonding 21
    - 2.2.2 Ionic Bonding 22
    - 2.2.3 Metallic Bonding 24
    - 2.2.4 Hydrogen Bonding 25
    - 2.2.5 Dispersion Bonding 25
  - 2.3 Bond Breaking and Creation 26
  - 2.4 Distortion of Bonds 27
  - References 29
- 3 Chemical Reactions 31**
  - 3.1 Chemical Equations 31
  - 3.2 Reaction Mechanisms 32
  - 3.3 Energetics of Chemical Reactions 33

3.4	Every (Valence) Electron Counts	37
3.5	The Energy Zoo	38
	References	39
<b>4</b>	<b>What Exactly is Calculated?</b>	<b>41</b>
4.1	What Can Be Calculated?	41
4.2	What Actually Happens?	43
4.3	Models and Simulation Cells	44
4.4	Energies	47
4.5	Terms	48
4.6	Liquid Iron: An Example	50
	References	53
<b>Part Two Introducing Equations to Describe the System 55</b>		
<b>5</b>	<b>Total Energy Minimization</b>	<b>57</b>
5.1	The Essential Nature of Minimization	58
5.2	Minimization Algorithms	59
5.2.1	Steepest Descents	61
5.2.2	Conjugate Gradients	62
5.2.3	Quasi-Newton Methods	62
5.2.4	Alternatives	63
5.2.5	Exploring Landscapes	64
5.2.6	Scaling and Computational Cost	66
5.3	Optimize with Success	67
5.3.1	Initial Configuration	67
5.3.2	Initial Forces, Choice of Algorithm and Parameters	68
5.3.3	Fixing Atoms	69
5.3.4	Scaling with System Size	70
5.4	Transition States	71
5.5	Pseudokeywords	72
	References	73
<b>6</b>	<b>Molecular Dynamics and Monte Carlo</b>	<b>75</b>
6.1	Equations of Motion	76
6.2	Time and Timescales	77
6.3	System Preparation and Equilibration	79
6.4	Conserving Temperature, Pressure, Volume or Other Variables	81
6.5	Free Energies	83
6.6	Monte Carlo Approaches	84
6.7	Pseudokeywords for an MD Simulation	86
	References	87
<b>Part Three Describing Interactions Between Atoms 89</b>		
<b>7</b>	<b>Calculating Energies and Forces</b>	<b>91</b>
7.1	Forcefields	92
7.1.1	Reliability and Transferability	95

- 7.2 Electrostatics 97
- 7.3 Electronic and Atomic Motion 98
- 7.3.1 The Born–Oppenheimer Approximation 99
- 7.3.2 Approximating the Electronic Many-Body Problem 100
- 7.4 Electronic Excitations 100
- References 103

## 8 Electronic Structure Methods 105

- 8.1 Hartree–Fock 106
- 8.2 Going Beyond Hartree–Fock 109
- 8.3 Density Functional Theory 111
- 8.4 Beyond DFT 114
- 8.5 Basis Sets 116
- 8.6 Semiempirical Methods 119
- 8.7 Comparing Methods 121
- References 124

## 9 Density Functional Theory in Detail 127

- 9.1 Independent Electrons 127
- 9.2 Exchange–Correlation Functionals 128
- 9.3 Representing the Electrons: Basis Sets 130
- 9.3.1 Plane Waves 131
- 9.3.2 Atomic-Like Orbitals 132
- 9.4 Electron–Nuclear Interaction 133
- 9.4.1 Pseudopotentials 133
- 9.4.2 PAW 136
- 9.4.3 Using All Electrons 136
- 9.5 Solving the Electronic Ground State 136
- 9.5.1 Charge Mixing and Electrostatics 137
- 9.5.2 Metals and Occupancy 139
- 9.6 Boundary Conditions and Reciprocal Space 139
- 9.7 Difficult Problems 141
- 9.8 Pseudokeywords 142
- References 143

## Part Four Setting Up and Running the Calculation 145

### 10 Planning a Project 147

- 10.1 Questions to Consider 147
- 10.1.1 Research Questions 148
- 10.1.2 Simulation Questions 149
- 10.2 Planning Simulations 151
- 10.2.1 Making it Simple 151
- 10.2.2 Planning and Adapting the Sequence of Calculations 151
- 10.3 Being Realistic: Available Resources for the Project 153
- 10.4 Creating Models 155
- 10.5 Choosing a Method 156

10.5.1	Molecular Mechanics and Forcefields	156
10.5.2	Semiempirical Methods	158
10.5.3	DFT	159
10.5.4	Post-HF	160
10.5.5	Post-DFT	161
10.6	Writing About the Simulation	162
10.7	Checklists	163
	References	164
<b>11</b>	<b>Coordinates and Simulation Cell</b>	<b>165</b>
11.1	Isolated Molecules	166
11.1.1	Cartesian Coordinates	166
11.1.2	Molecular Symmetry	167
11.1.3	Internal Coordinates	169
11.2	Periodic Systems	170
11.2.1	Fractional Coordinates	171
11.2.2	Crystallography and Symmetry in Periodic Systems	172
11.2.3	Supercells	175
11.2.4	Understanding Crystallographic Notation: Space Groups	175
11.2.5	Understanding Crystallographic Notation: Atomic Coordinates	176
11.3	Systems with Lower Periodicity	180
11.3.1	Surfaces in Crystallography	180
11.3.2	Grain Boundaries and Dislocations	182
11.3.3	Modeling Surfaces, Wires and Isolated Molecules	182
11.4	Quality of Crystallographic Data	186
11.5	Structure of Proteins	187
11.6	Pseudokeywords	188
11.7	Checklist	189
	References	190
<b>12</b>	<b>The Nuts and Bolts</b>	<b>193</b>
12.1	A Single-Point Simulation	193
12.2	Structure Optimization	194
12.3	Transition State Search	195
12.4	Simulation Cell Optimization	197
12.5	Molecular Dynamics	199
12.6	Vibrational Analysis	200
12.6.1	Simulation of Anharmonic Vibrational Spectra	201
12.6.2	Normal Mode Analysis	202
12.6.3	Harmonic or Anharmonic?	204
12.7	The Atomistic Model	205
12.7.1	Small Beginnings	205
12.7.2	Periodic Images and Duplicate Atoms	205
12.7.3	Crossing (Periodic) Boundaries	206
12.7.4	Hydrogen Atoms in Proteins	207

