|  |           |
|--|-----------|
| Preface  | ix        |
| <b>1 Selectionism and Mutationism</b>                                      | <b>1</b>  |
| 1.1 Darwin's Theory of Evolution   | 1         |
| 1.2 Criticisms of Darwin's Theory  | 2         |
| 1.3 Evolution by Discontinuous Variation                                   | 3         |
| 1.4 Mutationism  | 6         |
| 1.5 Neo-Darwinism  | 7         |
| 1.6 Neomutationism or Mutation-Driven Evolution                            | 9         |
| 1.7 Survival of the Fittest and Survival of the Niche-Filling Variants     | 9         |
| <b>2 Neo-Darwinism and Panselctionism</b>                                  | <b>13</b> |
| 2.1 Backgrounds  | 13        |
| 2.2 Allele Frequency Changes as the Basic Process of Evolution             | 14        |
| <i>Mutation</i>  | 14        |
| <i>Natural Selection with Constant Fitness</i>                             | 15        |
| <i>Mutation-Selection Balance</i>  | 17        |
| <i>Balanced Polymorphism</i>   | 18        |
| <i>Natural Selection for Multiple Loci</i>                                 | 19        |
| 2.3 Difficulties of Defining and Estimating Selection Coefficients         | 20        |
| <i>Estimates of Selection Coefficients and their Reliability</i>           | 20        |
| <i>Fluctuation of Selection Coefficients</i>                               | 22        |
| <i>General Considerations</i>  | 23        |
| 2.4 Stochastic Changes of Allele Frequencies                               | 24        |
| <i>Probability of Fixation of Mutant Alleles</i>                           | 25        |
| <i>Equilibrium Distribution of Allele Frequencies</i>                      | 25        |
| <i>Effective Population Size and Sampling Errors of Allele Frequencies</i> | 28        |
| <i>Random Errors Caused by Fluctuation of Selection Coefficients</i>       | 29        |
| 2.5 Mutation and Standing Genetic Variation                                | 31        |
| <i>Artificial and Natural Selection in Quantitative Characters</i>         | 31        |
| <i>Evolution of Drug Resistance</i>  | 34        |
| 2.6 Classical and Balance Theories of Maintenance of Genetic Variation     | 34        |
| <i>Genetic Load</i>  | 35        |
| <i>Number of Alleles that can be Maintained in Finite Populations</i>      | 36        |
| 2.7 Natural Selection as a Creative Force                                  | 37        |
| 2.8 Summary  | 39        |

|          |   |           |
|----------|---|-----------|
| <b>3</b> | <b>Evolutionary Theories in the Neo-Darwinian Era</b>                   | <b>41</b> |
| 3.1      | Modifier Genes  | 41        |
|          | <i>Evolution of Dominance</i>   | 42        |
|          | <i>Modification of Linkage Intensity</i>                                | 43        |
| 3.2      | Fisher's Fundamental Theorem of Natural Selection                       | 44        |
| 3.3      | Cost of Natural Selection and Fertility Excess Required                 | 46        |
| 3.4      | Shifting Balance Theory of Evolution                                    | 48        |
| 3.5      | Accumulation of Nonfunctional and Deleterious Mutations                 | 50        |
|          | <i>Y Chromosomes</i>  | 50        |
|          | <i>Nonfunctional Mutations in Duplicate Genes</i>                       | 52        |
|          | <i>Deleterious Mutations and Muller's Ratchet</i>                       | 52        |
| 3.6      | Bottleneck Effects and Genetic Variability                              | 53        |
| 3.7      | Beanbag Genetics and Evolution  | 56        |
| 3.8      | Summary   | 58        |
| <br>     |   |           |
| <b>4</b> | <b>Molecular Evolution</b>  | <b>59</b> |
| 4.1      | Early Studies of Molecular Evolution                                    | 59        |
| 4.2      | Neutral Evolution at the Protein Level                                  | 60        |
|          | <i>Cost of Natural Selection and Neutral Theory</i>                     | 60        |
|          | <i>Definition of Neutral Mutations</i>                                  | 61        |
|          | <i>King and Jukes's View</i>  | 63        |
|          | <i>Definition of Neutral Theory</i>                                     | 64        |
| 4.3      | Molecular Clocks  | 65        |
|          | <i>Evolutionary Rate under Purifying Selection</i>                      | 65        |
|          | <i>Evolutionary Rate and Generation Time</i>                            | 65        |
|          | <i>Functional Constraints of Proteins</i>                               | 66        |
|          | <i>Variation in Mutation Rate</i>                                       | 67        |
