Contents

1	Genetic exchange: An historical consideration	1
1.1	The evolutionary role of genetic exchange: Divergent viewpoints	1
1.2	Divergence-with-gene-flow: A process by any other name is still introgressive hybridization and sympatric divergence	4
1.3	Hybrid zone studies: Theoretical foundations	6
1.4	Hybrid zone studies: Testing the models	7
1.4.1	Hybrid zones and the form of selection: Voles and spruce trees	7
1.4.2	Hybrid zones and the form of selection: Next-generation sequencing and genome scans in salamanders and butterflies	9
1.4.3	Hybrid zones and the form of selection: A genomic outlook	9
1.5	Adaptive genetic exchange in animals and plants	11
1.5.1	Adaptive trait transfer: Dogs, wolves, and coat color genes	12
1.5.2	Adaptive trait transfer: Louisiana irises	13
1.5.3	Adaptive trait transfer: Darwin's finches	15
1.5.4	Adaptive trait transfer: Senecio and the origin of floral traits	15
1.6	The origin of hybrid taxa in animals and plants	16
1.6.1	The origin of hybrid animal taxa: Swallowtail butterflies	16
1.6.2	The origin of hybrid animal taxa: Sparrows	17
1.6.3	The origin of hybrid animal taxa: Cichlids	18
1.6.4	The origin of hybrid plant taxa: <i>Pinus densata</i>	19
1.6.5	The origin of hybrid plant taxa: Cotton	20
1.7	Genetic exchange between divergent lineages	20
1.7.1	Exchange between divergent lineages: Recombination between viruses and mammals	21
1.7.2	Exchange between divergent lineages: Horizontal gene transfer between bacteria and animals	21
1.7.3	Exchange between divergent lineages: Plant genomes receive foreign genes and genomes	22
1.8	Conclusions	22
2	Genetic exchange and species concepts	24
2.1	Species concepts and genetic exchange: Resolution and conflict avoidance	24
2.2	Genetic exchange and the biological species concept	27
2.3	Genetic exchange and the phylogenetic species concept	28
2.4	Genetic exchange and the cohesion species concept	31

2.5 Genetic exchange and the prokaryotic species concept	32
2.6 Genetic exchange and the genic species concept	33
2.7 Conclusions	34
3 Testing for genetic exchange	35
3.1 Genetic exchange: A testable hypothesis	35
3.2 Testing the hypothesis: Genetic exchange and incomplete lineage sorting	36
3.2.1 Genetic exchange and incomplete lineage sorting: Some analytical approaches	36
3.2.2 Genetic exchange and incomplete lineage sorting: Flycatchers	37
3.2.3 Genetic exchange and incomplete lineage sorting: Alpine lake whitefish	38
3.2.4 Genetic exchange and incomplete lineage sorting: Yeast	38
3.2.5 Genetic exchange and incomplete lineage sorting: Pampas grasses	40
3.2.6 Genetic exchange and incomplete lineage sorting: Orchids	41
3.3 Testing the hypothesis: The fossil record and genetic exchange	41
3.3.1 Genetic exchange detected in the fossil record: Paleopolyploidy in plants	42
3.3.2 Genetic exchange detected in the fossil record: Corals	42
3.3.3 Genetic exchange detected in the fossil record: Land snails	43
3.3.4 Genetic exchange detected in the fossil record: Mammoths	44
3.4 Testing the hypothesis: Contemporary hybrid zones	45
3.4.1 Genetic exchange and hybrid zones: Louisiana irises	45
3.4.2 Genetic exchange and hybrid zones: Eucalyptus	47
3.4.3 Genetic exchange and hybrid zones: Oaks	48
3.4.4 Genetic exchange and hybrid zones: Australian grasshoppers	49
3.4.5 Genetic exchange and hybrid zones: Chickadees	53
3.4.6 Genetic exchange and hybrid zones: House mice	54
3.5 Testing the hypothesis: Intragenomic divergence	55
3.6 Conclusions	57
4 Genetic exchange, reproductive barriers, and the mosaic genome	58
4.1 Genetic exchange and reproductive isolation: Two sides of the same coin	58
4.2 Genetic exchange and reproductive isolation in Louisiana irises: Prezygotic processes	60
4.2.1 Niche differentiation and reproductive isolation	60
4.2.2 Phenology, pollen competition, and reproductive isolation	63
4.2.3 Pollen competition and reproductive isolation	64
4.3 Genetic exchange and reproductive isolation in Louisiana irises: Postzygotic processes	67
4.3.1 Hybrid viability and reproductive isolation	68
4.3.2 Hybrid fertility and reproductive isolation	69
4.4 Genetic exchange and reproductive isolation in viral clades	70
4.4.1 Pre-exchange isolating barriers and viral reassortment: HIV	70
4.4.2 Pre-exchange isolating barriers and viral reassortment: Influenza	71
4.5 Genetic exchange and reproductive isolation in bacterial clades	72
4.5.1 Pre-exchange isolating barriers and HGT: Yersinia	73