12.7.5	Solvating a Protein	209
12.8	How Converged is Converged?	209
12.9	Checklists	210
	References	211
<b>13</b>	<b>Tests</b>	<b>213</b>
13.1	What is the Correct Number?	213
13.2	Test Systems	214
13.3	Cluster Models and Isolated Systems	215
13.4	Simulation Cells and Supercells of Periodic Systems	216
13.5	Slab Models of Surfaces	216
13.6	Molecular Dynamics Simulations	217
13.7	Vibrational Analysis by Finite Differences	218
13.8	Electronic-Structure Simulations	219
13.8.1	Basis Sets	219
13.8.2	Pseudopotentials and Projector-Augmented Waves	220
13.8.3	K-Points in Periodic Systems	220
13.9	Integration and FFT Grids	221
13.10	Checklists	222
	References	223
<b>Part Five</b>	<b>Analyzing Results</b>	<b>225</b>
<b>14</b>	<b>Looking at Output Files</b>	<b>227</b>
14.1	Determining What Happened	227
14.1.1	Has it Crashed?	227
14.2	Why Did it Stop?	229
14.2.1	Why it Did Not Converge?	230
14.3	Do the Results Make Sense?	233
14.4	Is the Result Correct?	234
14.5	Checklist	234
	References	234
<b>15</b>	<b>What to do with All the Numbers</b>	<b>235</b>
15.1	Energies	236
15.1.1	Stability	236
15.1.2	Relative Energies: Adsorption, Binding etc.	239
15.1.3	Free Energies	242
15.2	Structural Data	242
15.2.1	Bond Lengths and Angles	243
15.2.2	Distributions	243
15.2.3	Atomic Transport	244
15.2.4	Elastic Constants	246
15.3	Normal Mode Analysis	246
15.3.1	Irreducible Representations	246
15.3.2	Selection Rules from Irreducible Representations	250
15.3.3	Fundamentals, Overtones, and Combination Bands	250

15.4	Other Numbers	251
	References	252
<b>16</b>	<b>Visualization</b>	<b>253</b>
16.1	The Importance Of Visualizing Data	253
16.2	Sanity Checks	253
16.3	Is There a Bond?	254
16.4	Atom Representations	254
16.5	Plotting Properties	256
16.5.1	Looking at Charge Density	256
16.5.2	Density of States	256
16.6	Looking at Vibrations	257
16.7	Conveying Information	258
16.7.1	Selecting the Important Bits	258
16.7.2	From Three to Two Dimensions	258
16.7.3	How to Make Things Look Different	260
16.8	Technical Pitfalls Of Image Preparation	264
16.8.1	JPEG, GIF, PNG, TIFF: Raster Graphics Images	264
16.8.2	Manipulating Raster Graphics Images	265
16.8.3	How to Get a 3D Scene into a 2D Image that Can Be Saved	266
16.9	Ways and Means	266
	References	268
<b>17</b>	<b>Electronic Structure Analysis</b>	<b>269</b>
17.1	Energy Levels and Band Structure	269
17.2	Wavefunctions and Atoms	271
17.3	Localized Functions	273
17.4	Density of States, Projected DOS	274
17.5	STM and CITS	276
17.5.1	Tersoff–Hamann	277
17.5.2	Bardeen	278
17.6	Other Spectroscopies: Optical, X-Ray, NMR, EPR	278
	References	280
<b>18</b>	<b>Comparison to Experiment</b>	<b>283</b>
18.1	Why It Is Important	284
18.2	What Can and Cannot Be Directly Compared	285
18.2.1	Energies	285
18.2.2	Structural Data	286
18.2.3	Spectroscopy	288
18.2.4	Vibrational Spectroscopy	290
18.2.5	Scanning Probes	291
18.2.6	Barriers	292
18.3	How to Determine Whether There is Agreement with Experiment	293
18.4	Case Studies	295
18.4.1	Proton Pumping in Cytochrome c Oxidase	295

18.4.2	Bismuth Nanolines on Silicon	300
	References	304
<b>Appendix A UNIX</b> 307		
A.1	What's in a Name	307
A.2	On the Command Line	308
A.3	Getting Around	309
A.4	Working with Data	309
A.5	Running Programs	311
A.6	Remote Work	312
A.7	Managing Data	313
A.8	Making Life Easier by Storing Preferences	314
A.9	Be Careful What You Wish For	315
<b>Appendix B Scientific Computing</b> 317		
B.1	Compiling	317
B.2	High Performance Computing	319
B.3	MPI and mpirun	320
B.3.1	How to Run an MPI Job	321
B.3.2	Scaling	321
B.3.3	How to Kill a Parallel Job	321
B.4	Job Schedulers and Batch Jobs	322
B.4.1	How to Queue	322
B.4.2	Submitting and Monitoring	323
B.5	File Systems and File Storage	324
B.6	Getting Help	324
	<b>Index</b>	325