|          | <i>Molecular Clocks and Neutral Theory</i>                              | 68        |
| 4.4      | Evolution of Protein-Coding Genes                                       | 69        |
|          | <i>General Properties of Evolution of Protein-Coding Genes</i>          | 69        |
|          | <i>Fast-Evolving Genes</i>  | 70        |
| 4.5      | Protein Polymorphism  | 70        |
| 4.6      | Neutral Evolution at the DNA Level                                      | 72        |
|          | <i>Synonymous and Nonsynonymous Nucleotide Substitutions</i>            | 72        |
|          | <i>Pseudogenes as a Paradigm of Neutral Evolution</i>                   | 72        |
|          | <i>Slightly Deleterious or Nearly Neutral Mutations</i>                 | 73        |
| 4.7      | Advantageous Mutations  | 74        |
|          | <i>Evolution of New Protein Function</i>                                | 74        |
|          | <i>Immune System Genes</i>  | 78        |
|          | <i>Trans-Species Polymorphism</i>                                       | 79        |
| 4.8      | Recent Statistical Studies for Detecting Positive Selection             | 81        |
|          | <i>Bayesian Methods for Identifying Positively-Selected Codon Sites</i> | 81        |
|          | <i>MK Test and its Extensions</i>                                       | 82        |
|          | <i>Extended Haplotype Homozygosity and <math>F_{ST}</math> Tests</i>    | 84        |
|          | <i>Statistical Studies and Biochemical Verification</i>                 | 86        |
|          | <i>Frequency Distributions of Mutant Nucleotides</i>                    | 87        |
| 4.9      | Summary   | 87        |

|          |   |            |
|----------|---|------------|
| <b>5</b> | <b>Gene Duplication, Multigene Families, and Repetitive DNA Sequences</b> | <b>89</b>  |
| 5.1      | New Genes Generated by Gene Duplication                                   | 89         |
|          | <i>Increase in the Number of Genes by Gene Duplication</i>                | 90         |
|          | <i>Genome Size and Number of Genes</i>                                    | 91         |
|          | <i>Gene Numbers and Phenotypic Complexity</i>                             | 92         |
| 5.2      | Evolution of Multigene Families   | 94         |
| 5.3      | Concerted Evolution   | 95         |
|          | <i>Unequal Crossover, Gene Conversion, and Purifying Selection</i>        | 95         |
|          | <i>Tandemly Arrayed Histone Genes</i>                                     | 96         |
| 5.4      | Birth-and-Death Evolution   | 97         |
|          | <i>MHC Genes</i>  | 97         |
|          | <i>Immunoglobulins and other Immune Systems Genes</i>                     | 99         |
|          | <i>Olfactory and other Chemosensory Receptor Genes</i>                    | 101        |
|          | <i>Birth-and-Death Evolution with Strong Purifying Selection</i>          | 102        |
| 5.5      | Multigene Families and Evolution of New Genetic Systems                   | 103        |
|          | <i>Adaptive Immune System</i>   | 103        |
|          | <i>Homeobox Genes Involved in Animal and Plant Development</i>            | 104        |
|          | <i>Multigene Families and Flower Development in Plants</i>                | 105        |
| 5.6      | Genomic Drift and Copy Number Variation                                   | 105        |
| 5.7      | Noncoding DNA and Transposable Genetic Elements                           | 107        |
|          | <i>Exons and Introns</i>  | 108        |
|          | <i>Transposable Genetic Elements</i>                                      | 109        |
|          | <i>Tandem Repetitive Sequences</i>  | 110        |
| 5.8      | Summary   | 110        |
| <br>     |   |            |
| <b>6</b> | <b>Evolution of Phenotypic Characters</b>                                 | <b>113</b> |
| 6.1      | Changing Concepts of the Gene and Gene Expression                         | 113        |
|          | <i>Definition of a Gene</i>   | 113        |
|          | <i>Protein-Coding and Regulatory Regions of Genes</i>                     | 115        |
|          | <i>Gene Regulatory Networks</i>   | 116        |
|          | <i>Small RNAs that Control the Level of Gene Expression</i>               | 116        |
|          | <i>Methylation and Epigenetics</i>  | 117        |
|          | <i>Signaling Pathways and Gene Interaction</i>                            | 118        |
| 6.2      | Evolution of Physiological and Morphological Characters                   | 120        |
|          | <i>Changes in the Protein-Coding Regions of Genes</i>                     | 120        |
