

William W. Parson

Modern Optical Spectroscopy

With Exercises and Examples from
Biophysics and Biochemistry

Second Edition

Springer

Contents

1	Introduction	1
1.1	Overview	1
1.2	The Beer-Lambert Law	3
1.3	Regions of the Electromagnetic Spectrum	4
1.4	Absorption Spectra of Proteins and Nucleic Acids	6
1.5	Absorption Spectra of Mixtures	8
1.6	The Photoelectric Effect	9
1.7	Techniques for Measuring Absorbance	10
1.8	Pump-probe and Photon-Echo Experiments	14
1.9	Linear and Circular Dichroism	15
1.10	Distortions of Absorption Spectra by Light Scattering or Nonuniform Distributions of the Absorbing Molecules	17
1.11	Fluorescence	19
1.12	IR and Raman Spectroscopy	24
1.13	Lasers	25
1.14	Nomenclature	26
	Exercises	27
	References	28
2	Basic Concepts of Quantum Mechanics	31
2.1	Wavefunctions, Operators and Expectation Values	31
2.1.1	Wavefunctions	31
2.1.2	Operators and Expectation Values	32
2.2	The Time-Dependent and Time-Independent Schrödinger Equations	38
2.2.1	Superposition States	44
2.3	Spatial Wavefunctions	45
2.3.1	A Free Particle	45
2.3.2	A Particle in a Box	46
2.3.3	The Harmonic Oscillator	49
2.3.4	Atomic Orbitals	52
2.3.5	Molecular Orbitals	56
2.3.6	Wavefunctions for Large Systems	60
2.4	Spin Wavefunctions and Singlet and Triplet States	62

2.5	Transitions Between States: Time-Dependent Perturbation Theory	70
2.6	Lifetimes of States and the Uncertainty Principle	73
	Exercises	76
	References	77
3	Light	81
3.1	Electromagnetic Fields	81
3.1.1	Electrostatic Forces and Fields	81
3.1.2	Electrostatic Potentials	82
3.1.3	Electromagnetic Radiation	85
3.1.4	Energy Density and Irradiance	92
3.1.5	The Complex Electric Susceptibility and Refractive Index	99
3.1.6	Local-Field Correction Factors	104
3.2	The Black-Body Radiation Law	106
3.3	Linear and Circular Polarization	108
3.4	Quantum Theory of Electromagnetic Radiation	110
3.5	Superposition States and Interference Effects in Quantum Optics	114
3.6	Distribution of Frequencies in Short Pulses of Light	118
	Exercises	120
	References	121
4	Electronic Absorption	123
4.1	Interactions of Electrons with Oscillating Electric Fields	123
4.2	The Rates of Absorption and Stimulated Emission	128
4.3	Transition Dipoles and Dipole Strengths	132
4.4	Calculating Transition Dipoles for π Molecular Orbitals	141
4.5	Molecular Symmetry and Forbidden and Allowed Transitions	143
4.6	Linear Dichroism	160
4.7	Configuration Interactions	164
4.8	Calculating Electric Transition Dipoles with the Gradient Operator	168
4.9	Transition Dipoles for Excitations to Singlet and Triplet States	177
4.10	The Born-Oppenheimer Approximation, Franck-Condon Factors, and the Shapes of Electronic Absorption Bands	179
4.11	Spectroscopic Hole Burning	188
4.12	Effects of the Surroundings on Molecular Transition Energies	191
4.13	The Electronic Stark Effect	199
4.14	Metal-Ligand and Ligand-Metal Charge-Transfer Transitions and Rydberg Transitions	205
4.15	Thermodynamics of Photoexcitation	208
	Exercises	214
	References	216

