

Geomorphologic Atlas of the Antarctic is the first for the Antarctic specialized for subject matter complex of cartographic materials. The maps of the Atlas depict subglacial-and-submarine surface of relief and corresponding geological and geomorphological processes.

The content of the Atlas is determined by innovated data, modern technologies and scientific interpretations. Most of the maps are published for the first time, they make the notions about subglacial relief more accurate and even change them.

The atlas depict not only subglacial relief of Antarctica, but a theory and practical methods of modern stage as well.

The Atlas with this content is published for the first time in the world.