|          | <i>Gene Regulation Hypothesis</i>   | 122        |
|          | <i>Major Gene Effect Hypothesis</i>                                       | 126        |
|          | <i>Gene Regulatory Networks and Morphological Evolution</i>               | 128        |
| 6.3      | Evolution of Gene Regulatory Systems                                      | 129        |
|          | <i>Cis-Regulatory Elements</i>  | 129        |
|          | <i>Evolutionary Change of MicroRNAs and other Small RNAs</i>              |            |
|          | <i>Controlling Gene Expression</i>  | 130        |
| 6.4      | Epigenetics and Phenotypic Evolution                                      | 131        |
|          | <i>Environmental Sex Determination</i>                                    | 131        |
|          | <i>Evolution of Temperature-Dependent Sex Determination</i>               | 132        |
|          | <i>Vernalization and Flowering in Plants</i>                              | 132        |

|          |  |            |
|----------|--|------------|
| 6.5      | Gene Co-Option and Horizontal Gene Transfer  | 133        |
|          | <i>Gene Co-Option</i>  | 133        |
|          | <i>Horizontal Gene Transfer</i>  | 134        |
|          | <i>Photosynthetic Animals</i>  | 135        |
| 6.6      | Summary  | 136        |
| <b>7</b> | <b>Mutation and Selection in Speciation</b>  | <b>137</b> |
| 7.1      | Speciation by Chromosomal Mutations  | 138        |
|          | <i>Formation of New Species by Polyploidization</i>                                | 138        |
|          | <i>Changes of Genomic Structures and Speciation</i>                                | 139        |
|          | <i>Chromosomal Rearrangements and Speciation</i>                                   | 140        |
| 7.2      | Evolution of Reproductive Isolation by Genic Mutation                              | 141        |
|          | <i>Oka Model of Speciation by Duplicate Gene Mutations</i>                         | 141        |
|          | <i>Dobzhansky-Muller (DM) Model of Evolution of Reproductive Isolation</i>         | 143        |
|          | <i>Multiallelic Complementary Genes Model</i>                                      | 146        |
|          | <i>Single-Locus Speciation</i>   | 148        |
| 7.3      | Reproductive Isolation by Complex Genetic Systems                                  | 149        |
|          | <i>Segregation Distorters and Speciation</i>                                       | 149        |
|          | <i>Heterochromatin-Associated Hybrid Incapacity</i>                                | 150        |
| 7.4      | Other Mechanisms of Evolution of Reproductive Isolation                            | 150        |
| 7.5      | Speciation by Bottleneck Effects   | 151        |
| 7.6      | Hybrid Sterility Generated by Passive Process of Phenotypic Evolution              | 152        |
| 7.7      | Summary  | 153        |
| <b>8</b> | <b>Adaptation and Evolution</b>  | <b>155</b> |
| 8.1      | Adaptation by Mutation   | 155        |
| 8.2      | Evolution of Some Specific Characters  | 156        |
|          | <i>Evolution of Eyes and Photoreceptors</i>  | 156        |
|          | <i>Evolution of Caste Systems in Honeybees and some other Insects</i>              | 157        |
|          | <i>Evolution of Asymmetric Morphology in Flatfish, Snails, and other Organisms</i> | 161        |
| 8.3      | Regressive Evolution and Pseudogenes   | 162        |
|          | <i>Universality of Vestigial Characters</i>  | 162        |
|          | <i>Molecular Basis of Regressive Evolution</i>                                     | 162        |
|          | <i>Parasitic Organisms and their Genomic Changes</i>                               | 165        |
| 8.4      | Evolution of Sex-Determination Mechanisms  | 166        |
|          | <i>Sex Determination in Vertebrates</i>  | 167        |
|          | <i>Sex Determination in Invertebrates</i>  | 169        |
| 8.5      | Degeneration of the Y (W) Chromosome   | 171        |
|          | <i>Y Degeneration and Dosage Compensation</i>                                      | 171        |
|          | <i>Molecular Basis of X-Chromosome Dosage Compensation</i>                         | 172        |
|          | <i>Evolution by Sexually Antagonistic Mutations</i>                                | 173        |
| 8.6      | Evolution of Behavioral Characters   | 174        |
|          | <i>Selfish Gene Theory of Evolution</i>  | 174        |
|          | <i>Molecular Studies of Behavioral Genes</i>                                       | 175        |
| 8.7      | Summary  | 177        |