4.6 Genetic exchange and postzygotic reproductive isolation in eukaryotes:	
Hybrid viability and fertility	74
4.6.1 Hybrid inviability and introgressive hybridization: <i>Anopheles</i>	75
4.6.2 Hybrid sterility and introgressive hybridization: <i>Helianthus</i>	77
4.7 Conclusions	78
5 Genetic exchange and fitness	79
5.1 Genetic exchange and fitness: Recombinant genotypes are just like everybody else	79
5.2 Genetic exchange and fitness: Environment-independent and -dependent selection on animal hybrids	80
5.2.1 Genetic exchange and hybrid fitness in animals: <i>Drosophila</i>	80
5.2.2 Genetic exchange and hybrid fitness in animals: <i>Tigriopus</i>	84
5.2.3 Genetic exchange and hybrid fitness in animals: <i>Rana</i>	86
5.3 Genetic exchange and fitness: Environment-independent and -dependent selection on plant hybrids	88
5.3.1 Genetic exchange and hybrid fitness in plants: <i>Ipomopsis</i>	89
5.3.2 Genetic exchange and hybrid fitness in plants: <i>Mimulus</i>	91
5.4 Genetic exchange and fitness: Horizontal gene transfer and selection in prokaryotes	92
5.4.1 Horizontal gene transfer and the fitness of bacteria: Theory	93
5.4.2 Horizontal gene transfer and the fitness of bacteria: Experiments	94
5.4.3 Horizontal gene transfer and the fitness of bacteria: <i>Shigella</i>	95
5.4.4 Horizontal gene transfer and the fitness of bacteria: <i>Legionella</i>	96
5.5 Genetic exchange and fitness: Reassortment and selection in viruses	97
5.5.1 Genetic exchange and viral fitness: Polioviruses	98
5.5.2 Genetic exchange and viral fitness: Herpesviruses	100
5.5.3 Genetic exchange and viral fitness: Bacteriophages	100
5.6 Conclusions	102
6 Evolutionary outcomes of genetic exchange	103
6.1 Genetic exchange: Its role in genomic and organismic evolution	103
6.2 Genetic exchange and organismic evolution: Introgression, hybrid speciation, and adaptive radiations in animals	104
6.2.1 Genetic exchange and animal evolution: Divergence-with-introgression	104
6.2.2 Genetic exchange and animal evolution: Homoploid hybrid speciation	109
6.2.3 Genetic exchange and animal evolution: Allopolyploid speciation	114
6.2.4 Genetic exchange and animal evolution: Adaptive radiations	119
6.3 Genetic exchange and organismic evolution: Introgression, hybrid speciation, and adaptive radiations in plants	123
6.3.1 Genetic exchange and plant evolution: Divergence-with-introgression	123
6.3.2 Genetic exchange and plant evolution: Homoploid hybrid speciation	125
6.3.3 Genetic exchange and plant evolution: Allopolyploid speciation	126
6.3.4 Genetic exchange and plant evolution: Adaptive radiations	127
6.4 Conclusions	129

7	Genetic exchange and conservation	130
7.1	Genetic exchange and the conservation and restoration of endangered organisms	130
7.2	Introgressive hybridization and the conservation of endangered animals	132
7.2.1	Introgressive hybridization and the conservation of endangered animals: North American and Asian bears	133
7.2.2	Introgressive hybridization and the conservation of endangered animals: Sharks	134
7.2.3	Introgressive hybridization and the conservation of endangered animals: Felids	135
7.2.4	Introgressive hybridization and the conservation of endangered animals: Trout	137
7.3	Introgressive hybridization and the conservation of endangered plants	138
7.3.1	Introgressive hybridization and the conservation of endangered plants: Poplar	139
7.3.2	Introgressive hybridization and the conservation of endangered plants: Cordgrass	140
7.4	Conclusions	142
8	Genetic exchange and humans	145
8.1	Genetic exchange and the evolution of <i>Homo sapiens</i>	145
8.2	Genetic exchange and the evolution of New World primates: Howler monkeys and marmosets	146
8.2.1	Howler monkeys	146
8.2.2	Marmosets	147
8.3	Genetic exchange and the evolution of Old World primates: Langurs and leaf monkeys	148
8.4	Genetic exchange and the evolution of Old World primates: Baboons	149
8.5	Genetic exchange and the evolution of Old World primates: Gorillas, chimpanzees, and humans	151
8.5.1	Genetic exchange and the evolution of Old World primates: Gorilla × Homo × Pan	152
8.5.2	Genetic exchange and the evolution of Old World primates: Gorilla	154
8.5.3	Genetic exchange and the evolution of Old World primates: Pan	155
8.5.4	Genetic exchange and the evolution of Old World primates: Homo	156
8.6	Genetic exchange and the ecological setting of <i>Homo sapiens</i>	163
8.7	Genetic exchange and the evolution of human food sources	163
8.7.1	Genetic exchange and the evolution of human food sources: Apples	164
8.7.2	Genetic exchange and the evolution of human food sources: Maize	165
8.7.3	Genetic exchange and the evolution of human food sources: Pigs	166
8.7.4	Genetic exchange and the evolution of human food sources: Chickens	167
8.8	Genetic exchange and the evolution of human companions	168
8.8.1	Genetic exchange and the evolution of human companions: Dogs	169
8.8.2	Genetic exchange and the evolution of human companions: Horses	170
8.9	Genetic exchange and the evolution of human drugs	171
8.10	Conclusions	172

9 Epilogue	173
9.1 Genetic exchange is [still] pervasive	173
Glossary	177