5	Fluorescence	225
5.1	The Einstein Coefficients	225
5.2	The Stokes Shift	228
5.3	The Mirror-Image Law	230
5.4	The Strickler-Berg Equation and Other Relationships Between Absorption and Fluorescence	233
5.5	Quantum Theory of Absorption and Emission	239
5.6	Fluorescence Yields and Lifetimes	245
5.7	Fluorescent Probes and Tags	256
5.8	Photobleaching	260
5.9	Fluorescence Anisotropy	261
5.10	Single-Molecule Fluorescence and High-Resolution Fluorescence Microscopy	267
5.11	Fluorescence Correlation Spectroscopy	272
5.12	Intersystem Crossing, Phosphorescence, and Delayed Fluorescence	279
	Exercises	282
	References	283
6	Vibrational Absorption	297
6.1	Vibrational Normal Modes and Wavefunctions	297
6.2	Vibrational Excitation	305
6.3	Infrared Spectroscopy of Proteins	312
6.4	Vibrational Stark Effects	315
	Exercises	317
	References	318
7	Resonance Energy Transfer	325
7.1	Introduction	325
7.2	The Förster Theory	327
7.3	Using Energy Transfer to Study Fast Processes in Single Protein Molecules	342
7.4	Exchange Coupling	344
7.5	Energy Transfer to and from Carotenoids in Photosynthesis	346
	Exercises	348
	References	350
8	Exciton Interactions	353
8.1	Stationary States of Systems with Interacting Molecules	353
8.2	Effects of Exciton Interactions on the Absorption Spectra of Oligomers	361
8.3	Transition-Monopole Treatments of Interaction Matrix Elements and Mixing with Charge-Transfer Transitions	367
8.4	Exciton Absorption Band Shapes and Dynamic Localization of Excitations	370
8.5	Exciton States in Photosynthetic Antenna Complexes	373

8.6	Excimers and Exciplexes	376
	Exercises	377
	References	379
9	Circular Dichroism	383
9.1	Magnetic Transition Dipoles and $n\text{-}\pi^*$ Transitions	383
9.2	The Origin of Circular Dichroism	394
9.3	Circular Dichroism of Dimers and Higher Oligomers	400
9.4	Circular Dichroism of Proteins and Nucleic Acids	405
9.5	Magnetic Circular Dichroism	409
	Exercises	412
	References	414
10	Coherence and Dephasing	417
10.1	Oscillations Between Quantum States of an Isolated System . . .	417
10.2	The Density Matrix	421
10.3	The Stochastic Liouville Equation	427
10.4	Effects of Stochastic Relaxations on the Dynamics of Quantum Transitions	429
10.5	A Density-Matrix Treatment of Absorption of Weak, Continuous Light	435
10.6	The Relaxation Matrix	438
10.7	More General Relaxation Functions and Spectral Lineshapes	448
10.8	Anomalous Fluorescence Anisotropy	454
	Exercises	460
	References	461
11	Pump-Probe Spectroscopy, Photon Echoes and Vibrational Wavepackets	463
11.1	First-Order Optical Polarization	463
11.2	Third-Order Optical Polarization and Non-linear Response Functions	472
11.3	Pump-Probe Spectroscopy	477
11.4	Photon Echoes	480
11.5	Two-Dimensional Electronic and Vibrational Spectroscopy . . .	487
11.6	Transient Gratings	490
11.7	Vibrational Wavepackets	493
11.8	Wavepacket Pictures of Spectroscopic Transitions	502
	Exercises	504
	References	506
12	Raman Scattering and Other Multi-photon Processes	513
12.1	Types of Light Scattering	513
12.2	The Kramers-Heisenberg-Dirac Theory	517
12.3	The Wavepacket Picture of Resonance Raman Scattering	526
12.4	Selection Rules for Raman Scattering	528

12.5	Surface-Enhanced Raman Scattering	531
12.6	Biophysical Applications of Raman Spectroscopy	531
12.7	Coherent (Stimulated) Raman Scattering	532
12.8	Multi-photon Absorption	534
12.9	Quasielastic (Dynamic) Light Scattering (Photon Correlation Spectroscopy)	537
	Exercises	541
	References	542
Appendix A	549
A.1	Vectors	549
A.2	Matrices	551
A.3	Fourier Transforms	553
A.4	Phase Shift and Modulation Amplitude in Frequency-Domain Spectroscopy	557
A.5	CGS and SI Units and Abbreviations	560
References	561
Index	563
